Document Capture Pro / Document Capture

Document Capture Pro is an application that allows you to easily digitize originals such as documents and forms.

You can save scanned images to a specified folder, send by email, and perform copying functions by linking to a printer. You can also split documents by using separation information such as barcodes and automatically process new files. This allows you to streamline the way electronic documents are handled, such as reading large documents and making best use of network capabilities.

Document Capture Pro is for Windows only. For Mac OS, use Document Capture, and for Windows Server, use Document Capture Pro Server.

See the Document Capture Pro help (Windows) or Document Capture (Mac OS) for details on using the application.

If Document Capture Pro is not installed, install the latest software from EPSON Software Updater.

Note:

Document Capture Pro does not support Windows Vista/Windows XP.

Job:

When a scan, save, and send are performed in that order, these operations are known as a job.

By registering a series of operations in advance as a job, you can perform all of the operations by simply selecting the job. By assigning a job to the scanner's control panel, you can start a job from the control panel.

Separation Function:

You can automatically process complicated sorting or organizing by using a variety of detection methods such as blank pages with/without barcodes which are inserted between the originals, or barcodes on the originals.

You can also sort multiple scanned images as separate files and save each file in specific folders by using these methods or by setting specific pages.

Types of Originals that Require Attention

The following types of originals may not be successfully scanned.

- Originals with an uneven surface such as letter head paper.
- Originals with wrinkles or fold lines
- Perforated originals
- Original with labels or stickers (including a glued small piece of paper)
- Carbonless paper
- Curled originals
- Coated paper

Important:

Carbonless paper contains chemical substances that may damage the rollers inside the scanner. Check the following points when scanning originals of carbonless paper.

- Clean the Pickup Roller and the Separation Roller regularly.
- Scanning carbonless paper may reduce the service life of the rollers compared with scanning plain paper.

Note:

- Wrinkled originals may be scanned better if you slow down the feeding speed during scanning or smooth out the wrinkles before loading.
- To scan originals that are easily damaged or wrinkled, use the Carrier Sheet (sold separately).
- To scan originals that are incorrectly detected as double feeds, set the **DFDS Function** to **On** on the control panel before you resume scanning, or select **Off** in **Detect Double Feed** on the **Main Settings** tab in the Epson Scan 2 window. See Document Capture Pro help on how to specify the settings of Epson Scan 2 from Document Capture Pro.
- Labels or stickers must be firmly stuck to the originals with no glue protruding.
- Try to flatten the curled originals before scanning.

Types of Originals that Must Not be Scanned

This section lists the types of originals that must not be scanned

- Photos
- Booklets (thicker than 2 mm (0.08 in.) when closed)
- Non-paper original (such as clear files, fabric, and metal foil)
- Originals with staples or paper clips
- Originals with glue attached
- Ripped originals
- Heavily wrinkled or curled originals
- Originals such as OHP film
- Originals with carbon paper on the back
- Originals with wet ink
- Originals with sticky notes attached

Note:

- You can scan booklets with a total thickness of 2 mm or less at A5 size (A4 in a two-page spread) using  (Manual Feed).
- Do not feed valuable photos, artwork, or important documents, which you do not want to damage or deface, into the scanner directly. Misfeeding may wrinkle or damage the original. When scanning such originals, make sure to use the Carrier Sheet (sold separately).
- Ripped, wrinkled, or curled originals can also be scanned if you use the Carrier Sheet (sold separately).

Note:

- Raise the stopper if the originals fall from the tray.
- Adjust the position of the stopper according to the length of the originals.

Placing Standard Size Originals

This section explains how to place the originals when the paper feeding mode is in Normal Feed as an example.

1. Set the feed selector to  (Normal Feed).

2. Pull out the input tray extension from the input tray and the output tray extension from the output tray to match the length of the original. Raise the stopper if necessary.

Note:

- ❑ To stack the original properly, pull out the output tray and output tray extension so that it is slightly longer than the length of the original.
- ❑ For warped originals, do not pull up the output tray.
- ❑ If thick originals bump into the output tray and fall from it, store the output tray and do not use it. Let the ejected originals stack directly onto the table where the scanner is placed.
- ❑ If scanned images are still affected by ejected originals hitting the table surface the scanner is placed on, move the scanner to the edge of the table where the ejected originals can drop freely, and catch them directly.

