*Instructions containing useful tips and restrictions on printer operation.*

**Related Information**

➡ Clicking this icon takes you to related information.

## Descriptions Used in this Manual

❏ Screenshots of the printer driver and the Epson Scan 2 (scanner driver) screens are from Windows 10 or OS X Mojave. The content displayed on the screens varies depending on the model and situation.

❏ Illustrations used in this manual are examples only. Although there may be slight differences depending on the model, the method of operation is the same.

❏ Some of the menu items on the LCD screen vary depending on the model and settings.

❏ You can read the QR code using dedicated app.

## Operating System References

**Windows**

In this manual, terms such as "Windows 10", "Windows 8.1", "Windows 8", "Windows 7", "Windows Vista", "Windows XP", "Windows Server 2019","Windows Server 2016", "Windows Server 2012 R2", "Windows Server 2012", "Windows Server 2008 R2", "Windows Server 2008", "Windows Server 2003 R2", and "Windows Server 2003" refer to the following operating systems. Additionally, "Windows" is used to refer to all versions.

❏ Microsoft® Windows® 10 operating system

❏ Microsoft® Windows® 8.1 operating system

❏ Microsoft® Windows® 8 operating system

❏ Microsoft® Windows® 7 operating system

❏ Microsoft® Windows Vista® operating system

❏ Microsoft® Windows® XP operating system

**About this Manual**

❏ Microsoft® Windows® XP Professional x64 Edition operating system

❏ Microsoft® Windows Server® 2019 operating system

❏ Microsoft® Windows Server® 2016 operating system

❏ Microsoft® Windows Server® 2012 R2 operating system

❏ Microsoft® Windows Server® 2012 operating system

❏ Microsoft® Windows Server® 2008 R2 operating system

❏ Microsoft® Windows Server® 2008 operating system

❏ Microsoft® Windows Server® 2003 R2 operating system

❏ Microsoft® Windows Server® 2003 operating system

**Mac OS**

In this manual, "Mac OS" is used to refer to macOS Mojave, macOS High Sierra, macOS Sierra, OS X El Capitan, OS X Yosemite, OS X Mavericks, OS X Mountain Lion, Mac OS X v10.7.x, and Mac OS X v10.6.8.

# Introduction

This is a common manual for the administrator to use and manage the multi-function printer.

There are unavailable functions and unshown menus because this is a common manual. Therefore, information is given near setting items or menus.

See the *User's Guide* for function usage information.

## Manual Component

### Printer Settings and Managing

Explains the flow from network connection, to setting each function, to managing the printer.

### Connection

Explains how to connect a device to the network. Also explains the using port of the printer, DNS server, and proxy server.

### Function Settings

Explains the settings for each function, such as printing and scanning.

### Product Security Settings

Explains the basic security settings, such as administrator password setting and access control.

### Operation and Management Settings

Explains the operations and management after beginning use of the printer, such as checking the printer's information and the notification settings when an event is occurring.

### Solving Problems

Explains settings initialization and troubleshooting of the network.

### Advanced Security Settings for Enterprise

Explains the advanced security settings used on the network, such as SSL/TLS communication and IPsec / IP filtering.

## Terms Used in this Guide

### Terms

The following terms are used in this guide.

**Introduction**

### Administrator

The person in charge of installing and setting the device or the network at an office or organization. For small organizations, this person may be in charge of both device and network administration. For large organizations, administrators have authority over the network or devices on the group unit of a department or division, and network administrators are in charge of the communication settings for beyond the organization, such as the Internet.

### Network administrator

The person in charge of controlling network communication. The person who set up the router, proxy server, DNS server and mail server to control communication through the Internet or network.

### User

The person who uses devices such as printers or scanners.

### Server / client connection (printer sharing using the Windows server)

The connection that indicates the printer is connected to the Windows server through the network or by USB cable, and the print queue set on the server can be shared. Communication between the printer and the computer goes through the server, and the printer is controlled on the server.

### Peer to peer connection (direct printing)

The connection that indicates the printer and the computer are connected to the network through the hub or access point, and the print job can be executed directly from the computer.

### Web Config(device's web page)

The web server that is built into the device. It is called Web Config. You can check and change the device's status on it using the browser.

### Print queue

For Windows, the icon for each port displayed on **Device and Printer** such as a printer. Two or more icons are created even for a single device if the device is connected to the network by two or more ports, such as standard TCP/IP and WSD network.

### Tool

A generic term for Epson software to set up or manage a device, such as Epson Device Admin, EpsonNet Config, EpsonNet SetupManager, etc.

### Push scan

A generic term for scanning from the device's control panel. By using this function, the scanning result is saved to a folder, attached to an email, or saved to a cloud service.

### ASCII (American Standard Code for Information Interchange)

One of the standard character codes. 128 characters are defined, including such characters as the alphabet (a-z, A-Z), Arabic numbers (0-9), symbols, blank characters, and control characters. When "ASCII" is described in this guide, it indicates the 0x20 - 0x7E (hex number) listed below, and does not involve control characters.

| | 00 | 01 | 02 | 03 | 04 | 05 | 06 | 07 | 08 | 09 | 0A | 0B | 0C | 0D | 0E | 0F |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 20 | SP* | ! | " | # | $ | % | & | ' | ( | ) | * | + | , | - | . | / |
| 30 | 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | : | ; | < | = | > | ? |
| 40 | @ | A | B | C | D | E | F | G | H | I | J | K | L | M | N | O |
| 50 | P | Q | R | S | T | U | V | W | X | Y | Z | [ | \ | ] | ^ | _ |
| 60 | ` | a | b | c | d | e | f | g | h | i | j | k | l | m | n | o |
| 70 | p | q | r | s | t | u | v | w | x | y | z | { | | | } | ~ | |

\*      Space character.

### Unicode (UTF-8)

An international standard code, covering the major global languages. When "UTF-8" is described in this guide, it indicates coding characters in UTF-8 format.

# Example of Network Environment

This is an example of the network environment connection products. Functions and services that are not available in your product may be included.

## Example of Medium to Large Office Network Environment

**(A): Internet**

The following services are available if the printer is able to connect to the Internet.

❏ Epson Connect

   Email Print, Remote Print, etc.

❏ Cloud Services

   Google Cloud Print, Evernote etc.

❏ Site of Epson

   Downloading the driver and software and updating the printer's firmware, etc.

**Introduction**

**(B): DMZ (demilitarized zone)**

This zone is placed between the internal network (intranet) and the external network (internet), and both networks are segments isolated by the firewall. It is common to put the server that is opened for the external network. It is able to protect diffusion of an external threat to the internal network. Also, it is able to protect against unauthorized access from the internal network to the server that is opened.

❏ DNS server

❏ Proxy server

❏ Email transfer server

❏ Web server

❏ FTP server

**(C): Trust Zone (Intranet)**

This is a trust network that is protected by the firewall or UTM (Unified Threat Management).

❏ (C)-1: Server inside of the intranet

This server applies each service to the organization's computers.

❏ DNS server

❏ DHCP server

❏ Email server

❏ Active Directory server / LDAP server

❏ File server

❏ (C)-2: Application server

This server applies the function of the server application as follows.

❏ Epson Print Admin

❏ Document Capture Pro Server

❏ (C)-3: Wired LAN (Ethernet), (C)-4: Wireless LAN (Wi-Fi)

Connect printers, scanners, computers, etc. to the LAN by using a LAN cable or radio wave.

**(D): Other branch**

This is the other branch network. It is connected by the Internet, leased line, etc.

**Network devices**

❏ a: Firewall, UTM

❏ b: Router

❏ c: LAN switch

❏ d: Wireless LAN controller

❏ e: Access point

## Example of Small Office Network

**(A): Internet**

❏ Epson Connect

❏ Cloud services

❏ Email server, FTP server

**(B): Trust Zone (Intranet)**

❏ (B)-1: Wired LAN (Ethernet)

❏ (B)-2: Wireless LAN (Wi-Fi)

# Printer Connection Types

The following two methods are available for the printer's network connection.

❏ Server / client connection (printer sharing using the Windows server)

❏ Peer to peer connection (direct printing)

## Server / Client Connection Settings

This is the connection that the server computer shares with the printer. To prohibit the connection without going through the server computer, you can enhance the security.

**Introduction**

When using USB, the printer without the network function can be also shared.

**Connection method:**

Connect the printer to the network via LAN switch or access point.

You can also connect the printer to the server directly by USB cable.

**Printer driver:**

Install the printer driver on the Windows server depending on the OS of the client computers.

By accessing the Windows server and linking the printer, the printer driver is installed on the client computer and can be used.

**Features:**

❏ Manage the printer and the printer driver in batch.

❏ Depending on the server spec, it may take time to start the print job because all print jobs go through the print server.

❏ You cannot print when the Windows server is turned off.

**Related Information**

➡

## Peer to Peer Connection Settings

This is the connection to connect the printer on the network and the computer directly. Only a network-capable model can be connected.

**Connection method:**

Connect the printer to the network directly via hub or access point.

**Printer driver:**

Install the printer driver on each client computer.

When using EpsonNet SetupManager, you can provide the driver's package that includes the printer settings.

**Features:**

❏ The print job starts immediately because the print job is sent to the printer directly.

❏ You can print as long as the printer runs.

**Related Information**

➡

# Printer Settings and Management

## Flow of the Printer Settings and Management

| A | Network Connection for the Printer | B | Print function Setting |
|---|---|---|---|
| C | Server and Shared folder Setting | D | Contacts Setting |
| E | Scan Setting | F | Security Settings |
| G | Operation and Management Settings | | |

## Network Connection for the Printer

Set the IP address to the printer and connect it to the network.

❏ IP address setting

❏ Connecting to the network (LAN cable connection / Wi-Fi settings)

**Related Information**

➡ "Network Connection" on page 19

# Print Function Setting

Make setting to enable print function.

❏ Print settings for Server / Client Connection

❏ Print settings for Peer to Peer Connection

**Related Information**

➡ "Using the Print Functions" on page 31

# Server and Shared Folder Setting

Make the mail server setting for email forwarding or email notification, and make the FTP server and shared folder setting for sharing folder or FTP transferring.

Also when you want to synchronize the contacts to the LDAP server, make the LDAP server setting.

❏ Mail server setting

❏ File server setting (shared folder setting)

❏ FTP server setting

❏ LDAP server setting

**Related Information**

➡ "Setting the Server or the Shared Folder" on page 40

# Contacts Setting

Make the destination setting for scanning.

❏ Import

❏ Registering the contacts

**Related Information**

➡ "Using Contacts" on page 62

# Scan Setting

Make setting to enable scan function.

❏ Driver setting

**Printer Settings and Management**

❏ Network setting

# Network Connection

This chapter explains the procedure to connect the printer to the network.

## Before Making Network Connection

To connect to the network, check the connection method and setting information for connection in advance.

### Gathering Information on the Connection Setting

Prepare the necessary setting information to connect. Check the following information in advance.

| Divisions | Items | Note |
|---|---|---|
| Device connection method | ❏ Ethernet<br>❏ Wi-Fi | Decide how to connect the printer to the network.<br>For Wired LAN, connects to the LAN switch.<br>For Wi-Fi, connects to the network (SSID) of the access point. |
| LAN connection information | ❏ IP address<br>❏ Subnet mask<br>❏ Default gateway | Decide the IP address to assign to the printer.<br>When you assign the IP address statically, all values are required.<br>When you assign the IP address dynamically using the DHCP function, this information is not required because it is set automatically. |
| Wi-Fi connection information | ❏ SSID<br>❏ Password | These are the SSID (network name) and the password of the access point that the printer connects to.<br>If MAC address filtering has been set, register the MAC address of the printer in advance to register the printer.<br>For the supported standards, see the User's Guide. |
| DNS server information | ❏ IP address for primary DNS<br>❏ IP address for secondary DNS | These are required when assigning a static IP address to the printer. The secondary DNS is set when the system has a redundant configuration and there is a secondary DNS server.<br>If you are in a small organization and do not set the DNS server, set the IP address of the router. |
| Proxy server information | ❏ Proxy server name | Set this when your network environment uses the proxy server to access the internet from the intranet, and you use the function that the printer directly accesses to the internet.<br>For the following functions, the printer directly connects to the internet .<br>❏ Epson Connect Services<br>❏ Cloud services of other companies<br>❏ Firmware updating |
| Port number information | ❏ Port number to release | Check the port number used by the printer and computer, then release the port that is blocked by a firewall, if necessary.<br>For the port number used by the printer, see the Appendix. |

# IP Address Assignment

These are the following types of IP address assignment.

**Static IP address:**

Assign the predetermined IP address to the printer (host) manually.

The information to connect to the network (subnet mask, default gateway, DNS server and so on) need to be set manually.

The IP address does not change even when the device is turned off, so this is useful when you want to manage devices with an environment where you cannot change the IP address or you want to manage devices using the IP address. We recommend settings to the printer, server, etc. that many computers access. Also, when using security features such as IPsec / IP filtering, assign a fixed IP address so that the IP address does not change.

**Automatic assignment by using DHCP function (dynamic IP address):**

Assign the IP address automatically to the printer (host) by using the DHCP function of the DHCP server or router.

The information to connect to the network (subnet mask, default gateway, DNS server and so on) is set automatically, so you can easily connect the device to the network.

If the device or the router is turned off, or depending on the DHCP server settings, IP address may change when re-connecting.

We recommend managing devices other than the IP address and communicating with protocols that can follow the IP address.

*Note:*
*When you use the IP address reservation function of the DHCP, you can assign the same IP address to the devices at any time.*

# DNS Server and Proxy Server

The DNS server has a host name, domain name of the email address, etc. in association with the IP address information.

Communication is impossible if the other party is described by host name, domain name, etc. when the computer or the printer performs IP communication.

Queries the DNS server for that information and gets the IP address of the other party. This process is called name resolution.

Therefore, the devices such as computers and printers can communicate using the IP address.

Name resolution is necessary for the printer to communicate using the email function or Internet connection function.

When you use those functions, make the DNS server settings.

When you assign the printer's IP address by using the DHCP function of the DHCP server or router, it is automatically set.

The proxy server is placed at the gateway between the network and the Internet, and it communicates to the computer, printer, and Internet (opposite server) on behalf of each of them. The opposite server communicates only to the proxy server. Therefore, printer information such as the IP address and port number cannot be read and increased security is expected.

When you connect to the Internet via a proxy server, configure the proxy server on the printer.

# Connecting to the Network from the Control Panel

Connect the printer to the network by using the printer's control panel.

For the printer's control panel, see the *User's Guide* for more details.

## Assigning the IP Address

Set up the basic items such as Host Address, Subnet Mask, and Default Gateway.

This section explains the procedure for setting a static IP address.

1. Turn on the printer.

2. Select **Settings** on the home screen on the printer's control panel.

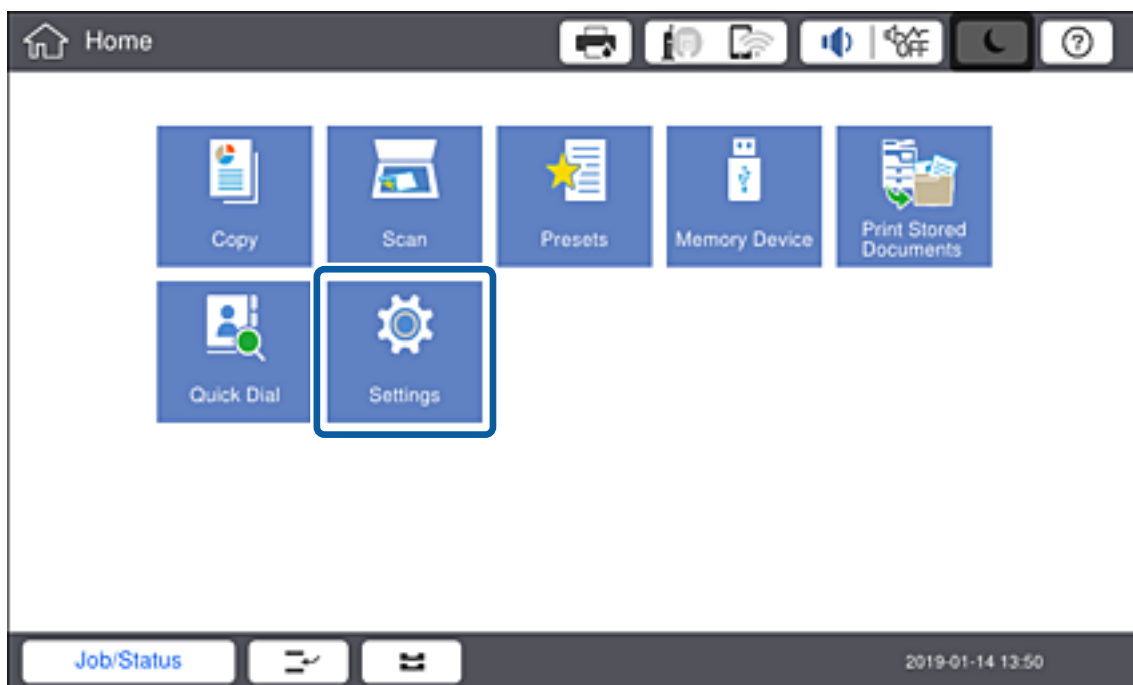

3. Select **General Settings** > **Network Settings** > **Advanced**.

4. Select **TCP/IP**.

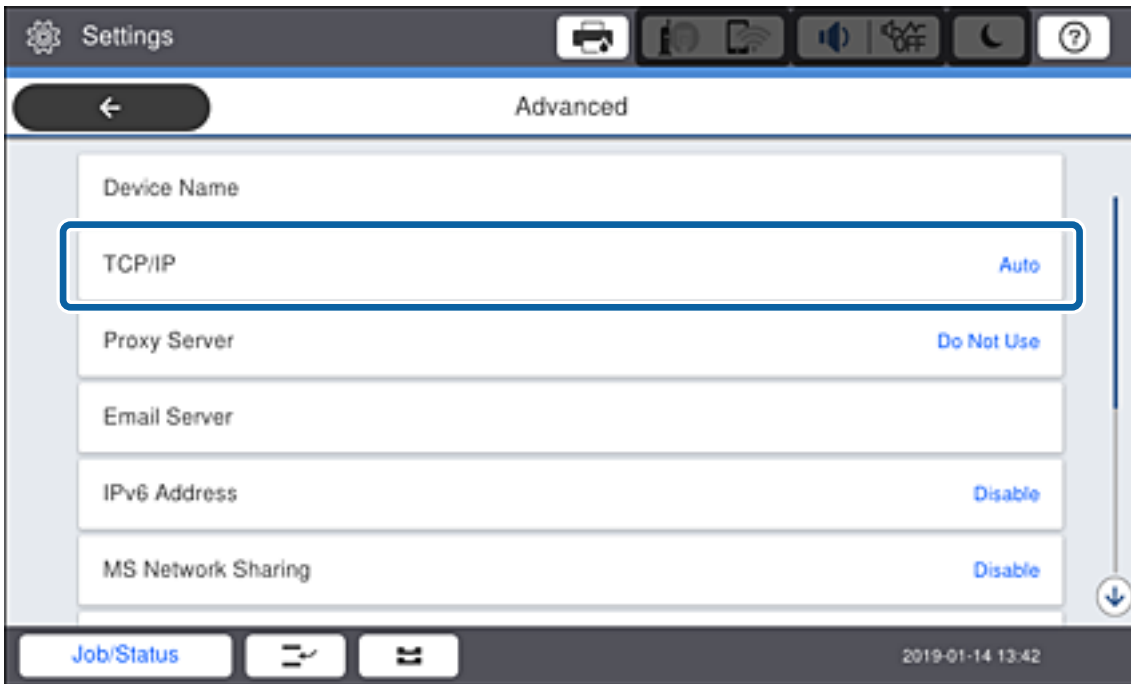

5. Select **Manual** for **Obtain IP Address**.

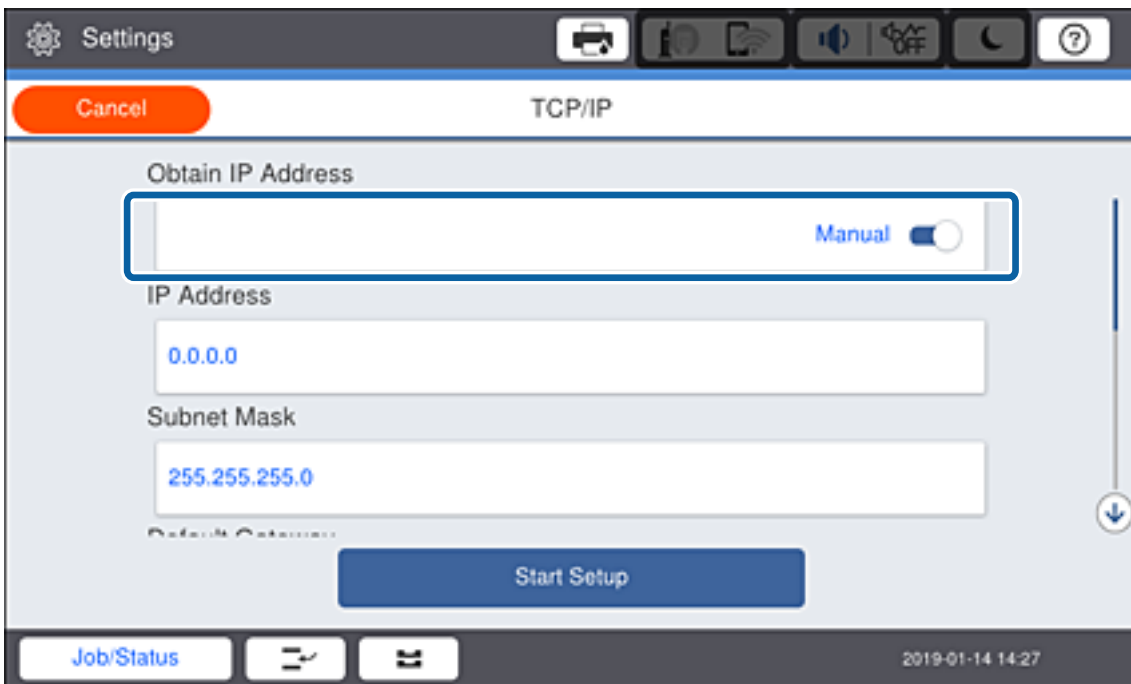

*Note:*
*When you set the IP address automatically by using the DHCP function of router, select **Auto**. In that case, the **IP Address**, **Subnet Mask**, and **Default Gateway** on step 6 to 7 are also set automatically, so go to step 8.*

6. Enter the IP address.

   When entering an IP Address, enter zeroes (0) to make three digits as shown in the following example.

   Example:

❏ If the IP address is 192.0.2.111, enter 192.000.002.111.

❏ If the IP address is 192.0.12.10, enter 192.000.012.010
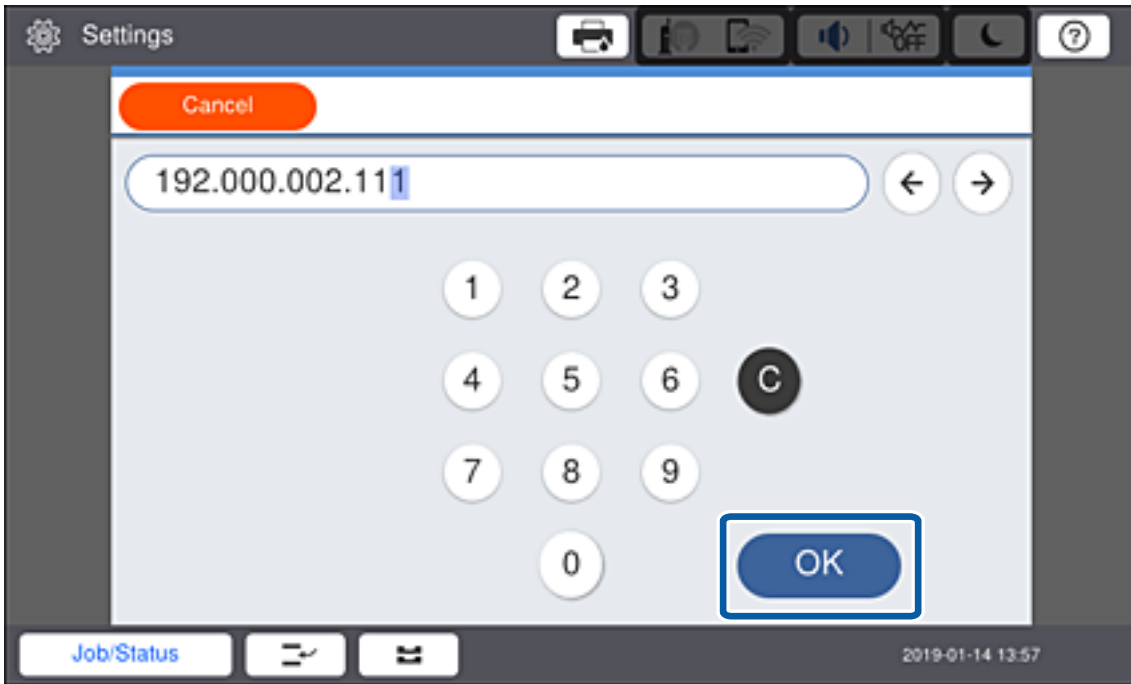

Confirm the value reflected on the previous screen. After the IP address is entered, the zeroes you entered to make three digiits are omitted.

7.  Set up the **Subnet Mask** and **Default Gateway**.

    Confirm the value reflected on the previous screen.

    *Note:*
    *If the combination of the IP Address, Subnet Mask and Default Gateway is incorrect, **Start Setup** is inactive and cannot proceed with the settings. Confirm that there is no error in the entry.*

8.  Enter the IP address for the primary DNS server.

    Confirm the value reflected on the previous screen.

    *Note:*
    *When you select **Auto** for the IP address assignment settings, you can select the DNS server settings from **Manual** or **Auto**. If you cannot obtain the DNS server address automatically, select **Manual** and enter the DNS server address. Then, enter the secondary DNS server address directly. If you select **Auto**, go to step 10.*

9.  Enter the IP address for the secondary DNS server.

    Confirm the value reflected on the previous screen.

10. Tap **Start Setup**.

11. Close the confirmation screen.

## Setting the Proxy Server

Set up the proxy server if both of the following are true.

**Network Connection**

❏ The proxy server is built for Internet connection.

❏ When using a function in which a printer directly connects to the Internet, such as Epson Connect service or another company's cloud services.

1. Select **Settings** on the home screen.

   *Note:*
   *When making settings after IP address setting, the* ***Advanced*** *screen is displayed. Go to step 3.*

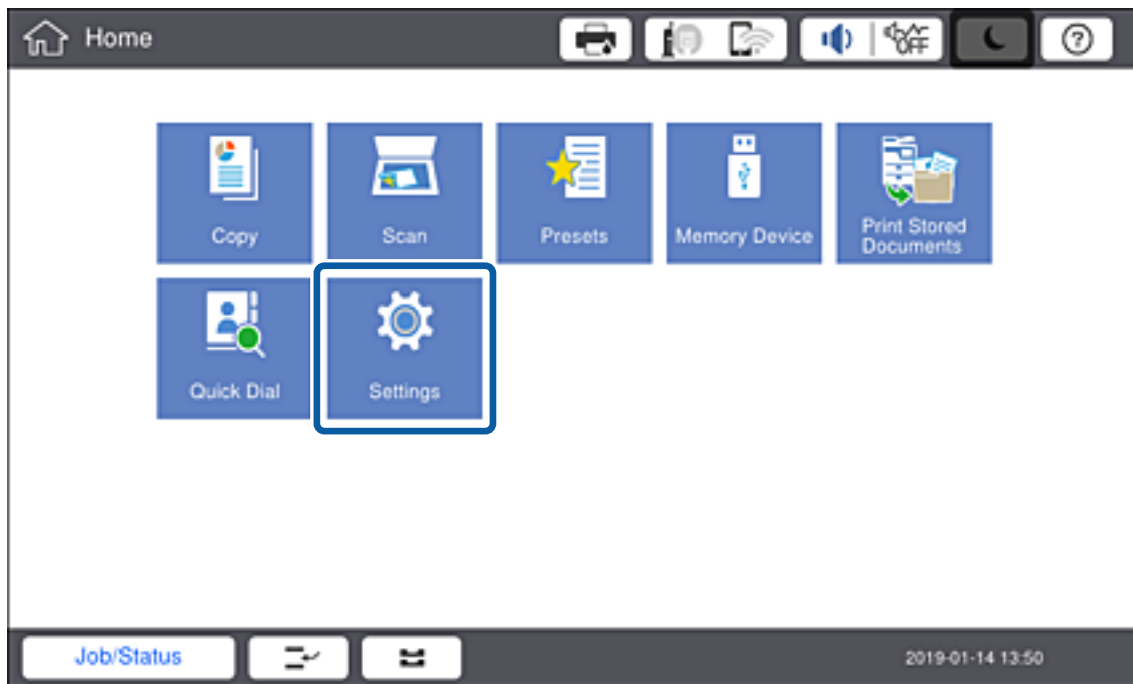

2. Select **General Settings** > **Network Settings** > **Advanced**.

3. Select **Proxy Server**.
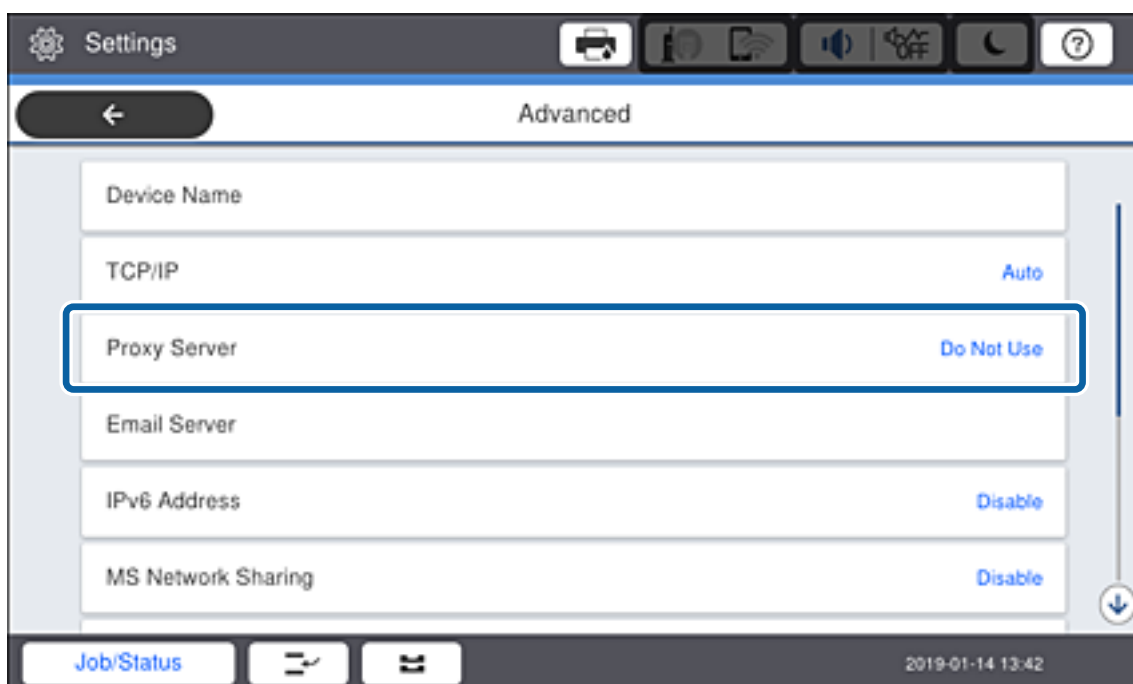

4. Select **Use** for **Proxy Server Settings**.

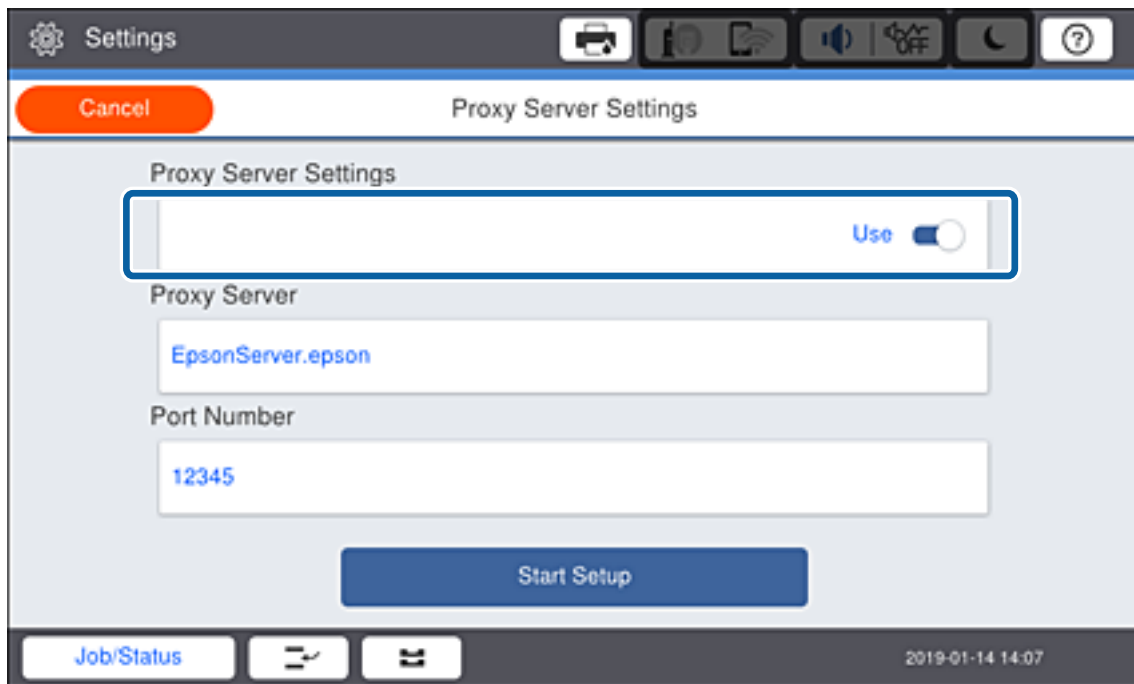

5. Enter the address for the proxy server by IPv4 or FQDN format.

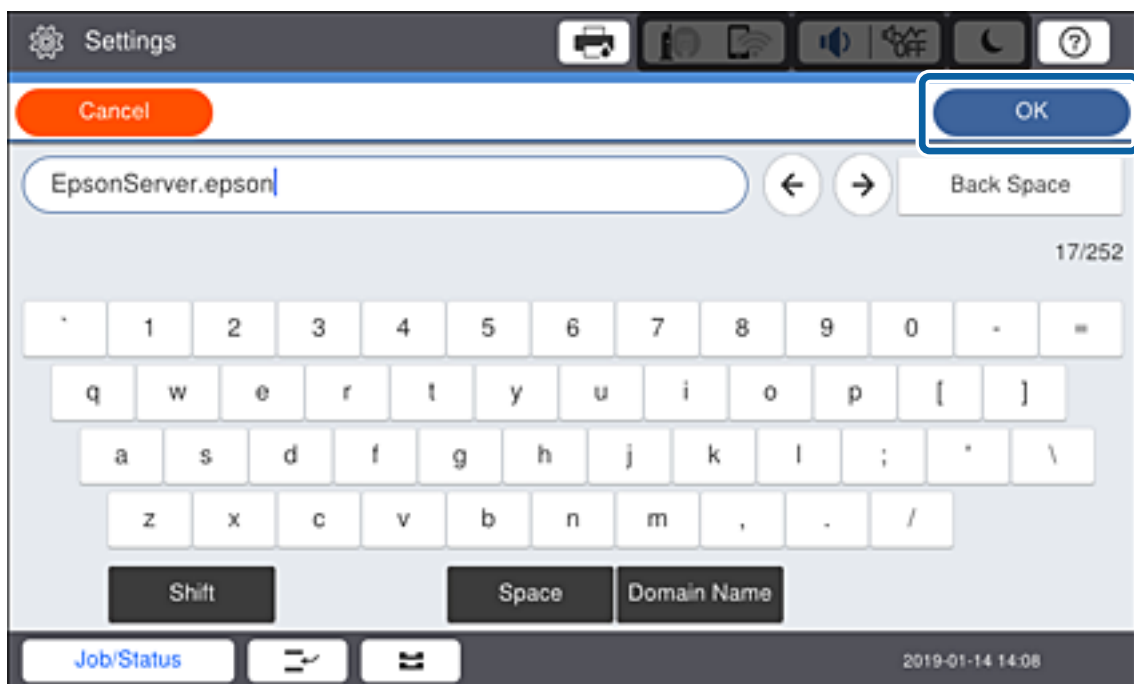

Confirm the value reflected on the previous screen.

6. Enter the port number for the proxy server.

Confirm the value reflected on the previous screen.

7. Tap **Start Setup**.

8. Close the confirmation screen.

# Connecting to LAN

Connect the printer to the network by Ethernet or Wi-Fi.

**Related Information**

➡
➡

## Connecting to Ethernet

Connect the printer to the network by using the Ethernet cable, and check the connection.

1. Connect the printer and hub (LAN switch) by Ethernet cable.

2. Select **Settings** on the home screen.

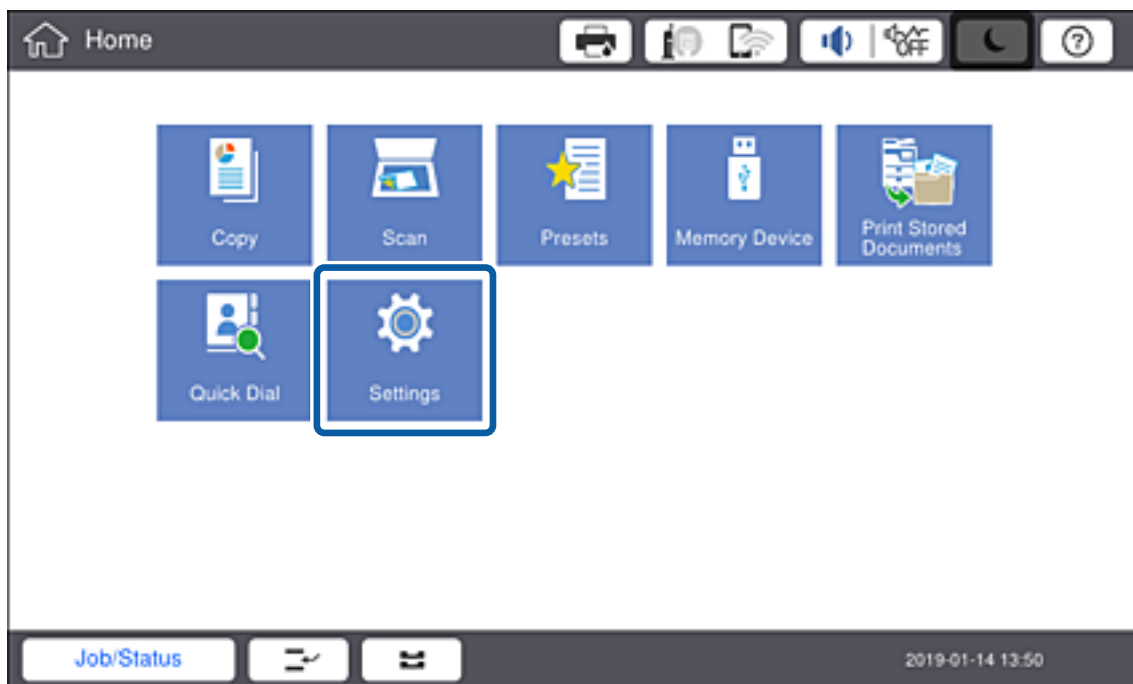

3. Select **General Settings** > **Network Settings**.

4. Select **Connection Check**.

   The connection diagnosis result is displayed. Confirm the connection is correct.

5. Tap **OK** to finish.

   When you tap **Print Check Report**, you can print the diagnosis result. Follow the on-screen instructions to print it.

# Making Wi-Fi Settings Manually from the Control Panel

You can manually set up the information necessary to connect to an access point from the printer's control panel. To set up manually, you need the SSID and password for an access point.

When the access point supports WPS, you can automatically make the Wi-Fi connection settings by using the push button or PIN code, without using the SSID and password.

*Note:*
*If you are using an access point with its default settings, the SSID and password are on the label. If you do not know the SSID and password, contact the person who set up the access point, or see the documentation provided with the access point.*

1.  Tap  on the printer's control panel.

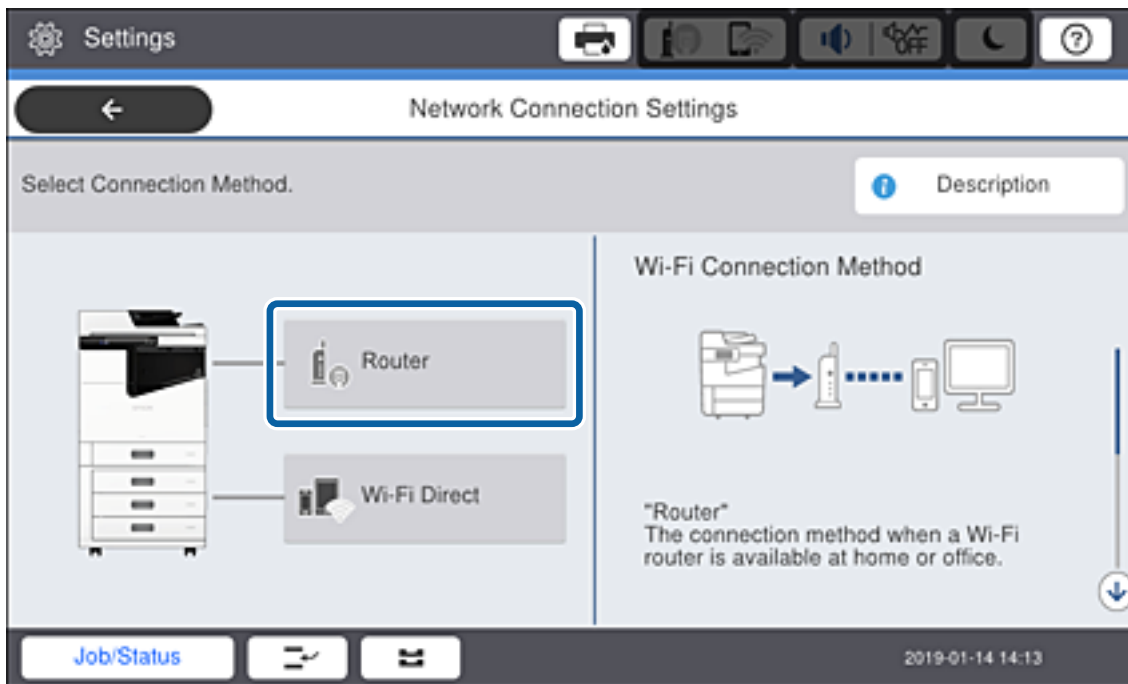

27

2. Tap **Router**.

3. Tap **Start Setup**.

4. Tap **Wi-Fi Setup**.

   If you have made Ethernet settings, check the message and then tap **Yes**.

5. Tap **Wi-Fi Setup Wizard**.

6. Select the SSID for the access point.

   *Note:*
   ❑ *If the SSID you want to connect to is not displayed on the printer's control panel, tap **Search Again** to update the list. If it is still not displayed, tap **Enter Manually** and then enter the SSID directly.*

   ❑ *If you do not know the SSID, check if it is written on the label of the access point. If you are using the access point with its default settings, use the SSID written on the label.*

7. Tap **Enter Password**, enter the password, and then tap **OK**.

   *Note:*
   ❑ *The password is case-sensitive.*

   ❑ *If you do not know the password, check if it is written on the label of the access point. If you are using the access point with its default settings, use the password written on the label. The password may also be called a "Key", a "Passphrase", and so on.*

   ❑ *If you enter the SSID directly, select **Available** for **Password**, and then enter the password.*

   ❑ *If you do not know the password for the access point, see the documentation provided with the access point, or contact the person who set it up.*

8. When you have finished entry, tap **Start Setup**.

9.  Tap **OK**.

    *Note:*
    *If you fail to connect, load A4 size plain paper, and the tap **Print Check Report** to print a network connection report.*

10. Tap **Close** on the network connection settings screen.

**Related Information**

➡

➡

# Function Settings

This chapter explains the first settings to make in order to use each function of the device.

## Software for Setting

In this topic, the procedure for making settings from the administrator's computer using Web Config is explained.

## Web Config (Web Page for Device)

### About Web Config

Web Config is a built-in web page of the printer for configuring the printer's settings. You can operate the printer connected to the network from the computer.

To access Web Config, you need to have first assigned an IP address to the printer.

*Note:*
*You can lock the settings by configuring the administrator password to the printer.*

## Accessing Web Config

Enter the printer's IP address into a web browser. JavaScript must be enabled. When accessing Web Config via HTTPS, a warning message will appear in the browser since a self-signed certificate, stored in the printer, is used but there is no problem.

❏ Accessing via HTTPS

  IPv4: https://<printer IP address> (without the < >)

  IPv6: https://[printer IP address]/ (with the [ ])

❏ Accessing via HTTP

  IPv4: http://<printer IP address> (without the < >)

  IPv6: http://[printer IP address]/ (with the [ ])

### Examples

❏ IPv4:

  https://192.0.2.111/

  http://192.0.2.111/

❏ IPv6:

  https://[2001:db8::1000:1]/

  http://[2001:db8::1000:1]/

*Note:*
*If the printer name is registered with the DNS server, you can use the printer name instead of the printer's IP address.*

### Related Information

# Using the Print Functions

Enable to use the print function through the network.

To use the printer on the network, you need to set the port for network connection on the computer as well as the printer's network connection.

❏ Server / client connection : Set the port on the server computer

  For the server / client connection, explain how to set the port manually.

❏ Peer to peer connection : Set the port on each computer

  For peer to peer connection, explain how to set the port automatically using the installer available from the software disc or Epson's website.

## Print Settings for Server / Client Connection

Enable to print from the printer that is connected as the server / client connection.

For the server / client connection, set up the print server first, and then share the printer on the network.

When using the USB cable to connect to the server, also set the print server first, and then share the printer on the network.

## Setting Up the Network Ports

Create the print queue for network printing on the print server by using standard TCP/IP, and then set the network port.

This example is when using Windows 2012 R2.

1.  Open the devices and printers screen.

    **Desktop** > **Settings** > **Control Panel** > **Hardware and Sound** or **Hardware** > **Devices and Printers**.

2.  Add a printer.

    Click **Add printer**, and then select **The printer that I want isn't listed**.

3.  Add a local printer.

    Select **Add a local printer or network printer with manual settings**, and then click **Next**.

4.  Select **Create a new port**, select **Standard TCP/IP Port** as the Port Type, and then click **Next**.

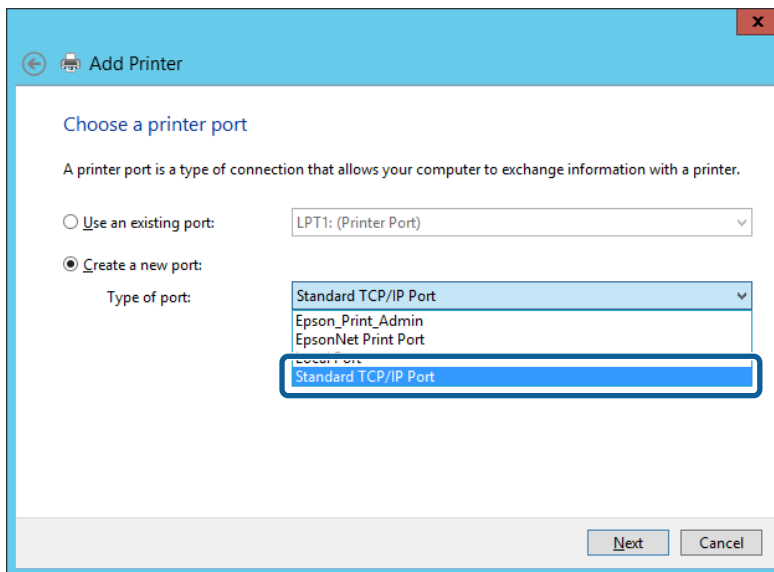

5.  Enter the printer's IP address or printer name in **Host Name or IP Address** or **Printer Name or IP Address**, and then click **Next**.

    Example:

    ❏ Printer name : EPSONA1A2B3C

    ❏ IP address : 192.0.2.111

    Do not change **Port name**.

**Function Settings**

Click **Continue** when the **User Account Control** screen is displayed.

*Note:*
*If you specify the printer name on the network where the name resolution is available, the IP address is tracked even if printer's IP address has been changed by DHCP. You can confirm the printer name from the network status screen on the printer's control panel or network status sheet.*

6. Set the printer driver.

   ❏ If the printer driver is already installed:

   Select **Manufacturer** and **Printers**. Click **Next**.

   ❏ If the printer driver is not installed:

   Click **Have Disc** and then insert the software disc supplied with the printer. Click **Browse**, and then select the folder on the disc containing the printer driver. Make sure you select the correct folder. The location of the folder may change depending on your operating system.

   32 bit version of Windows: WINX86

   64 bit version of Windows: WINX64

7. Follow the on-screen instructions.

When using the printer under the server / client connection (printer sharing using the Windows server), make the sharing settings hereafter.

**Related Information**

➡

### Checking the Port Configuration - Windows

Check if the correct port is set for the print queue.

1. Open the devices and printers screen.

   **Desktop** > **Settings** > **Control Panel** > **Hardware and Sound** or **Hardware** > **Devices and Printers**.

2.   Open the printer properties screen.

     Right-click the printer icon, and then click **Printer properties**.

3.   Click the **Ports** tab, select **Standard TCP/IP Port**, and then click **Configure Port**.

4.   Check the port configuration.

     ❏ For RAW

        Check that **Raw** is selected in **Protocol**, and then click **OK**.

     ❏ For LPR

        Check that **LPR** is selected in **Protocol**. Enter "PASSTHRU" in **Queue name** from **LPR Settings**. Select **LPR Byte Counting Enabled**, and then click **OK**.

## Sharing the Printer (Windows only)

When using the printer under the server / client connection (printer sharing using the Windows server), set up the printer sharing from the print server.

1.   Select **Control Panel** > **View devices and printers** on the print server.

2.   Right-click the printer icon (print queue) that you want to share with, and then select **Printer Properties** > **Sharing** tab.

3.   Select **Share this printer** and then enter to **Share name**.

     For Windows Server 2012, click **Change Sharing Options** and then configure the settings.

## Installing Additional Drivers (Windows only)

If the Windows versions for a server and clients are different, it is recommended to install additional drivers to the print server.

1.   Select **Control Panel** > **View devices and printers** on the print server.

2.   Right-click the printer icon that you want to share with the clients, and then click **Printer Properties** > **Sharing** tab.

3.   Click **Additional Drivers**.

     For Windows Server 2012, click Change Sharing Options and then configure the settings.

4.   Select versions of Windows for clients, and then click OK.

5.   Select the information file for the printer driver (*.inf) and then install the driver.

**Related Information**

➡ "Using the Shared Printer – Windows" on page 35

## Using the Shared Printer – Windows

The administrator needs to inform the clients of the computer name assigned to the print server and how to add it to their computers. If the additional driver(s) have not been configured yet, inform the clients how to use **Devices and Printers** to add the shared printer.

If additional driver(s) have already been configured on the print server, follow these steps:

1. Select the name assigned to the print server in **Windows Explorer**.

2. Double-click the printer that you want to use.

# Print Settings for Peer to Peer Connection

For peer to peer connection (direct printing), a printer and a client computer have a one-to-one relationship.

The printer driver must be installed on each client computer.

### Related Information

➡ "Setting the Printer Driver" on page 35

## Setting the Printer Driver

For small organizations, we recommend installing the printer driver on each client computer. Use the installer on Epson website or on the software disc.

*Note:*
*When the printer is used from many client computers, by using EpsonNet SetupManager and delivering the driver as a package, install operation time can be reduced dramatically.*

1. Run the installer.

   ❏ Running from the website

      Access the following website, and then enter the product name. Go to **Setup**, download the software, and then run it.

      http://epson.sn

   ❏ Running from the software disc (only for the models that come with a software disc and users with computers with disc drives.)

      Insert the software disc into the computer.

2.  Select the connection method for the printer, and then click **Next**.

*Note:*
If **Install Software** *is displayed, select* **Set up Printer connection again (for new network router or changing USB to network, etc.)** *and then click* **Next**.

3.  Follow the on-screen instructions.

**Related Information**

➡ "EpsonNet SetupManager" on page 122

# Basic Settings for Printing

Set the print settings, such as paper size or printing error.

## Paper Source Settings

Set the size and type of paper to be loaded in each paper source.

1.  Access Web Config and select the **Print** tab > **Paper Source Settings**.

2.  Set each item.

    The displayed items may vary by the situation.

    ❏ Paper source name

        Display the target paper source name, such as **Cassette 1**.

**Function Settings**

❏ **Paper Size**

Select the paper size you want to set from the pull-down menu.

❏ **Unit**

Select the unit of the user-defined size. You can select it when **User-Defined** is selected on **Paper Size**.

❏ **Width**

Set the horizontal length of the user-defined size.

The range you can enter here depends on the paper source, which is indicated on the side of **Width**.

When you select **mm** in **Unit**, you can enter up to one decimal place.

When you select **inch** in **Unit**, you can enter up to two decimal places.

❏ **Height**

Set the vertical length of the user-defined size.

The range you can enter here depends on the paper source, which is indicated on the side of **Height**.

When you select **mm** in **Unit**, you can enter up to one decimal place.

When you select **inch** in **Unit**, you can enter up to two decimal places.

❏ **Paper Type**

Select the paper type you want to set from the pull-down menu.

3. Check the settings, and then click **OK**.

**Related Information**

➡

## Interface Settings

Set the timeout of the print jobs or printing language assigned to each interface.

This item is displayed on the PCL or PostScript compatible printer.

1. Access Web Config and select the **Print** tab > **Interface Settings**.

2. Set each item.

❏ **Timeout Settings**

Set the timeout of the print jobs sent directly via USB.

You can set between 5 and 300 seconds by the second.

When you do not want to timeout, enter 0.

❏ **Printing Language**

Select the printing language for each USB interface and network interface.

When you select **Auto**, the printing language is automatically detected by the print jobs being sent.

3. Check the settings, and then click **OK**.

**Related Information**

➡

# Error Settings

Set the displaying error for the device.

1. Access Web Config and select the **Print** tab > **Error Settings**.

2. Set each item.

   ❏ Paper Size Notice

   Set whether to display an error on the control panel when the paper size of the specified paper source is different from the paper size of the print data.

   ❏ Paper Type Notice

   Set whether to display an error on the control panel when the paper type of the specified paper source is different from the paper type of the print data.

   ❏ Auto Error Solver

   Set whether to automatically cancel the error if there is no operation on the control panel for 5 seconds after displaying the error.

3. Check the settings, and then click **OK**.

**Related Information**

➡

# Universal Print Settings

Set when you print from external devices without using the printer driver.

Some items are not displayed depending on the printing language of your printer.

1. Access Web Config and select the **Print** tab > **Universal Print Settings**.

2. Set each item.

3. Check the settings, and then click **OK**.

**Related Information**

➡

*Basic*

| Items | Explanation |
|---|---|
| Top Offset(-30.0-30.0mm) | Sets the vertical position of the paper on which printing starts. |
| Left Offset(-30.0-30.0mm) | Sets the horizontal position of the paper on which printing starts. |
| Top Offset in Back(-30.0-30.0mm) | Sets the vertical position of the paper on which the printing of the back side of the paper starts in duplex printing. |
| Left Offset in Back(-30.0-30.0mm) | Sets the horizontal position of the paper on which the printing of the back side of the paper starts in duplex printing. |

## Function Settings

| Items | Explanation |
|---|---|
| Check Paper Width | Set whether to check paper width when printing. |
| Skip Blank Page | If there is a blank page in the print data, set not to print a blank page. |

### *PDL Print Configuration*

You can specify settings for PCL or PostScript printing.

This item is displayed on a PCL or PostScript compatible printer.

### Common Settings

| Items | Explanation |
|---|---|
| Paper Size | Select the paper size on which you want to print. |
| Paper Type | Select the type of paper on which you print. |
| Orientation | Select the orientation you want to use to print. |
| Quality | Select the print quality you want to use for printing. |
| Ink Save Mode | Set whether to print with reduced ink consumption. |
| Print Order | Select to print from the top or the last page. |
| Number of Copies(1-999) | Set the number of copies you want to print. |
| Binding Margin | Select the binding position. |
| Auto Paper Ejection | Select whether to eject paper automatically when timeout is occurred during receiving a print job. |
| 2-Sided Printing | Set whether printing 2-sided. |

### PCL Menu

| Items | Explanation |
|---|---|
| Font Source | Select whether to use the font installed on the printer or download it. |
| Font Number | Specify the font number you want to use. |
| Pitch(0.44-99.99cpi) | If the font to use is scalable and fixed-pitch font, specify the font size in pitch. |
| Height(4.00-999.75pt) | If the font to use is scalable and proportional font, specify the font size in points. |
| Symbol Set | Select the symbol set of the font you want to use. |
| Form(5-128lines) | Specify the number of lines per page. |
| CR Function | Select the operation for the CR code (return). |
| LF Function | Select the operation for the LF code (new line), FF code (new page). |
| Paper Source Assign | Specify paper feeder assignment for PCL paper feed command. |

Function Settings

**PS3 Menu**

| Items | Explanation |
|---|---|
| Error Sheet | Set whether to print an error sheet when PS3 printing error occurs. |
| Coloration | Set as color printing or monochrome printing.<br>You can only select monochrome for this printer. |
| Binary | Set whether to accept the binary data or not. |
| PDF Page Size | Set the paper size for PDF printing. |

# Setting the Server or the Shared Folder

Set the server or the shared folder that is necessary when you use email or the scan function.

**Related Information**

➡

## Relation between the Server and Each Function

The relation between the printer's function and the server or the shared folder is as below.

Set the server or shared folder in case you use each function.

| | Email server | FTP server | File server (shared folder) | LDAP server |
|---|---|---|---|---|
| Scan to Email | ✓ | | | |
| Scan to FTP | | ✓ | | |
| Scan to Network Folder | | | ✓ | |
| Email Notification | ✓ | | | |
| LDAP cooperation | | | | ✓ |

**Related Information**

➡
➡
➡

## Configuring a Mail Server

Set the mail server from Web Config.

When the printer can send the email by setting the mail server, the following are possible.

❏ Transfers the scan results by using email

**Function Settings**

❏ Receives the email notification from the printer

Check below before setting up.

❏ The printer is connected to the network that can access the mail server.

❏ Email setting information of the computer that uses the same mail server as the printer.

*Note:*
❏ *When you use the mail server on the Internet, confirm the setting information from the provider or website.*

❏ *You can also set the mail server from the printer's control panel. Access as below.*

   *Settings > General Settings > Network Settings > Advanced > Email Server > Server Settings*

1.  Access Web Config and select the **Network** tab > **Email Server** > **Basic**.

2.  Enter a value for each item.

3.  Select **OK**.

    The settings you have selected are displayed.

    When the setup completes, perform the connection check.

**Related Information**
➡ "Checking a Mail Server Connection" on page 43
➡ "Mail Server Setting Items" on page 42
➡ "Accessing Web Config" on page 31

**Function Settings**

# Mail Server Setting Items

| Items | Settings and Explanation | |
|---|---|---|
| Authentication Method | Specify the authentication method for the printer to access the mail server. | |
| | Off | Set when the mail server does not need authentication. |
| | SMTP AUTH | Authenticates on the SMTP server (outgoing mail server) when sending the email. The mail server needs to support SMTP authentication. |
| | POP before SMTP | Authenticates on the POP3 server (receiving mail server) before sending the email. When you select this item, set the POP3 server. |
| Authenticated Account | If you select **SMTP AUTH** or **POP before SMTP** as the **Authentication Method**, enter the authenticated account name between 0 and 255 characters in ASCII (0x20-0x7E).<br><br>When you select **SMTP AUTH**, enter the SMTP server account. When you select **POP before SMTP**, enter the POP3 server account. | |
| Authenticated Password | If you select **SMTP AUTH** or **POP before SMTP** as the **Authentication Method**, enter the authenticated password between 0 and 20 characters in ASCII (0x20-0x7E).<br><br>When you select **SMTP AUTH**, enter the authenticated account for the SMTP server. When you select **POP before SMTP**, enter the authenticated account for the POP3 server. | |

**Function Settings**

| Items | Settings and Explanation | |
|---|---|---|
| Sender's Email Address | Enter the sender's email address such as the email address of the system administrator. This is used when authenticating, so enter a valid email address that is registered to the mail server. | |
| | Enter between 0 and 255 characters in ASCII (0x20-0x7E) except for : ( ) < > [ ] ; ¥. A period "." cannot be the first character. | |
| SMTP Server Address | Enter between 0 and 255 characters using A-Z a-z 0-9 . - . You can use IPv4 or FQDN format. | |
| SMTP Server Port Number | Enter a number between 1 and 65535. | |
| Secure Connection | Select the encryption method of the communication to the mail server. | |
| | None | If you select **POP before SMTP** in **Authentication Method**, the connection is not encrypted. |
| | SSL/TLS | This is available when **Authentication Method** is set to **Off** or **SMTP AUTH**. Communication is encrypted from the start. |
| | STARTTLS | This is available when **Authentication Method** is set to **Off** or **SMTP AUTH**. Communication is not encrypted from the start, but depending on the network environment, whether the communication is encrypted or not is changed. |
| Certificate Validation | The certificate is validated when this is enabled. We recommend this is set to **Enable**. To set up, you need to import the CA Certificate to the printer. | |
| POP3 Server Address | If you select **POP before SMTP** as the **Authentication Method**, enter the POP3 server address between 0 and 255 characters using A-Z a-z 0-9 . - . You can use IPv4 or FQDN format. | |
| POP3 Server Port Number | If you select **POP before SMTP** as the **Authentication Method**, enter a number between 1 and 65535. | |

| Connection to SMTP server failed. Change Secure Connection to None. | This message appears when an SMTP mismatch occurs between a server and a client, or when the server does not support SMTP secure connection (SSL connection). |
| Connection to SMTP server failed. Change Secure Connection to SSL/TLS. | This message appears when an SMTP mismatch occurs between a server and a client, or when the server requests to use an SSL/TLS connection for an SMTP secure connection. |
| Connection to SMTP server failed. Change Secure Connection to STARTTLS. | This message appears when an SMTP mismatch occurs between a server and a client, or when the server requests to use an STARTTLS connection for an SMTP secure connection. |
| The connection is untrusted. Check the following. - Date and Time | This message appears when the printer's date and time setting is incorrect or the certificate has expired. |

**Function Settings**

| Messages | Cause |
|---|---|
| The connection is untrusted. Check the following. - CA Certificate | This message appears when the printer does not have a root certificate corresponding to the server or a CA Certificate has not been imported. |
| The connection is not secured. | This message appears when the obtained certificate is damaged. |
| SMTP server authentication failed. Change Authentication Method to SMTP-AUTH. | This message appears when an authentication method mismatch occurs between a server and a client. The server supports SMTP AUTH. |
| SMTP server authentication failed. Change Authentication Method to POP before SMTP. | This message appears when an authentication method mismatch occurs between a server and a client. The server does not support SMTP AUTH. |
| Sender's Email Address is incorrect. Change to the email address for your email service. | This message appears when the specified sender's Email address is wrong. |
| Cannot access the printer until processing is complete. | This message appears when the printer is busy. |

**Related Information**

➡

# Shared Folder Settings

Set up the shared folder for saving the result of scanning.

The printer writes the data to the shared folder by logging in to the computer as the user.

Set up the MS Network together with the shared folder.

The shared folder set up here can be specified as the destination of scanning.

# Creating the Shared Folder

### Before Creating the Shared Folder

Before creating the shared folder, check the following.

❏ The printer is connected to the network where it can access the computer where the shared folder will be created.

❏ A multi-byte character is not included in the name of the computer where the shared folder will be created.

> **Important:**
>
> *When a multi-byte character is included in the computer name, saving the file to the shared folder may fail.*
>
> *In that case, change to the computer that does not include the Multi-byte character in the name or change the computer name.*
>
> *When changing the computer name, make sure to confirm with the administrator in advance because it may affect some settings, such as computer management, resource access, etc.*

**Function Settings**

### Checking the Network Profile

On the computer where the shared folder will be created, check whether folder sharing is available.

1. Log in to the computer where the shared folder will be created by the administrator authority user account.

2. Select **Control Panel** > **Network and Internet** > **Network and Sharing Center**.

3. Click **Advanced sharing settings**, and then click ⊗ for the profile with **(current profile)** in the displayed network profiles.

4. Check whether **Turn on file and printer sharing** is selected on **File and Printer Sharing**.

   If already selected, click **Cancel** and close the window.

   When you change the settings, click **Save Changes** and close the window.

### Location Where the Shared Folder is Created and an Example of the Security

Depending on the location where the shared folder is created, security and convenience vary.

To operate the shared folder from the printers or other computers, the following reading and changing permissions for the folder are required.

❏ **Sharing** tab > **Advanced Sharing** > **Permissions**

   It controls the network access permission of the shared folder.

❏ Access permission of **Security** tab

   It controls permission of the network access and local access of the shared folder.

When you set **Everyone** to the shared folder that is created on the desktop, as an example of creating a shared folder, all users who can access the computer will be permitted access.

However, the user who does not have authority cannot access them because the desktop (folder) is under the control of the user folder, and then the security settings of the user folder are handed down to it. The user who is permitted access on the **Security** tab (user logged in and administrator in this case) can operate the folder.

See below to create the proper location.

This example is when creating the "scan_folder" folder.

#### Example of Configuration for File Servers

This explanation is an example for creating the shared folder on the root of the drive on the shared computer, such as the file server under the following condition.

Access controllable users, such as someone who has the same domain of a computer to create a shared folder, can access the shared folder.

Set this configuration when you permit any user to read and write to the shared folder on the computer, such as the file server and the shared computer.

❏ Place for creating shared folder: Root of drive

❏ Folder path: C:\scan_folder

❏ Access permission via network (Share Permissions): Everyone

❏ Access permission on file system (Security): Authenticated Users

1. Log in to the computer where the shared folder will be created by the administrator authority user account.

**Function Settings**

2. Start explorer.

3. Create the folder on the root of drive, and then name it "scan_folder".

   For the folder name, enter between 1 and 12 alphanumeric characters. If the character limit of the folder name is exceeded, you may not be able to access it normally by the varied environment.

4. Right click the folder, and then select **Properties**.
5. Click **Advanced Sharing** on the **Sharing** tab.
**Function Settings**

6. Select **Share this folder**, and then click **Permissions**.

7. Select **Everyone** group of **Group or user names**, select **Allow** on **Change**, and then click **OK**.
**Function Settings**

8.  Click **OK**.

9.  Select **Security** tab, and then select **Authenticated Users** on the **Group or user names**.

"Authenticated Users" is the special group that includes all users who can log in to the domain or computer. This group is displayed only when the folder is created just below the root folder.

If it is not displayed, you can add it by clicking **Edit**. For more details, see Related Information.

**Function Settings**

10. Check that **Allow** on **Modify** is selected in **Permissions for Authenticated Users**.

    If it is not selected, select **Authenticated Users**, click **Edit**, select **Allow** on **Modify** in **Permissions for Authenticated Users**, and then click **OK**.
11. Select **Sharing** tab.

    The network path of the shared folder is displayed. This is used when registering to the contacts of the printer. Please write it down.

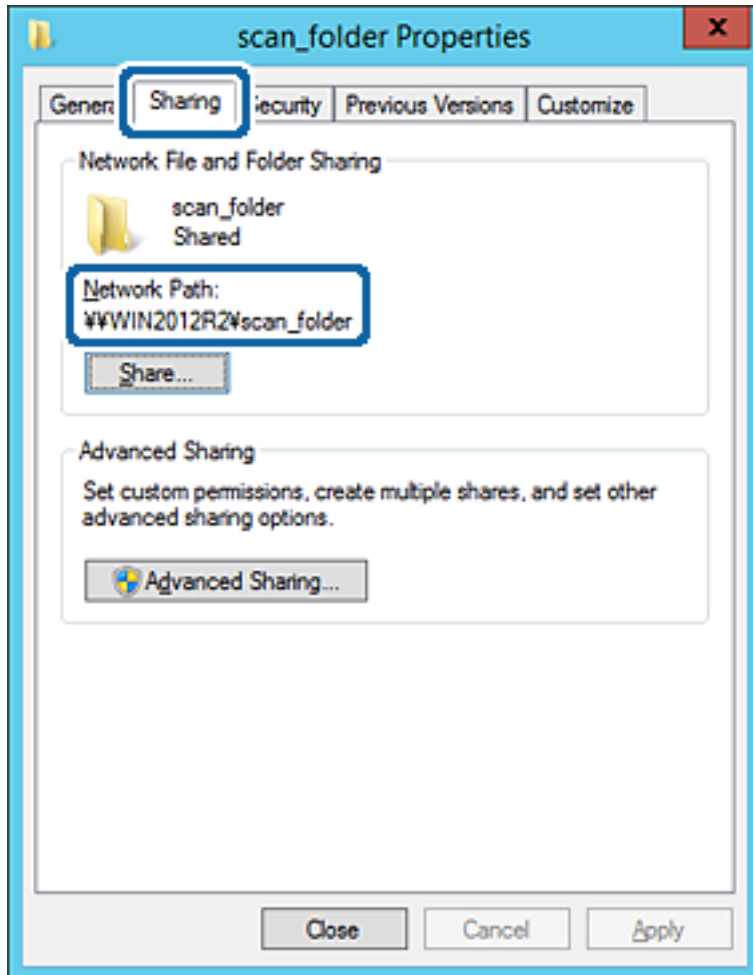

12. Click **OK** or **Close** to close the screen.

    Check whether the file can be written or read on the shared folder from the computers of the same domain.

**Related Information**

➡

**Example of Configuration for a Personal Computer**

This explanation is an example for creating the shared folder on the desktop of the user currently logging in to the computer.

The user who logs in to the computer and who has administrator authority can access the desktop folder and the document folder that are under the User folder.

Set this configuration when you DO NOT permit reading and writing to another user to the shared folder on a personal computer.

❏ Place for creating shared folder: Desktop

❏ Folder path: C:\Users\xxxx\Desktop\scan_folder

**Function Settings**

❏ Access permission via network (Share Permissions): Everyone

❏ Access permission on file system (Security): do not add, or add User/Group names to permit access

1.  Log in to the computer where the shared folder will be created by the administrator authority user account.

2.  Start explorer.

3.  Create the folder on the desktop, and then name it "scan_folder".

    For the folder name, enter between 1 and 12 alphanumeric characters. If the character limit of the folder name is exceeded, you may not be able to access it normally by the varied environment.

4.  Right click the folder, and then select **Properties**.
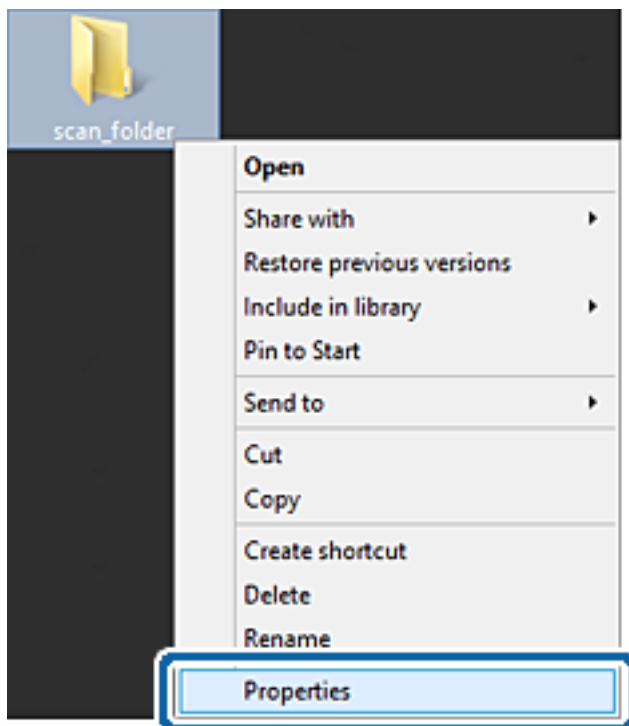

5. Click **Advanced Sharing** on the **Sharing** tab.
6. Select **Share this folder**, and then click **Permissions**.

7. Select **Everyone** group of **Group or user names**, select **Allow** on **Change**, and then click **OK**.
8.  Click **OK**.

9.  Select **Security** tab.

10. Check the group or the user in the **Group or user names**.

    The group or the user that is displayed here can access the shared folder.

    In this case, the user who logs in to this computer and the Administrator can access the shared folder.

    Add access permission, if necessary. You can add it by clicking **Edit**. For more details, see Related Information.
11.  Select **Sharing** tab.

The network path of the shared folder is displayed. This is used when registering to the printer's contact. Please write it down.

12.  Click **OK** or **Close** to close the screen.

Check whether the file can be written or read on the shared folder from the computers of users or groups with access permission.

**Related Information**

➡ "Adding Group or User Which Permits Access" on page 57

### Adding Group or User Which Permits Access

You can add the group or user which permits access.

1.  Right click the folder and select **Properties**.

2.  Select **Security** tab.

3.  Click **Edit**.
4. Click **Add** under the **Group or user names**.

5. Enter the group or user name that you want to permit access, and then click **Check Names**.

An underline is added to the name.

*Note:*
*If you do not know the full name of the group or user, enter part of the name, and then click **Check Names**. The group names or user names that match part of the name are listed, and then you can select the full name from the list.*

*If just one name matches, the full name with underlining is displayed in **Enter the object name to select**.*
6. Click **OK**.

7. On the Permission screen, select the user name that is entered in **Group or user names** , select the access permission on **Modify**, and then click **OK**.

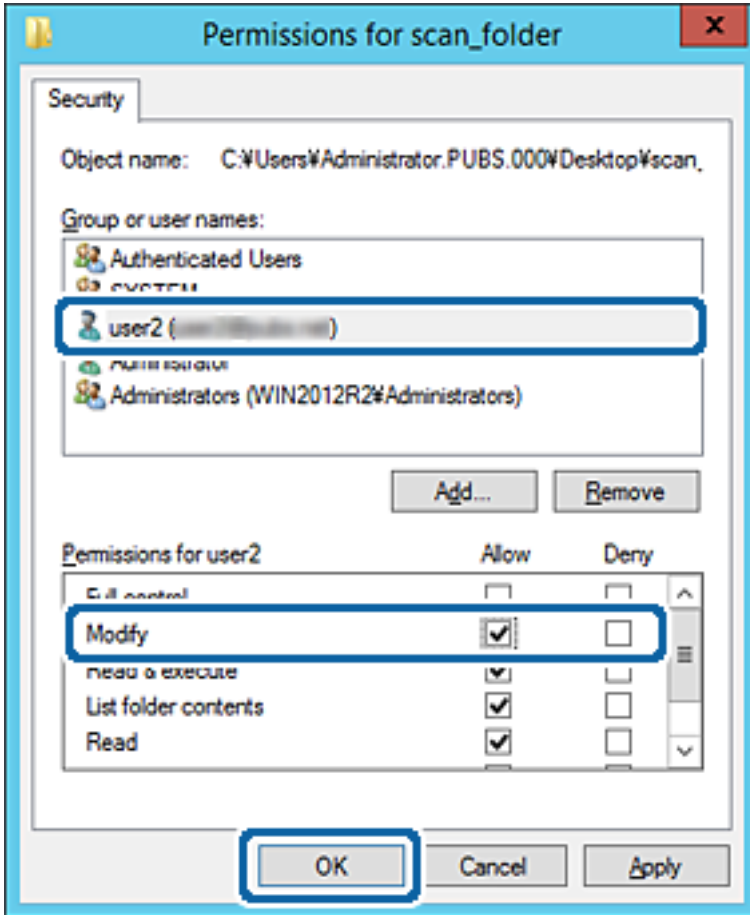

8. Click **OK** or **Close** to close the screen.

   Check whether the file can be written or read on the shared folder from the computers of users or groups with access permission.

**Related Information**

➡ "Using Contacts" on page 62

## Using Microsoft Network Sharing

When enabling it, the following are possible.

❏ Shares the USB storage over the network that is connected to the printer.

❏ Forwards the scan result to the shared folder on the computer.

1. Access Web Config and select the **Network** tab > **MS Network**.

2. Select **Use Microsoft network sharing**.

3. Set each item.

4. Click **Next**.

5. Confirm the settings, and then click **OK**.

6. Enter the following on the computer's explorer, and then press the Enter key.

   Check whether there is a network folder and that you can access it.

   \\Printer's IP address

   Example : \\192.0.2.111

**Related Information**

➡

### MS Network Setting items

| Items | Explanation |
|---|---|
| Use Microsoft network sharing | Select when enabling MS Network sharing. |
| File Sharing | Select whether to enable file sharing or not.<br>Enable it for the following situations.<br>❏ Shares the USB storage over the network that is connected to the printer.<br>❏ Forwards the scan result to the shared folder on the computer. |
| User Authentication | Select whether to perform user authentication or not when accessing USB storage on the network that is connected to the printer. |
| User Name | Set the user name for user authentication. Enter between 1 and 127 characters in ASCII except "/\[]:;\|=,+*?<>@%. However, you cannot enter a single period or a combination of the period "." and a space alone. |
| Password | Set the password for user authentication. Enter between 1 and 64 characters in ASCII. However, you cannot just set 10 asterisks "*". |
| Encrypted Communication | Set whether to enable encrypted communication or not. You can select it when **Enable** is selected on **User Authentication**. |
| Host Name | Display the MS Network host name of the printer. To change this, select the **Network** tab > **Basic**, and then change the **Device Name**. |
| Workgroup Name | Enter the work group name of MS Network. Enter between 0 and 15 characters in ASCII. |
| Access Attribute | Set the Access Attribute of file sharing. |
| Shared Name(USB Host) | Display as the shared name when sharing the file. |

# Using Contacts

## Destination Setting Features

You can use the printer's contacts list as the destination for the scan features. And you can use LDAP server information too.

*Note:*
❏ *You can switch between your printer's contacts list and the LDAP using the printer's control panel.*

❏ *To use email features, you need to configure a mail server.*

### Related Information

## Configuring Contacts

The Contacts list can include the following types of destinations:

❏ **Email**: Destination for email

❏ **Network Folder (SMB)/FTP**: Destination for scan data

## Contacts Configuration Comparison

There are three tools for configuring the printer's contacts: Web Config, Epson Device Admin, and the printer's control panel. The differences between three tools are listed in the table below.

| Features | Web Config | Epson Device Admin | Printer's control panel |
|---|---|---|---|
| Registering a destination | ✓ | ✓ | ✓ |
| Editing a destination | ✓ | ✓ | ✓ |
| Adding a group | ✓ | ✓ | ✓ |
| Editing a group | ✓ | ✓ | ✓ |
| Deleting a destination or groups | ✓ | ✓ | ✓ |
| Deleting all destinations | ✓ | ✓ | – |
| Importing a file | ✓ | ✓ | – |
| Exporting to a file | ✓ | ✓ | – |
| Assigning destinations to frequent use | ✓ | ✓ | ✓ |

**Function Settings**

| Features | Web Config | Epson Device Admin | Printer's control panel |
|---|---|---|---|
| Sorting destinations assigned to frequent use | – | – | ✓ |

# Registering a Destination to Contacts using Web Config

*Note:*
*You can also register the contacts on the printer's control panel.*

1. Access Web Config and select the **Scan/Copy** tab > **Contacts**.

2. Select the number that you want to register, and then click **Edit**.

3. Enter **Name** and **Index Word**.

4. Select the destination type as the **Type** option.

   *Note:*
   *You cannot change the **Type** option after registration is complete. If you want to change the type, delete the destination and then register again.*

5. Enter a value for each item, and then click **Apply**.

**Related Information**

➡ "Backing Up the Settings" on page 99

<div align="center">**Function Settings**</div>

## *Destination Setting Items*

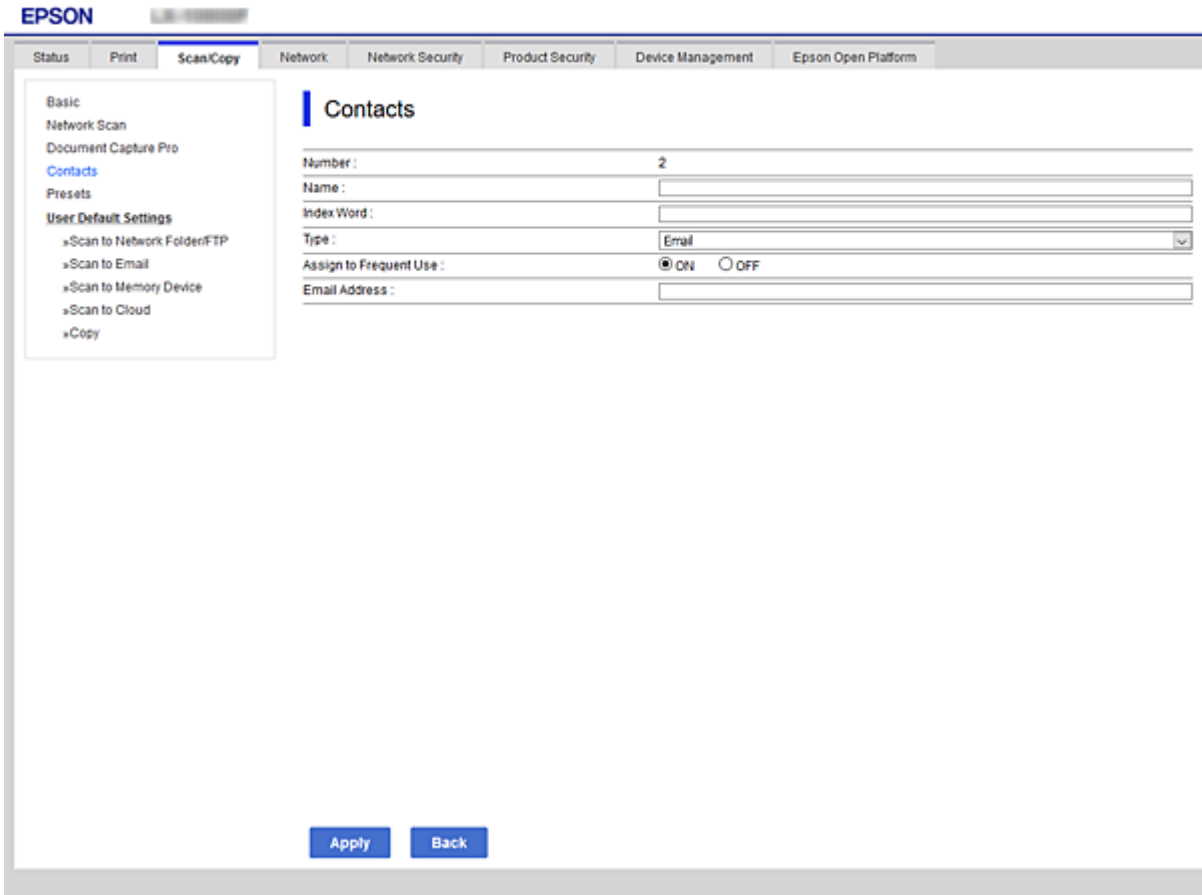

| Items | Settings and Explanation |
|---|---|
| Common Settings | |
| Name | Enter a name displayed in the contacts in 30 characters or less in Unicode (UTF-8). If you do not specify this, leave it blank. |
| Index Word | Enter words to search in 30 characters or less in Unicode (UTF-8). If you do not specify this, leave it blank. |
| Type | Select the type of the address that you want to register. |
| Assign to Frequent Use | Select to set the registered address as a frequently used address.<br><br>When setting as a frequently used address, it is displayed on the top screen of scan, and you can specify the destination without displaying the contacts. |
| Email | |
| Email Address | Enter between 1 and 255 characters using A-Z a-z 0-9 ! # $ % & ' * + - . / = ? ^ _ { \| } ~ @. |
| Network Folder (SMB) | |
| Save to | \\"Folder path"<br><br>Enter the location where the target folder is located between 1 and 253 characters in Unicode (UTF-8), omitting "\\". |

**Function Settings**

| Items | Settings and Explanation |
|---|---|
| User Name | Enter a user name to access a network folder in 30 characters or less in Unicode (UTF-8). However, avoid using control characters (0x00 to 0x1f, 0x7F). |
| Password | Enter a password to access a network folder in 20 characters or less in Unicode (UTF-8). However, avoid using control characters (0x00 to 0x1f, 0x7F). |
| FTP | |
| Save to | Enter the server name between 1 and 253 characters in ASCII (0x20-0x7E), omitting "ftp://". |
| User Name | Enter a user name to access an FTP server in 30 characters or less in Unicode (UTF-8). However, avoid using control characters (0x00 to 0x1f, 0x7F). If the server allows anonymous connections, enter a user name such as Anonymous and FTP. If you do not specify this, leave it blank. |
| Password | Enter a password to access to an FTP server within 20 characters or less in Unicode (UTF-8). However, avoid using control characters (0x00 to 0x1f, 0x7F). If you do not specify this, leave it blank. |
| Connection Mode | Select the connection mode from the menu. If a firewall is set between the printer and the FTP server, select **Passive Mode**. |
| Port Number | Enter the FTP server port number between 1 and 65535. |

**Related Information**

## Registering Destinations as a Group

If the destination type is set to **Email**, you can register the destinations as a group.

1. Access Web Config and select the **Scan/Copy** tab > **Contacts**.

2. Select the number that you want to register, and then click **Edit**.

3. Select a group from **Type**.

4. Click **Select** for **Contact(s) for Group**.

   The available destinations are displayed.

5. Select the destination that you want to register to the group, and then click **Select**.

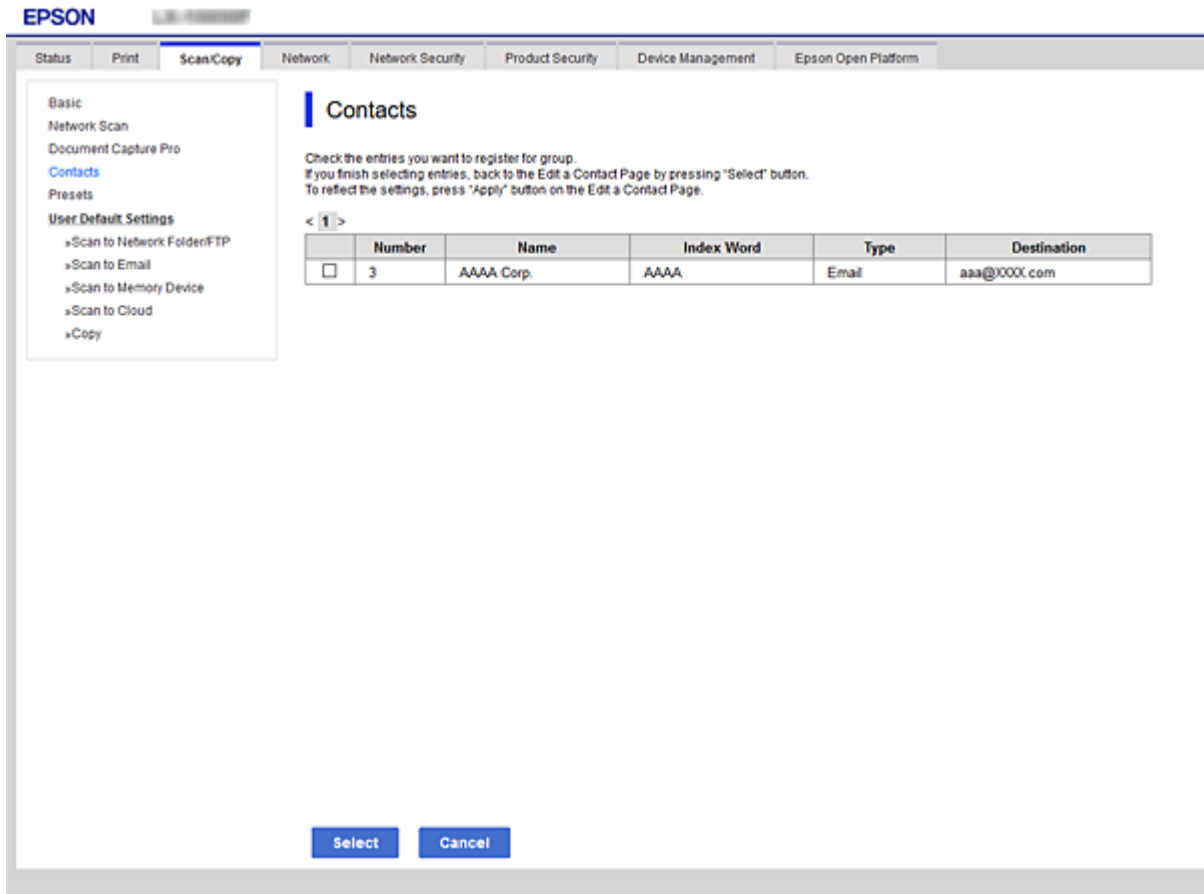

6. Enter a **Name** and **Index Word**.

7. Select whether or not you assign the registered group to the frequently used group.

    *Note:*
    *Destinations can be registered to multiple groups.*

8. Click **Apply**.

**Related Information**

➡ "Accessing Web Config" on page 31

➡ "Backing Up the Settings" on page 99

# Backing Up and Importing Contacts

Using Web Config or other tools, you can back up and import contacts.

For Web Config, you can back up contacts by exporting the printer settings that include contacts. The exported file cannot be edited because it is exported as a binary file.

When importing the printer settings to the printer, contacts are overwritten.

For Epson Device Admin, only contacts can be exported from the device's property screen. Also, if you do not export the security-related items, you can edit the exported contacts and import them because this can be saved as a SYLK file or CSV file.

# Cooperation between the LDAP Server and Users

When cooperating with the LDAP server, you can use the address information registered to the LDAP server as the destination of an email.

**Related Information**

➡ "Configuring the LDAP Server" on page 67

## Configuring the LDAP Server

To use the LDAP server information, register it on the printer.

1.  Access the Web Config and select the **Network** tab > **LDAP Server** > **Basic**.

2.  Enter a value for each item.

3.  Select **OK**.

    The settings you have selected are displayed.

**Related Information**

➡ "Accessing Web Config" on page 31
➡ "LDAP Server Setting Items" on page 68

**Function Settings**

## LDAP Server Setting Items

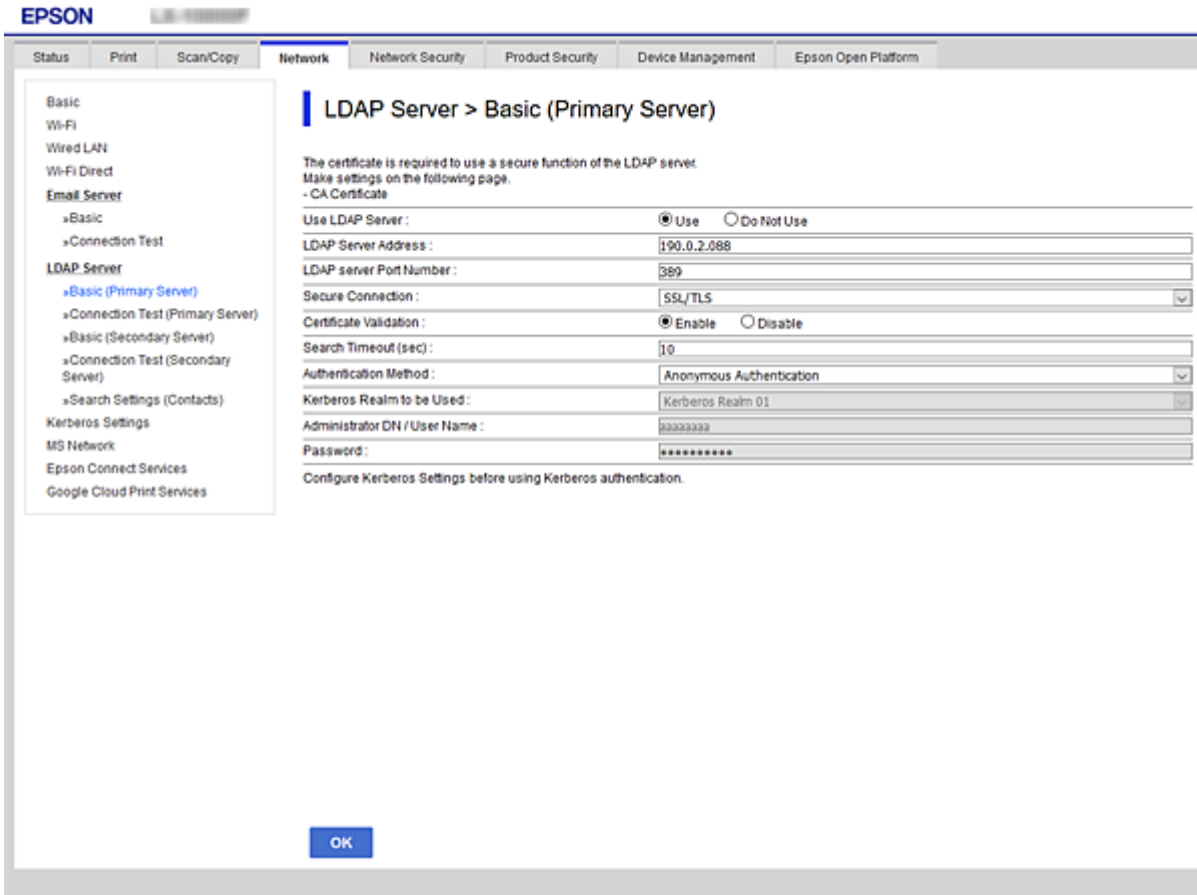

| Items | Settings and Explanation |
|---|---|
| Use LDAP Server | Select **Use** or **Do Not Use**. |
| LDAP Server Address | Enter the address of the LDAP server. Enter between 1 and 255 characters of either IPv4, IPv6, or FQDN format. For the FQDN format, you can use alphanumeric characters in ASCII (0x20-0x7E) and "- " except for the beginning and end of the address. |
| LDAP server Port Number | Enter the LDAP server port number between 1 and 65535. |
| Secure Connection | Specify the authentication method when the printer accesses the LDAP server. |
| Certificate Validation | When this is enabled, the certificate of the LDAP sever is validated. We recommend this is set to **Enable**. To set up, the **CA Certificate** needs to be imported to the printer. |
| Search Timeout (sec) | Set the length of time for searching before timeout occurs between 5 and 300. |

**Function Settings**

| Items | Settings and Explanation |
|---|---|
| Authentication Method | Select one of the methods.<br><br>If you select **Kerberos Authentication**, select **Kerberos Settings** to make settings for Kerberos.<br><br>To perform Kerberos Authentication, the following environment is required.<br><br>❏ The printer and the DNS server can communicate.<br><br>❏ The time of the printer, KDC server, and the server that is required for authentication (LDAP server, SMTP server, File server) are synchronized.<br><br>❏ When the service server is assigned as the IP address, the FQDN of the service server is registered on the DNS server reverse lookup zone. |
| Kerberos Realm to be Used | If you select **Kerberos Authentication** for **Authentication Method**, select the Kerberos realm that you want to use. |
| Administrator DN / User Name | Enter the user name for the LDAP server in 128 characters or less in Unicode (UTF-8). You cannot use control characters, such as 0x00-0x1F and 0X7F. This setting is not used when **Anonymous Authentication** is selected as the **Authentication Method**. If you do not specify this, leave it blank. |
| Password | Enter the password for the LDAP server authentication in 128 characters or less in Unicode (UTF-8). You cannot use control characters, such as 0x00-0x1F and 0X7F. This setting is not used when **Anonymous Authentication** is selected as the **Authentication Method**. If you do not specify this, leave it blank. |

**Related Information**

➡ "Configuring the LDAP Server" on page 67

➡ "Kerberos Settings" on page 69

### *Kerberos Settings*

If you select **Kerberos Authentication** for **Authentication Method** of **LDAP Server** > **Basic**, make the following Kerberos settings from the **Network** tab > **Kerberos Settings**. You can register up to 10 settings for the Kerberos settings.

| Items | Settings and Explanation |
|---|---|
| Realm (Domain) | Enter the realm of the Kerberos authentication in 255 characters or less in ASCII (0x20-0x7E). If you do not register this, leave it blank. |
| KDC Address | Enter the address of the Kerberos authentication server. Enter 255 characters or less in either IPv4, IPv6 or FQDN format. If you do not register this, leave it blank. |
| Port Number (Kerberos) | Enter the Kerberos server port number between 1 and 65535. |

## Configuring the LDAP Server Search Settings

When you set up the search settings, you can use the email address registered to the LDAP server.

1. Access Web Config and select the **Network** tab > **LDAP Server** > **Search Settings**.

2. Enter a value for each item.

3. Click **OK** to display the setting result.

   The settings you have selected are displayed.

**Related Information**

➡ "Accessing Web Config" on page 31

➡ "LDAP Server Search Setting Items" on page 70

## LDAP Server Search Setting Items

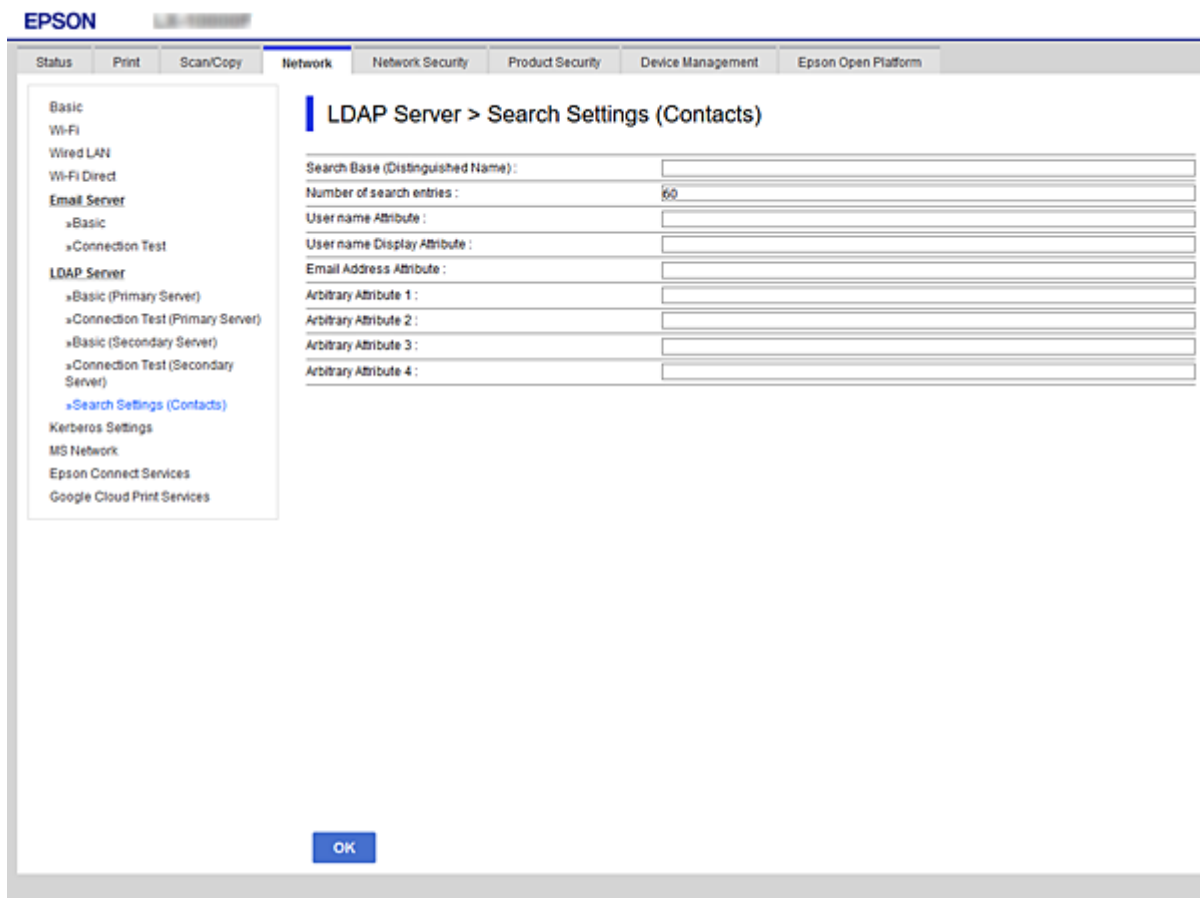

| Items | Settings and Explanation |
|---|---|
| Search Base (Distinguished Name) | If you want to search an arbitrary domain, specify the domain name of the LDAP server. Enter between 0 and 128 characters in Unicode (UTF-8). If you do not search for arbitrary attribute, leave this blank.<br><br>Example for the local server directory: dc=server,dc=local |
| Number of search entries | Specify the number of search entries between 5 and 500. The specified number of the search entries is saved and displayed temporarily. Even if the number of the search entries is over the specified number and an error message appears, the search can be completed. |

**Function Settings**

| Items | Settings and Explanation |
|---|---|
| User name Attribute | Specify the attribute name to display when searching for user names. Enter between 1 and 255 characters in Unicode (UTF-8). The first character should be a-z or A-Z.<br><br>Example: cn, uid |
| User name Display Attribute | Specify the attribute name to display as the user name. Enter between 0 and 255 characters in Unicode (UTF-8). The first character should be a-z or A-Z.<br><br>Example: cn, sn |
| Email Address Attribute | Specify the attribute name to display when searching for email addresses. Enter a combination of between 1 and 255 characters using A-Z, a-z, 0-9, and -. The first character should be a-z or A-Z.<br><br>Example: mail |
| Arbitrary Attribute 1 - Arbitrary Attribute 4 | You can specify other arbitrary attributes to search for. Enter between 0 and 255 characters in Unicode (UTF-8). The first character should be a-z or A-Z. If you do not want to search for arbitrary attributes, leave this blank.<br><br>Example: o, ou |

**Related Information**

➡

## Checking the LDAP Server Connection

Performs the connection test to the LDAP server by using the parameter set on **LDAP Server** > **Search Settings**.

1. Access Web Config and select the **Network** tab > **LDAP Server** > **Connection Test**.

2. Select **Start**.

   The connection test is started. After the test, the check report is displayed.

**Related Information**

➡
➡

### *LDAP Server Connection Test References*

| Messages | Explanation |
|---|---|
| Connection test was successful. | This message appears when the connection with the server is successful. |

**Function Settings**

| Messages | Explanation |
|---|---|
| Connection test failed.<br><br>Check the settings. | This message appears for the following reasons:<br>❏ The LDAP server address or the port number is incorrect.<br>❏ A timeout has occurred.<br>❏ **Do Not Use** is selected as the **Use LDAP Server**.<br>❏ If **Kerberos Authentication** is selected as the **Authentication Method**, settings such as **Realm (Domain)**, **KDC Address** and **Port Number (Kerberos)** are incorrect. |
| Connection test failed.<br><br>Check the date and time on your product or server. | This message appears when the connection fails because the time settings for the printer and the LDAP server are mismatched. |
| Authentication failed.<br><br>Check the settings. | This message appears for the following reasons:<br>❏ **User Name** and/or **Password** is incorrect.<br>❏ If **Kerberos Authentication** is selected as the **Authentication Method**, the time/date may not be configured. |
| Cannot access the printer until processing is complete. | This message appears when the printer is busy. |

**Related Information**

➡

# Using Scan Functions

You can use the scan functions from the computer or by using the printer's control panel.

## Scanning From a Computer

Install the software and check that the network scan service is enabled to scan via a network from the computer.

**Related Information**

➡
➡

## Software to be installed

❏ Epson Scan 2

This is a scanner driver. If you use the device from a computer, install the driver on each client computer. If Document Capture Pro/Document Capture is installed, you can perform the operations assigned to the buttons of the device.

If EpsonNet SetupManager is used, the printer driver is also distributed as a package.

❏ Document Capture Pro (Windows)/Document Capture (Mac OS)

It is installed on the client computer. The jobs registered on a network computer where Document Capture Pro/ Document Capture is installed can be called and run from the deivce's control panel.

You can scan over the network from a computer. Epson Scan 2 is required to scan.

**Related Information**

➡

## Confirming that Network Scan is Enabled

You can set the network scan service when you scan from a client computer over the network. The default setting is enabled.

1. Access Web Config and select the **Scan/Copy** tab > **Network Scan**.

2. Make sure that **Enable scanning** of **EPSON Scan** is selected.

   If it is selected, this task is completed. Close Web Config.

   If it is cleared, select it and go to next step.

3. Click **Next**.

4. Click **OK**.

   The network is re-connected, and then the settings are enabled.

**Related Information**

➡

## Scanning using the control panel

The scan to folder function and the scan to mail function using the printer's control panel, as well as the transfer of scan results to mail, folders, etc. are performed by executing a job from the computer.

**Related Information**

➡

## Settings of Servers and Folders

| Name | Settings | Location | Requirement |
| --- | --- | --- | --- |
| Scan to Network Folder (SMB) | Create and set up sharing of the save folder | A computer that has a save folder location | The administrative user account to the computer that creates save folders. |
| | Destination for Scan to Network Folder (SMB) | Contacts of the device | User name and password to log on to the computer that has the save folder, and the privilege to update the save folder. |
| Scan to Network Folder (FTP) | Setup for FTP server log on | Contacts of the device | Logon information for the FTP server and the privilege to update the save folder. |
| Scan to Email | Setup for email server | Device | Setup information for email server |
| Scan to Cloud | Printer registration to Epson Connect | Device | Internet connection environment |
| | Contact registration to Epson Connect | Epson Connect service | User and printer registration to Epson Connect service |
| Scan to Document Capture Pro (when using Document Capture Pro Server) | Server mode setup for Document Capture Pro | Device | IP address, host name, or FQDN for the computer that Document Capture Pro Server is installed on |

**Related Information**

➡
➡

# Using Document Capture Pro Server

By using Document Capture Pro Server, you can manage the sorting method, saving format, and forwarding destination of a scanning result executed from the printer's control panel. You can call and execute a job previously registered on the server from the printer's control panel.

Install it on the server computer.

For more information on Document Capture Pro Server, contact your local Epson office.

**Related Information**

➡

## Setting Server Mode

To use Document Capture Pro Server, set up as follows.

1. Access Web Config and select the **Scan/Copy** tab > **Document Capture Pro**.

2. Select **Server Mode** for **Mode**.

3. Enter the address of the server with Document Capture Pro Server installed on it for **Server Address**.

   Enter between 2 and 255 characters in either IPv4, IPv6, host name or FQDN format. For FQDN format, you can use alphanumeric characters in ASCII (0x20-0x7E) and "- " except for at the beginning and end of the address.

4. Click **OK**.

   The network is re-connected, and then the settings are enabled.

**Related Information**

➡ "Accessing Web Config" on page 31

# Making System Settings

## Setting the Control Panel

Setup for the printer's control panel. You can set up as follows.

1. Access Web Config and select the **Device Management** tab > **Control Panel**.

2. Set up the following items as necessary.

   ❏ Language

   Select the displayed language on the control panel.

   ❏ Panel Lock

   If you select **ON**, you cannot select items that require the administrator's authority. To select them, log in to the printer as the administrator. If the administrator password is not set, the panel lock is disabled.

   ❏ Operation Timeout

   If you select **ON**, when you log in as the access control user or administrator, you are automatically logged out and go to the initial screen if there is no activity for a certain period of time.

   You can set between 10 seconds and 240 minutes by the second.

   *Note:*
   *You can also set up from the printer's control panel.*

   ❏ *Language : Settings > General Settings > Basic Settings > Language*

   ❏ *Panel Lock : Settings > General Settings > System Administration > Security Settings > Admin Settings > Lock Setting*

   ❏ *Operation Time Out : Settings > General Settings > Basic Settings > Operation Time Out (You can specify On or Off.)*

3. Click **OK**.

**Related Information**

➡ "Accessing Web Config" on page 31

# Power Saving Settings During Inactivity

You can set up the time to shift to the power saving mode or to turn the power off when the printer's control panel is not operated for a certain period of time. Set the time depending on your usage environment.

1.  Access Web Config and select the **Device Management** tab > **Power Saving**.

2.  Enter the time for the **Sleep Timer** to switch to power saving mode when inactivity occurs.

    You can set up to 120 minutes by the minute.

    *Note:*
    *You can also set up from the printer's control panel.*

    *Settings > General Settings > Basic Settings > Sleep Timer*

3.  Select the turning off time for the **Power Off Timer**.

    *Note:*
    *You can also set up from the printer's control panel.*

    *Settings > General Settings > Basic Settings > Power Off Timer*

4.  Click **OK**.

**Related Information**

➡ "Accessing Web Config" on page 31

# Setting the Sound

Make the sound settings when operating the control panel, printing, and so on.

*Note:*
*You can also set up from the printer's control panel.*

*Settings > General Settings > Basic Settings > Sound*

1.  Access Web Config and select the **Device Management** tab > **Sound**.

2.  Set up the following items as necessary.

    ❏ Normal Mode

    Set the sound when the printer is set to **Normal Mode**.

    ❏ Quiet Mode

    Set the sound when the printer is set to **Quiet Mode**.

    This is enabled when the following item is enabled.

    Printer's control panel:

    **Settings > General Settings > Printer Settings > Quiet Mode**

3.  Click **OK**.

**Related Information**

➡

# Synchronizing the Date and Time with Time Server

When synchronizing with the time server (NTP server), you can synchronize the time of the printer and the computer on the network. The time server may be operated within the organization or published on the Internet.

When using the CA certificate or Kerberos authentication, time-related trouble can be prevented by synchronizing with the time server.

1. Access Web Config and select the **Device Management** tab > **Date and Time** > **Time Server**.

2. Select **Use** for **Use Time Server**.

3. Enter the time server address for **Time Server Address**.

   You can use IPv4, IPv6 or FQDN format. Enter 252 characters or less. If you do not specify this, leave it blank.

4. Enter **Update Interval (min)**.

   You can set up to 10,800 minutes by the minute.

5. Click **OK**.

   *Note:*
   *You can confirm the connection status with the time server on **Time Server Status**.*

**Related Information**

➡

# Setting the Default Value for Scanning and Copying (User Default Settings)

You can set the default value for the functions.

You can set the following functions.

❏ Scan to Network Folder/FTP

❏ Scan to Email

❏ Scan to Memory Device

❏ Scan to Cloud

❏ Copy

1. Access Web Config and select the functions for which you want to set the default value for the **Scan/Copy** tab > **User Default Settings**.

2. Set each item.

3. Click **OK**.

   If the combination of the value is invalid, it is automatically modified, and then a valid value is set.

**Related Information**

➡ "Accessing Web Config" on page 31

# Using Epson Connect Service

By using Epson Connect service available on the Internet, you can print from your smartphone, tablet PC, or laptop, anytime and practically anywhere.

The features available on the Internet are as follows.

| Email Print | Epson iPrint remote print | Scan to Cloud | Remote Print Driver |
|---|---|---|---|
| ✓ | ✓ | ✓ | ✓ |

See the Epson Connect portal website for details.

https://www.epsonconnect.com/

http://www.epsonconnect.eu (Europe only)

# Using Epson Open Platform

## Epson Open Platform Overview

Epson Open Platform is a platform to use Epson printers with the function provided by the server of the authentication system.

You can acquire the logs of each device and user in cooperation with the server, and configure restrictions on the device and functions that can be used for each user and group. It can be used with Epson Print Admin (Epson Authentication System) or a third-party authentication system.

If you connect an authentication device, you can also perform user authentication using the ID card.

## Configuring Epson Open Platform

Enable Epson Open Platform so that you can use the device from the authentication system.

1. Access Web Config and then select the **Epson Open Platform** tab > **Product key**.

2. Enter a value for each item.

   ❏ Serial Number

   The serial number of the device is displayed.

   ❏ Epson Open Platform Version

   Select the version of Epson Open Platform. The corresponding version varies depending on the authentication system.

   ❏ Enter product key

   Enter the product key obtained from the dedicated Web site. See the Epson Open Platform manual for details such as how to obtain the product key.

3.  Click **Next**.

    A confirmation message is displayed.

4.  Click **OK**.

    The printer is updated.

# Configuring the Authentication Device

You can configure the authentication device used in the authentication system from the **Device Management** tab > **Card Reader**.

For more information, see the manual of the authentication system.

# Product Security Settings

This chapter explains the security settings of the device.

## Introduction of Product Security Features

This section introduces the security function of the Epson Devices.

| Feature name | Feature type | What to set | What to prevent |
|---|---|---|---|
| Setup for the administrator password | Locks the system settings, such as connection setup for network or USB and the user default settings. | An administrator sets a password to the device.<br><br>You can set or change from both Web Config and the printer's control panel.<br><br>You can also make settings for the password policy to set password rules. | Prevent from illegally reading and changing the information stored in the device such as ID, password, network settings, and contacts. Also, reduce a wide range of security risks such as leakage of information for the network environment or security policy. |
| Setup for access control | Limits the functions that can be used on devices, such as print, scan, and copy for each user. If you log on with a user account registered in advance, you are allowed to use certain functions.<br><br>In addition, after logging on from the control panel, you will be logged off automatically if there is no activity for a certain period of time. | Register any user account, and then select the function you want to allow, such as copy and scan.<br><br>You can register up to 10 user accounts. | The risk of leakage and unauthorized viewing of data can be reduced by minimizing the numbers of functions in accordance with the business content and the role of the user. |
| Setup for external interface | Controls the interface, such as USB port and NFC port, that connects to the device. | Enable or disable the USB port for connecting external devices such as USB memory, NFC, and USB connection with the computer. | ❏ USB port control: Reduces the possibility of data being taken through unauthorized scanning of confidential documents.<br><br>❏ NFC: Prevents illegal printing using NFC.<br><br>❏ USB connection of computer: Prevents unauthorized use of the device by prohibiting printing or scanning without going through the network. |

**Product Security Settings**

| Feature name | Feature type | What to set | What to prevent |
|---|---|---|---|
| Setup for processing saved data | Automatically erases job data temporarily stored in the built-in hard disc of the device. You can also safely erase all data stored in the hard disc. | Set whether to automatically delete when the job is finished. You can also erase all the data if you want to discard the device. | By overwriting with a specific pattern, you can prevent someone from restoring and using the data even if the hard disc is removed. |

# Configuring the Administrator Password

When you set the administrator password, you can prevent the users from changing system management settings. You can set and change the administrator password using either Web Config, the printer's control panel, or software (Epson Device Admin). When using the software, see the documentation for each software.

**Related Information**

➡ "Configuring the Administrator Password from the Control Panel" on page 81

➡ "Configuring the Administrator Password Using Web Config" on page 82

➡ "Epson Device Admin" on page 121

## Configuring the Administrator Password from the Control Panel

You can set the administrator password from the printer's control panel.

*Note:*
*When the password policy is available, enter a password that meets the requirement.*

*You can make settings for the password policy by selecting Settings > General Settings > System Administration > Security Settings > Password Policy.*

1. Tap **Settings** on the printer's control panel.

2. Tap **General Settings** > **System Administration** > **Security Settings**.

3. Tap **Admin Settings**.

4. Tap **Admin Password** > **Register**.

5. Enter the new password, and then tap **OK**.

6. Enter the password again, and then tap **OK**.

7. Tap **OK** on the confirmation screen.

    The administrator settings screen is displayed.

8. Tap **Lock Setting**, and then tap **OK** on the confirmation screen.

*Note:*
*You can change or delete the administrator password when you select **Change** or **Reset** on the **Admin Password**screen and enter the administrator password.*

# Configuring the Administrator Password Using Web Config

You can set the administrator password using Web Config.

*Note:*
*When the password policy is available, enter a password that meets the requirement.*

*You can make settings for the password policy by selecting the **Product Security** tab > **Password Policy**.*

1. Access Web Config and select the **Product Security** tab > **Change Administrator Password**.

2. Enter a password to **New Password** and **Confirm New Password**. Enter the user name, if necessary.

    If you want to change the password to new one, enter a current password.
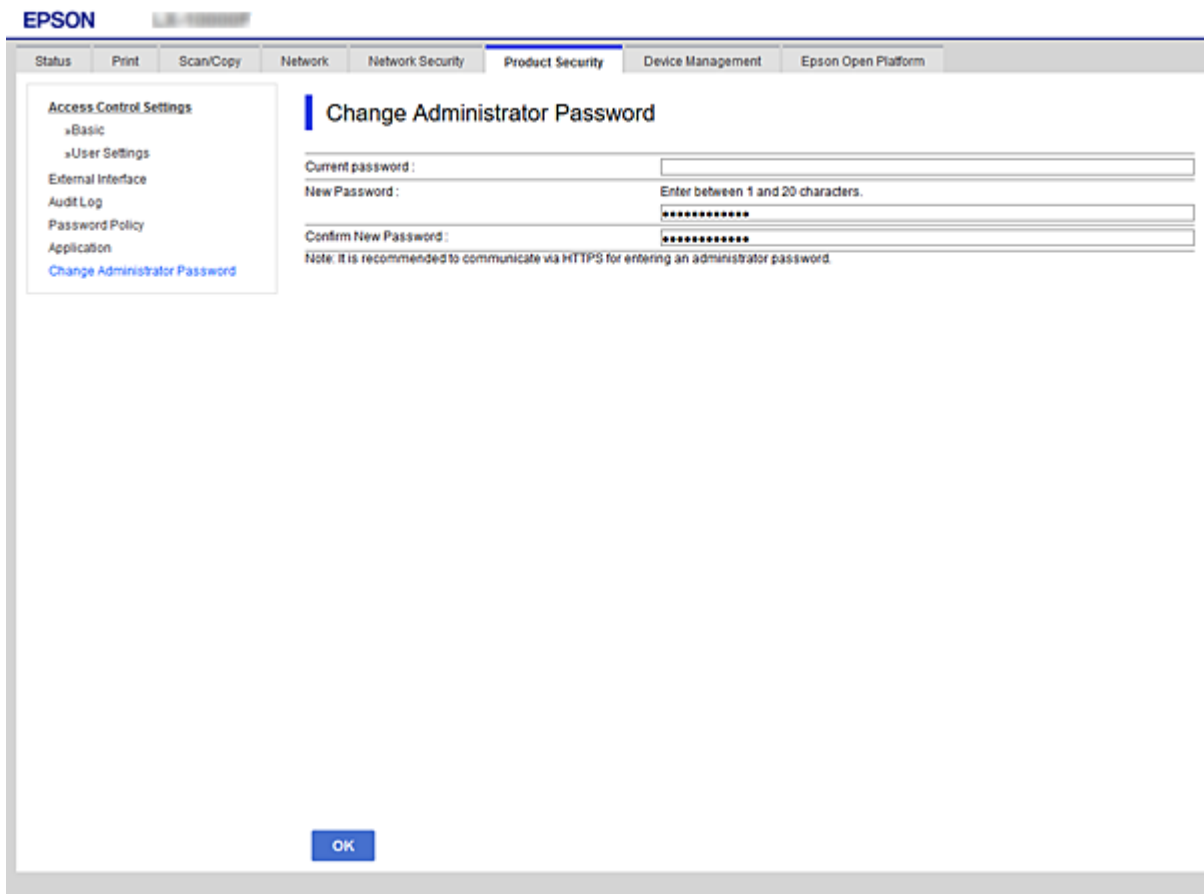

3. Select **OK**.

   *Note:*
   ❏ *To set or change the locked menu items, click **Administrator Login**, and then enter the administrator password.*

   ❏ *To delete the administrator password, click **Product Security** tab > **Delete Administrator Password**, and then enter the administrator password.*

### Related Information

➡

# Controlling the Panel Operation

If you set the administrator password and enable the Lock Setting, you can lock the items related to the printer's system settings so that users cannot change them.

## Lock Setting Items for General Settings Menu

This is a list of the Lock Setting items in **Settings** > **General Settings** on the control panel.

Some functions can be set enabled or disabled individually.

✓ = To be locked.

- = Not to be locked.

*1   : You can enable or disable the lock from **General Settings** > **System Administration** > **Security Settings** > **Restrictions**.

*2   : Even though items on the upper level can be locked by administrator lock, you can still access them from the same name menu of **Settings** > **Printer Status/Print**.

*3   : Even though items on the upper level can be locked by administrator lock, you can still access them from Home >

    📶 | 📶   > **Description** > **When you cannot connect to the network**.

*4   : Even though items on the upper level can be locked by administrator lock, you can still access them from the same name menu of **Settings** > **Contacts Manager**.

**Related Information**

# Other Lock Setting Items

Besides the General Settings menu, Lock Setting would be enabled to the items below.

❏ Presets

    ❏ Add New

    ❏ Delete

    ❏ Rename

    ❏ Add or remove to Home screen

    ❏ Changing user settings

❏ **Settings** > **User Settings**.

**Related Information**

➡ "Registering Settings to Preset" on page 98

➡ "Menu Options for User Settings" on page 143

# Operating Display and Function Setting Individually

For the some target items of the Lock Setting, you can individually set whether they are enabled or disabled.

You can set each user's availability as necessary, such as registering or changing the contacts, displaying job history, etc.

1. Select **Settings** on the printer's control panel.

2. Select **General Settings** > **System Administration** > **Security Settings**.

3. Select **Restrictions**.

4. Select the item for the function that you want to change the setting of, and then set to **On** or **Off**.

## Items That Can Be Set Individually

The administrator can permit the items below to display and change settings individually.

❏ Job log access : **Job/Status** > **Log**

Control the display of the status monitor's job history. Select **On** to permit the job history to display.

❏ Access to Register/Delete Contacts : **Settings** > **Contacts Manager** > **Add/Edit/Delete**

Control the registering and changing of contacts. Select **On** to register or change the contacts.

❏ Access to Print Save History of Scan to Network Folder/FTP : **Scan** > **Network Folder/FTP** > **Menu** > **Print Recently Saved**

Control the printing of save history for scan to network folder function. Select **On** to permit the printing.

❏ Access to Recent of Scan to Email : **Scan** > **Email** > **Recipient** > **Recent**

Control the display of the history for the scan to mail function. Select **On** to display the history.

❏ Access to Show Sent History of Scan to Email : **Scan** > **Email** > **Menu** > **Show Recently Sent**

Control the display of the history of email sending for the scan to mail function. Select **On** to display the history of email sending.

❏ Access to Print Sent History of Scan to Email : **Scan** > **Email** > **Menu** > **Print Recently Sent**

Control the printing of the history of email sending for the scan to mail function. Select **On** to permit the printing.

❏ Access to Language : **Settings** > **Language**

Control the changing of the language displayed on the control panel. Select **On** to change the languages.

❏ Access to Thick Paper : **Settings** > **General Settings** > **Printer Settings** > **Thick Paper**

Control the changing of the settings of the Thick Paper function. Select **On** to change the settings.

❏ Access to Quiet Mode : **Settings** > **General Settings** > **Printer Settings** > **Quiet Mode**

Control the changing of settings of the Quiet Mode function. Select **On** to change the settings.

❏ Access to Print Speed Priority: **Settings** > **General Settings** > **Printer Settings** > **Print Speed Priority**

Control the changing of settings of the Print Speed Priority function. Select **On** to change the settings.

❏ Access to Print Speed Priority: **Settings** > **General Settings** > **Basic Settings** > **Detect Double Feed**

Control the changing of settings of the Detect Double Feed function. Select **On** to change the settings.

❏ Protection of Personal Data :

Control the display of the destination information on speed dial registration. Select **On** to display the destination as (***).

❏ Access to Copy Output Tray: **Settings** > **General Settings** > **Printer Settings** > **Output: Copy**

Control the changing of where to output when copying. Select **On** to change the settings.

❏ Accept Power Off:

Control the permission to turn off the printer. Select **On** to permit it to turn off.

**Related Information**

➡

# Restricting Available Features

You can register user accounts on the printer, link them with functions, and control functions that users can use.

When enabling access control, the user can use functions such as copy, etc. by entering the password on the printer's control panel and logging in to the printer.

The unavailable functions will be grayed out and cannot be selected.

From the computer, when you register the authentication information to the printer driver or scanner driver, you will be able to print or scan. For details of the driver settings, see the driver's help or manual.

## Configuring Access Control

To use access control, create the user account and enable the access control function.

# Creating the User Account

Create the user account for access control.

1.  Access Web Config and select the **Product Security** tab > **Access Control Settings** > **User Settings**.

2.  Click **Add** for the number you want to register.

> ❗ *Important:*
>
> *When using the printer with the authentication system of Epson or other companies, register the user name of the restriction setting in number 2 to number 10.*
>
> *Application software such as the authentication system uses number one, so that the user name is not displayed on the printer's control panel.*

3.  Set each item.

    ❏ User Name :

    Enter the name displayed on the user name list between 1 and 14 characters long using alphanumeric characters.

    ❏ Password :

    Enter a password between 0 and 20 characters long in ASCII (0x20-0x7E). When initializing the password, leave it blank.

    ❏ Select the check box to enable or disable each function.

    Select the function that you permit to use.

    *Note:*
    *When the password policy is available, enter a password that meets the requirement.*

    *You can make settings for the password policy by selecting the **Product Security** tab > **Password Policy**.*

4.  Click **Apply**.

    Return to the user setting list after a specific length of time.

    Check that the user name you registered on **User Name** is displayed and changed **Add** to **Edit**.

### Editing the User Account

Edit the account registered to access control.

1.  Access Web Config and select the **Product Security** tab > **Access Control Settings** > **User Settings**.

2.  Click **Edit** for the number you want to edit.

3.  Change each item.

4.  Click **Apply**.

    Return to the user setting list after a specific length of time.

### Deleting the User Account

Delete the account registered to access control.

1. Access Web Config and select the **Product Security** tab > **Access Control Settings** > **User Settings**.

2. Click **Edit** for the number you want to delete.

3. Click **Delete**.

> **❗ Important:**
>
> *When clicking **Delete**, the user account will be deleted without a confirmation message. Take care when deleting the account.*

Return to the user setting list after a specific length of time.

## Enabling Access Control

When enabling access control, only the registered user will be able to use the printer.

1. Access Web Config and select the **Product Security** tab > **Access Control Settings** > **Basic**.

2. Select **Enables Access Control**.

   If you select **Allows printing and scanning without authentication information**, you can print or scan from the drivers that are not set with the authentication information. Set it when you want to control the operation only from the printer's control panel and to permit printing and scanning from the computers.

3. Click **OK**.

   The completion message is displayed after a certain period of time.

   Confirm that the icons such as copy and scan are grayed out on the printer's control panel.

# Disabling the External Interface

You can disable the interface that is used to connect the device to the printer. Make the restriction settings to restrict printing and scanning other than via network.

*Note:*
*You can also make the restriction settings on the printer's control panel.*

❏ *Memory Device : **Settings** > **General Settings** > **Printer Settings** > **Memory Device***

❏ *NFC : **Settings** > **General Settings** > **Network Settings** > **Advanced** > **NFC***

❏ *PC Connection via USB : **Settings** > **General Settings** > **Printer Settings** > **PC Connection via USB***

1. Access Web Config and select the **Product Security** tab > **External Interface**.

2. Select **Disable** on the functions you want to set.

   Select **Enable** when you want to cancel controlling.

   ❏ Memory Device

   Prohibit saving the data to external memory via USB port for external device connection.

   ❏ NFC

   Disable the NFC interface built in the control panel.

❏ PC Connection via USB

You can restrict the usage of the USB connection from the computer. If you want to restrict it, select **Disable**.

3. Click **OK**.

4. Check that the disabled port cannot be used.

❏ Memory Device

Confirm that there is no response when connecting a storage device such as USB memory to the external interface USB port.

❏ NFC

Confirm that there is no response when holding the device that supports the NFC function like a smart phone over the printer.

❏ PC Connection via USB

If the driver was installed on the computer

Connect the printer to the computer using a USB cable, and then confirm that the printer does not print and scan.

If the driver was not installed on the computer

Windows:

Open the device manager and keep it, connect the printer to the computer using a USB cable, and then confirm that the device manager's display contents stays unchanged.

Mac OS:

Connect the printer to the computer using a USB cable, and then confirm that the printer is not listed if you want to add the printer from **Printers & Scanners**.

**Related Information**

➡

# Making Settings for Processing Saved Data

You can make settings for processing data stored in the internal hard disc.

Jobs for printing, copying, and scanning are temporarily saved to the hard disc in order to handle the data for authenticated printing and the large amount of copying, scanning, printing, etc. Make settings to safely erase this data.

**Sequential Deletion from Hard Disk**

When enabled, the target data is erased sequentially when it becomes unnecessary, such as when printing or scanning is completed. The target to be deleted is data written while this function is enabled.

Because access to the hard disc is necessary, the time to enter power saving mode will be delayed.

**Erase All Memory**

Erases all data on the hard disc. You cannot perform other operations or turn off the device during formatting.

❏ High Speed: Erases all data with a dedicated erase command.

❏ Overwrite: Erases all data with a dedicated erase command, and overwrites other data in all areas to erase all data.

# Making Settings for Sequential Deletion

*Note:*
*You can also make settings from the device's control panel.*

1. Access Web Config and select the **Device Management** > **Stored Data**.

2. Select **ON** for **Sequential Deletion from Hard Disk**.

3. Click **OK**.

# Formatting the Internal Hard Disc

1. Tap **Settings** on the home screen on the printer's control panel.

2. Tap **General Settings** > **System Administration** > **HDD Erase Settings**.

3. Tap **Erase All Memory**.

4. Tap **High Speed** or **Overwrite** according to the purpose.

5. Tap **Yes** on the confirmation screen.

6. Tap **OK** on the completion screen.

# Operation and Management Settings

This chapter explains the items related to the daily operations and management of the device.

## Logging on to the Printer as an Administrator

If the administrator password is set to the printer, you need to log on as an administrator to operate the locked menu items.

### Logging on the Printer Using the Control Panel

1. Tap .

2. Tap **Administrator**.

3. Enter the administrator password.

4. Tap **OK**.

    is displayed when being authenticated, then you can operate the locked menu items.

   Tap  to log off.

*Note:*
*When you select On for Settings > General Settings > Basic Settings > Operation Time Out, you log off automatically after a specific length of time if there is no activity on the control panel.*

### Logging on to the Printer Using Web Config

When you log in to Web Config as an administrator, you can operate items that are set in the Lock Setting.

1. Enter the printer's IP address into a browser to run Web Config.

2. Click **Administrator Login**.

3. Enter the user name and administrator password in **User Name** and **Current password**.

4. Click **OK**.

   The locked items and **Administrator Logout** are displayed when being authenticated.

   Click **Administrator Logout** to log off.

*Note:*
*When you select ON for the Device Management tab > Control Panel > Operation Timeout, you log off automatically after a specific length of time if there is no activity on the control panel.*

# Confirm Information of the Printer

## Checking the Information from the Control Panel

You can check and print the following information from the control panel.

❏ Number of printed pages

**Settings** > **Print Counter**

You can check the total number of printed pages.

❏ Supply

**Settings** > **Supply Status**

You can check the information for the ink and maintenance box.

❏ Status sheet for the product

**Settings** > **Printer Status/Print** > **Print Status Sheet**

You can print a status sheet, such as printer information and consumables information.

❏ Network information

**Settings** > **General Settings** > **Network Settings** > **Network Status**

**Settings** > **Printer Status/Print** > **Network**

You can check the network-related information such as network connection status, mail server settings, etc. and print the network status sheet.

❏ Network connection report

**Settings** > **General Settings** > **Network Settings** > **Connection Check**

Home > 📟 | 📶 > **Description** > **When you cannot connect to the network**

You can diagnose the network connection status of the printer and print the report.

❏ Network connection status

Home > 📟 | 📶 > **Router**

You can check the connection status for Wired / Wireless LAN.

## Checking the Information from Web Config

You can check the following information of the operating printer from **Status** by using Web Config.

❏ Product Status

Check the language, status, cloud service, product number, MAC address, etc.

❏ Network Status

Check the information of the network connection status, IP address, DNS server, etc.

❏ Maintenance

Check the first day of printings, ink replacement count, printed pages, printing count for each language, scanning count, etc.

❏ Hardware Status

Check the status of each Wi-Fi, etc.

❑ Job History

Check the job log for a print job, reception job, and transmission job.

❑ Panel Snapshot

Display a screen image snapshot that is displayed on the control panel of the device.

# Receiving Email Notifications When Events Occur

## About Email Notifications

This is the notification function that, when events such as printing stop and printer error occur, send the email to the specified address.

You can register up to five destinations and set the notification settings for each destination.

To use this function, you need to set up the mail server before setting up notifications.

**Related Information**

➡ "Configuring a Mail Server" on page 40

## Configuring Email Notification

Configure email notification by using Web Config.

1. Access Web Config and select the **Device Management** tab > **Email Notification**.

2. Enter the email address for sending the notification email.

   Use A-Z a-z 0-9 ! # $ % & ' * + - . /= ? ^ _ { | } ~ @, and enter between 1 and 255 characters.

3. Select the language for the email notifications.

4. Select the check box on the event for which you want to receive a notification.

   The number of **Notification Settings** is linked to the destination number of **Email Address Settings**.

   Example :

**Operation and Management Settings**

If you want a notification sent to the email address set for number 1 in **Email Address Settings** when the printer is out of paper, select the check box column **1** in line **Paper out**.

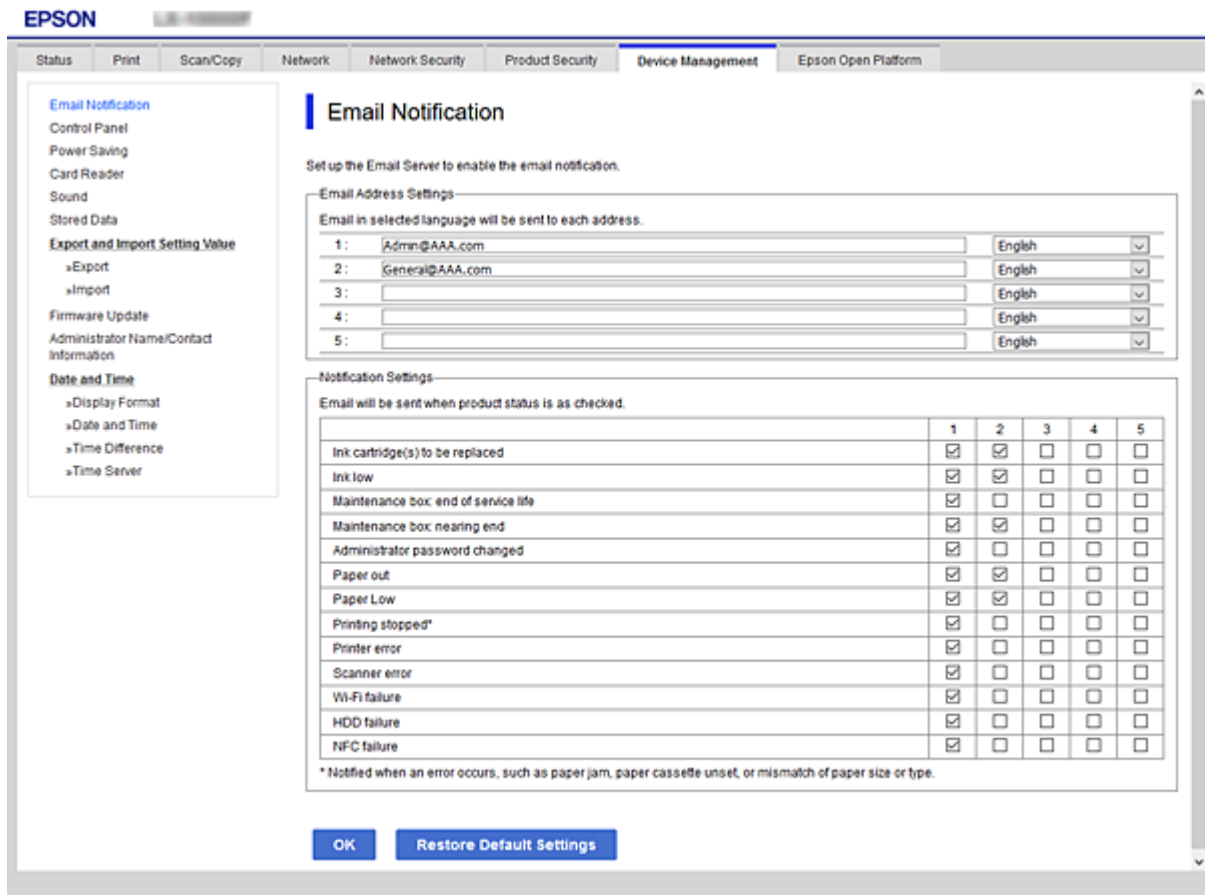

5. Click **OK**.

   Confirm that an email notification will be sent by causing an event.

   Example : Print by specifying the Paper Source where paper is not set.

**Related Information**

➡

➡

## Items for Email Notification

| Items | Settings and Explanation |
|---|---|
| Ink supply unit(s) to be replaced | Notice when the ink is expended. |
| Ink low | Notice when the ink is nearing expended. |
| Maintenance box: end of service life | Notice when the maintenance box is full. |
| Maintenance box: nearing end | Notice when the maintenance box is nearing full. |
| Administrator password changed | Notice when administrator password has been changed. |

**Operation and Management Settings**

| Items | Settings and Explanation |
|---|---|
| Paper out | Notice when the paper-out error has occurred in the specified paper source. |
| Paper Low | Notice when the paper-low error has occurred in the specified paper source. |
| Printing stopped* | Notice when the printing is stopped due to paper jam or paper cassette not set. |
| Printer error | Notice when the printer error has occurred. |
| Scanner error | Notice when the scanner error has occurred. |
| Wi-Fi failure | Notice when the error of the wireless LAN interface has occurred. |
| HDD failure | Notice when the error of the internal hard disc. |
| NFC failure | Notice when the error of the NFC substrate has occurred. |

# Updating Firmware

When new firmware is available, updating the firmware of the printer improves the function or resolves the problem.

## Updating the Printer's Firmware using the Control Panel

If the printer can be connected to the Internet, you can update the printer's firmware using the control panel. You can also set the printer to regularly check for firmware updates and notify you if any are available.

1. Select **Settings** on the home screen.

2. Select **General Settings** > **System Administration** > **Firmware Update** > **Update**.

   *Note:*
   *Select **Notification** > **On** to set the printer to regularly check for available firmware updates.*

3. Select **Start Checking**.

   The printer starts searching for available updates.

4. If a message is displayed on the LCD screen informing you that a firmware update is available, follow the on-screen instructions to start the update.

   > *Important:*
   > ❏ *Do not turn off or unplug the printer until the update is complete; otherwise, the printer may malfunction.*
   >
   > ❏ *If the firmware update is not completed or is unsuccessful, the printer does not start up normally and "Recovery Mode" is displayed on the LCD screen the next time the printer is turned on. In this situation, you need to update the firmware again using a computer. Connect the printer to the computer with a USB cable. While "Recovery Mode" is displayed on the printer, you cannot update the firmware over a network connection. On the computer, access your local Epson website, and then download the latest printer firmware. See the instructions on the website for the next steps.*

## Updating Firmware Using Web Config

When the printer can connect to the Internet, you can update the firmware from Web Config.

1. Access Web Config and select the **Device Management** tab > **Firmware Update**.

2. Click **Start**.

   The firmware confirmation starts, and the firmware information is displayed if the updated firmware exists.

3. Click **Start**, and follow the on-screen instructions.

   *Note:*
   *You can also update the firmware using Epson Device Admin. You can visually confirm the firmware information on the device list. It is useful when you want to update multiple devices' firmware. See the Epson Device Admin guide or help for more details.*

### Related Information

➡ "Accessing Web Config" on page 31
➡ "Epson Device Admin" on page 121

## Updating Firmware without Connecting to the Internet

You can download the device's firmware from Epson website on the computer, and then connect the device and the computer by USB cable to update the firmware. If you cannot update over the network, try this method.

1. Access Epson website and download the firmware.

2. Connect the computer that contains the downloaded firmware to the printer by USB cable.

3. Double-click the downloaded .exe file.

   Epson Firmware Updater starts.

4. Follow the on-screen instructions.

# Registering Settings to Preset

You can save settings such as scan and copy with a name. The settings registered here are displayed in the **Presets** on the printer's control panel. Register it after finishing the settings for each function.

You can set up the following functions.

❏ Scan to Network Folder/FTP

❏ Scan to Email

❏ Scan to Memory Device

❏ Scan to Cloud

❏ Copy

1. Access Web Config and select **Scan/Copy** tab > **Presets**.

2.  Select the registered number and click **Edit**.

3.  Select **Type**.

    *Note:*
    *If you want to change the **Type** after registering, delete the registered preset and then register it again.*

4.  Click **Next**.

5.  Set up each item.

    Enter a **Name** between 1 and 30 characters in Unicode (UTF-8).

6.  Click **OK**.

    If the combination of the value is invalid, a valid value that is automatically modified is applied.

**Related Information**

➡

# Backing Up the Settings

You can export the setting value set from Web Config to the file. You can use it for backing up the contacts, setting values, replacing the printer, etc.

The exported file cannot be edited because it is exported as a binary file.

## Export the settings

Export the setting for the printer.

1.  Access Web Config, and then select the **Device Management** tab > **Export and Import Setting Value** > **Export**.

2.  Select the settings that you want to export.

    Select the settings you want to export. If you select the parent category, subcategories are also selected. However, subcategories that cause errors by duplicating within the same network (such as IP addresses and so on) cannot be selected.

3.  Enter a password to encrypt the exported file.

    You need the password to import the file. Leave this blank if you do not want to encrypt the file.

4.  Click **Export**.

    > ❗ *Important:*
    >
    > *If you want to export the printer's network settings such as the device name and IPv6 address, select **Enable to select the individual settings of device** and select more items. Only use the selected values for the replacement printer.*

**Related Information**

➡ "Accessing Web Config" on page 31

# Import the settings

Import the exported Web Config file to the printer.

> ⚠ *Important:*
>
> *When importing values that include individual information such as a printer name or IP address, make sure the same IP address does not exist on the same network. If the IP address overlaps, the printer does not reflect the value.*

1. Access Web Config, and then select the **Device Management** tab > **Export and Import Setting Value** > **Import**.

2. Select the exported file, and then enter the encrypted password.

3. Click **Next**.

4. Select the settings that you want to import, and then click **Next**.

5. Click **OK**.

The settings are applied to the printer.

# Solving Problems

## Hints to Solving Problems

❏ Checking the error message

When trouble has occurred, first check whether there are any messages on the printer's control panel or driver screen. If you have the notification email set when the events occur, you can promptly learn the status.

❏ Network connection report

Diagnose the network and the printer status, and then print the result.

You can find the diagnosed error from the printer side.

❏ Checking the communication status

Check the communication status of server computer or client computer by using the command such as ping and ipconfig.

❏ Connection test

For checking the connection between the printer to the mail server, perform the connection test from the printer. Also, check the connection from the client computer to the server to check the communication status.

❏ Initializing the settings

If the settings and communication status show no problem, the problems may be solved by disabling or initializing the network settings of the printer, and then setting up again.

## Checking the Status of the Printer

To identify the cause of trouble, check the status of the printer and network.

### Checking the Error Message

#### Checking the Error Message from Email Notification

When setting the email notification, check that the error message is sent from the printer.

If instructions for handling the problem are in the email notification, please follow them.

**Related Information**

➡ "Receiving Email Notifications When Events Occur" on page 95

#### Checking Messages on the LCD Screen

If an error message is displayed on the LCD screen, follow the on-screen instructions or the solutions below to solve the problem.

**Solving Problems**

| Error Messages | Causes and Solutions |
|---|---|
| You need to replace the following ink cartridge(s). Confirm the procedure, and then replace them. | ❏ **Causes :**<br>The ink is expended.<br><br>❏ **Solutions :**<br>To ensure you receive premium print quality and to help protect your print head, a variable ink safety reserve remains in the cartridge when your printer indicates it is time to replace the cartridge. Replace the cartridge when you are prompted to do so. |
| The maintenance box is not recognized. Install it correctly. | ❏ **Causes :**<br>The Maintenance Box is not installed correctly.<br><br>❏ **Solutions :**<br>Check the maintenance box's installing status, and then install it correctly. |
| The Maintenance Box is at the end of its service life. You need to replace it. | ❏ **Causes :**<br>The Maintenance Box is at the end of its service life.<br><br>❏ **Solutions :**<br>Replace the Maintenance Box according to the guidance. |
| Remove and reinstall the Maintenance Box. | ❏ **Causes :**<br>The Maintenance Box is not recognized correctly.<br><br>❏ **Solutions :**<br>Remove the Maintenance Box once, and then install it again. If it is not recognized after all that, replace it to a new Maintenance Box. |
| The combination of the IP address and the subnet mask is invalid. See your documentation for more details. | ❏ **Causes :**<br>The combination of the IP address you set is invalid.<br><br>❏ **Solutions :**<br>Enter the correct IP address or default gateway. |
| To use cloud services, update the root certificate from the Epson Web Config utility. | ❏ **Causes :**<br>The root certificate used for cloud services is expired.<br><br>❏ **Solutions :**<br>Run Web Config, and then update the root certificate.<br>**Network Security** - **Root Certificate Update** |
| Recovery Mode | ❏ **Causes :**<br>Failed to update firmware and cannot return to the normal mode.<br><br>❏ **Solutions :**<br>The printer has started in recovery mode because the firmware update failed. Follow the steps below to try to update the firmware again.<br><br>1. Connect the computer and the printer with a USB cable. (During recovery mode, you cannot update the firmware over a network connection.)<br><br>2. Visit your local Epson website for further instructions. |

# Error Code on the Status Menu

If a job does not complete successfully, check the error code displayed on the history of each job. You can check the error code by selecting **Job/Status**, and then selecting **Job Status**. See the following table to find the problem and its solution.

| Code | Problem | Solution |
|------|---------|----------|
| 001 | The product was turned off by a power failure. | - |
| 110 | The job was printed on one side only because the paper loaded does not support double sided printing. | If you want to perform 2-sided printing, load paper that supports 2-sided printing. |
| 301 | There is not enough storage space available to save the data in the memory device. | ❑ Increase the storage space in the memory device.<br>❑ Reduce the number of documents.<br>❑ Lower the scanning resolution or increase the compression ratio to reduce the size of the scanned image. |
| 302 | The memory device is write-protected. | Disable write protection on the memory device. |
| 303 | No folder has been created to save the scanned image. | Insert another memory device. |
| 304 | The memory device has been removed. | Reinsert the memory device. |
| 305 | An error occurred while saving the data to the memory device. | If the external device is accessed from a computer, wait for a while and then try again. |
| 306 | The memory is full. | Wait until other ongoing jobs are finished. |
| 307 | The scanned image size exceeds the maximum limit. (Scan to a Memory Device) | Lower the scanning resolution or increase the compression ratio to reduce the size of the scanned image. |
| 311 | A DNS error has occurred. | ❑ Tap **Settings** > **General Settings** > **Network Settings** > **Advanced** > **TCP/IP**, and then check the DNS settings.<br>❑ Check the DNS settings for the server, the computer, or the access point. |
| 312 | An authentication error has occurred. | Tap **Settings** > **General Settings** > **Network Settings** > **Advanced** > **Email Server** > **Server Settings**, and then check the server settings. |
| 313 | A communication error has occurred. | ❑ Print a network connection report to check if the printer is connected to the network.<br>❑ Tap **Settings** > **General Settings** > **Network Settings** > **Advanced** > **Email Server** > **Server Settings** to check the email server settings. You can check the cause of the error by running connection check.<br>❑ The authentication method of the settings and the email server may not match. When you select **Off** as the authentication method, make sure the authentication method of the email server is set to None. |

## Solving Problems

| Code | Problem | Solution |
|---|---|---|
| 314 | The data size exceeds the maximum size for attached files. | ❏ Increase the **Attached File Max Size** setting in the scan settings.<br><br>❏ Lower the scanning resolution or increase the compression ratio to reduce the size of the scanned image. |
| 315 | The memory is full. | Retry after other ongoing jobs are finished. |
| 321 | A DNS error has occurred. | ❏ Tap **Settings** > **General Settings** > **Network Settings** > **Advanced** > **TCP/IP**, and then check the DNS settings.<br><br>❏ Check the DNS settings for the server, the computer, or the access point. |
| 322 | An authentication error has occurred. | Check the **Location** settings. |
| 323 | A communication error has occurred. | ❏ Check the **Location** settings.<br><br>❏ Print a network connection report to check if the printer is connected to the network. |
| 324 | A file with the same name already exists in the specified folder. | ❏ Delete the file with the same name.<br><br>❏ Change the file name prefix in **File Settings**. |
| 325<br><br>326 | There is not enough storage space available in the specified folder. | ❏ Increase the storage space in the specified folder.<br><br>❏ Reduce the number of documents.<br><br>❏ Lower the scanning resolution or increase the compression ratio to reduce the size of the scanned image. |
| 327 | The memory is full. | Wait until other ongoing jobs are finished. |
| 328 | The destination was wrong or the destination does not exist. | Check the **Location** settings. |
| 329 | The scanned image size exceeds the maximum limit. (Scan to a Network Folder or FTP Server) | Lower the scanning resolution or increase the compression ratio to reduce the size of the scanned image. |
| 331 | A communication error occurred. | Print a network connection report to check if the printer is connected to the network. |
| 332 | There is not enough storage space available to save the scanned image in the destination storage. | Reduce the number of documents. |
| 333 | The destination could not be found because the destination information was uploaded to the server before sending the scanned image. | Select the destination again. |
| 334 | An error occurred while sending the scanned image. | - |
| 341 | A communication error has occurred. | ❏ Check the connections for the printer and the computer. If you are connecting over a network, print a network connection report to check if the printer is connected to the network.<br><br>❏ Make sure that Document Capture Pro is installed on the computer. |

## Checking the Panel Display of the Remote Printer

You can check the panel display of the remote printer by using Web Config.

1. Run Web Config of the printer that you want to check.

   When you receive the email notification, you can run Web Config from the URL on the email.

2. Select **Status** tab > **Panel Snapshot**.

   The current panel of the printer is displayed on Web Config.

   To update, click **Refresh**.

# Printing a Network Connection Report

You can print a network connection report to check the status between the printer and the wireless router.

1. Load papers.

2. Select **Settings** on the home screen.

3. Select **General Settings** > **Network Settings** > **Connection Check**.

   The connection check starts.

4. Select **Print Check Report**.

5. Print the network connection report.

   If an error has occurred, check the network connection report, and then follow the printed solutions.

6. Close the screen.

**Related Information**

➡ "Messages and Solutions on the Network Connection Report" on page 106

# Messages and Solutions on the Network Connection Report

Check the messages and error codes on the network connection report, and then follow the solutions.

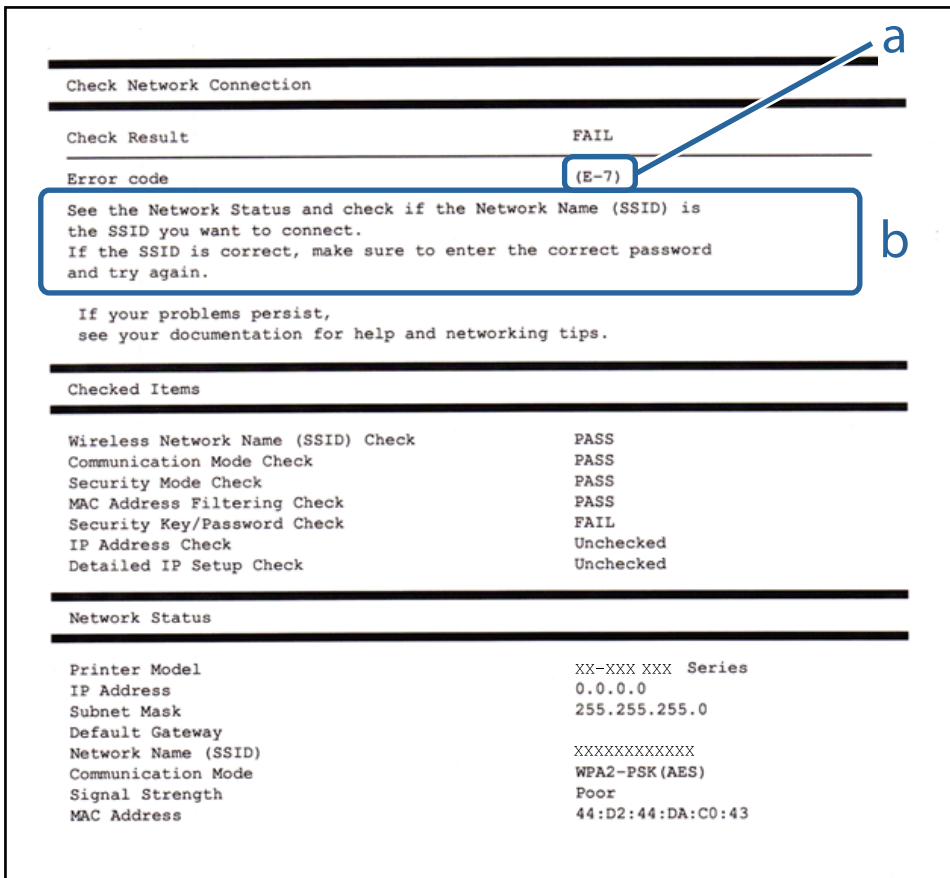

a. Error code

b. Messages on the Network Environment

## E-1

**Solutions:**

❏ Make sure the Ethernet cable is securely connected to your printer and to your hub or other network device.

❏ Make sure your hub or other network device is turned on.

❏ If you want to connect the printer by Wi-Fi, make Wi-Fi settings for the printer again because it is disabled.

## E-2, E-3, E-7

**Solutions:**

❏ Make sure your wireless router is turned on.

❏ Confirm that your computer or device is connected correctly to the wireless router.

❏ Turn off the wireless router. Wait for about 10 seconds, and then turn it on.

❏ Place the printer closer to your wireless router and remove any obstacles between them.

❏ If you have entered the SSID manually, check if it is correct. Check the SSID from the **Network Status** part on the network connection report.

❏ If an wireless router has multiple SSIDs, select the SSID that is displayed. When the SSID is using a non-compliant frequency, the printer does not display them.

❏ If you are using push button setup to establish a network