3. While holding the tab, slide the edge guides all the way out.

4. Fan the originals.

Hold both ends of the originals and fan them a few times.

5. Align the edges of the originals with the side to be scanned facing down and slide the leading edge into a wedge shape.

6. Load the originals with the side to be scanned facing down and the leading edge directed to the ADF. Insert the originals into the ADF until they meet resistance.

- Adjust the edge guides to fit the originals without any gap. Otherwise, the originals may be fed skewed.

Note:

- To scan originals with punch holes such as loose-leaf paper, load the originals with the holes on the left side, right side, or bottom. There must not be any holes within a 30 mm (1.2 in.) strip at the center of the originals. However, there can be holes within 30 mm (1.2 in.) from the leading edge of the originals. Make sure that the edges of the punch holes do not have burrs or curls.

- If paper jams or double feeds frequently occur when scanning wrinkled paper, try to enable **Slow** to solve this problem. To do this, on the control panel, tap **Settings** > **Scanner Settings** > **Slow** and set it to **On** to slow down the feeding speed.

Placing A3 Size Originals with Fold Lines

This section explains how to place the originals when the paper feeding mode is in Normal Feed as an example.

1. Set the feed selector to  (Normal Feed).

2. Pull out the input tray extension from the input tray and the output tray extension from the output tray to match the length of the original. Raise the stopper if necessary.

Note:

- To stack the original properly, pull out the output tray and output tray extension so that it is slightly longer than the length of the original.
- If thick originals bump into the output tray and fall from it, store the output tray and do not use it. Let the ejected originals stack directly onto the table where the scanner is placed.
- If scanned images are still affected by ejected originals hitting the table surface the scanner is placed on, move the scanner to the edge of the table where the ejected originals can drop freely, and catch them directly.

3. While holding the tab, slide the edge guides all the way out.

4. Follow the instructions below to load originals with a fold.

Note:

Depending on how it is folded and the thickness of the original, it may not be fed correctly. In this case, gently press both sides of the originals with your hands so that the surface does not rise up.

❑ Originals creased in the middle

When Normal Feed is selected and the scanner is in the Normal Feed Position, you can scan up to 60 sheets of A3 paper with a thickness of 80 g/m².

❑ Originals with a bound fold

When Normal Feed is selected and the scanner is in the Normal Feed Position, you can scan up to 10 sheets of A3 paper with a thickness of 80 g/m².

Note:

Originals with a hard fold line may not be fed properly. Spread such originals in advance so that the height of the fold is 15 mm or less.

Insert the paper into the ADF until it meets resistance.

5. Adjust the edge guides to fit the originals without any gap.
Otherwise, the originals may be fed skewed.

Placing Long Paper

1. Set the feed selector to  (Manual Feed).

2. Open the input tray and the output tray.

Caution:

Do not raise the stopper.

3. While holding the tab, slide the edge guides all the way out.

4. Load the original straight into the input tray with the side to be scanned facing down and its leading edge directed to the ADF.

Insert the original into the ADF until it meets resistance.

5. Adjust the edge guides to fit the original without any gap. Otherwise, the original may be fed skewed.

Note:

- ❑ You can scan various long paper in the following resolutions.

Approx. 5,461 mm (215 in.) or less: up to 300 dpi
Approx. 5,588 mm (220 in.) or less: up to 200 dpi
- ❑ You need to specify the size of the long paper original in Epson Scan 2. Open the Epson Scan 2 window.
You can specify the paper size of the long paper in the following three ways:
 - If the paper length is 3,048 mm (120 in.) or less, you can select **Auto Detect (Long Paper)** to detect the size automatically.
 - If the paper length exceeds 3,048 mm (120 in.), select **Customize** and specify the length and the width.
 - If the paper length is 5,461 mm (215 in.) or less, you can select **Detect paper length** to detect only the length automatically. If the paper is longer than 5,461 mm (215 in.), specify both the length and the width of the paper.See Document Capture Pro help on how to specify the settings of Epson Scan 2 from Document Capture Pro.
- ❑ The scanning speed for long paper is slowed down automatically.
- ❑ Support the long paper at both ends with your hands to prevent it from falling off the ADF or being stacked and jammed or dropped from the output tray.

Placing Large Size Originals

Large size originals refer to originals of a size larger than A3 and equal to or smaller than A2.

1. Set the feed selector to  (Manual Feed).

2. Pull out the input tray extension from the input tray and the output tray extension from the output tray to match the length of the original. Raise the stopper if necessary.

3. While holding the tab, slide the edge guides all the way out.

4. Firmly fold the original in half so that the side to be scanned is facing out.

5. Load the original in the input tray with the second page facing up and the leading edge directed to the ADF. Insert it into the ADF until it meets resistance.

6. Adjust the edge guides to fit the originals without any gap. Otherwise, the originals may be fed skewed.

Note:

- ❑ When scanning large originals, gently press the original near the top of the edge guide with your fingers so that it is not fed askew.
- ❑ Select **Large Originals** from **Scan Settings** in Epson Scan 2.
- ❑ To scan both sizes of the original and combine the scanned images, specify the necessary settings in Epson Scan 2 window.

Open the Epson Scan 2 window. Select **Double-Sided** from **Scanning Side**, and select **Left & Right** from **Stitch Images**. See the Epson Scan 2 help for details. See Document Capture Pro help on how to specify the settings of Epson Scan 2 from Document Capture Pro.

Insert the envelope into the ADF until it meets resistance.

! **Important:**

Do not load envelopes with adhesives on them.

Note:

- Envelopes that are not cut cleanly at the flap edge when opened may not be scanned correctly.*
- Envelopes that have not yet been sealed can be loaded with the flap open and facing up.*

5. Align the edge guides with the envelopes.
Otherwise, the envelopes may be fed skewed.

Placing a Mixture of Originals at Different Sizes

You can load mixed-sized originals at a time to scan. You can also load a mixture of paper types and thickness.

Important:

- ❑ When placing and scanning originals that are a mixture of different sizes, originals may be fed askew because not all of the originals are supported by the edge guides.
- ❑ Originals may be jammed or fed askew if you set different types or very different sizes of originals, such as in the following cases.
 - Thin paper and thick paper
 - A3 or A4 size paper and card size paper
 - Thin paper and plastic cardsIf originals are fed askew, check any problem in the scanned images.

Note:

- ❑ If originals are jammed or not fed correctly, try to enable **Slow** to solve this problem.
- ❑ Alternatively, you can scan originals of different paper sizes and types by loading them one by one using **Automatic Feeding Mode**.

1. Set the feed selector to  (Normal Feed).

2. Extend the input tray extension. Pull out the output tray and output tray extension, and then raise the stopper.

Note:

If any thick originals are contained, store the output tray and do not use it. Let the ejected originals to stack directly onto the table where the scanner is placed. This prevents the originals from bumping into the output tray and falling down.

3. While holding the tab, slide the edge guides all the way out.

4. Load the originals at the center of the input tray in descending order of paper size with the widest at the back and the narrowest at the front.

! Important:

Check the following points when setting different sizes of originals.

- Insert the originals into the ADF with their leading edges aligned securely until they meet resistance.
- Set the originals at the center of the input tray. Refer to the ▲ mark on the scanner as your guide.
- Set the originals straight.

If not, originals may be fed askew or jammed.

Note:

Load the originals into the ADF with the side to be scanned facing down and the leading edges slightly displaced at an angle.

5. Align the edge guides with the widest original.

Scanning Speed Slows Down when Scanning Continuously

When scanning continuously using the ADF, scanning slows down to prevent the scanner mechanism from overheating and being damaged. However, you can continue scanning.

To regain normal scanning speed, leave the scanner idle for at least 30 minutes. Scanning speed does not recover even if the power is off.

Scanning Takes a Long Time

- Scanning may take some time depending on the resolution setting, file type setting, or other scan settings you set in the scanning application.
- Computers with USB 3.0 (SuperSpeed) or USB 2.0 (Hi-Speed) ports can scan faster than those with USB 1.1 ports. If you are using a USB 3.0 or USB 2.0 port with the scanner, make sure it meets the system requirements.

- When using security software, exclude the TWAIN.log file from monitoring, or set the TWAIN.log as a read-only file. For more information on your security software's functions, see the help and so on supplied with the software. The TWAIN.log file is saved in the following locations.
 - Windows 10/Windows 8.1/ Windows 8/ Windows 7/ Windows Vista:
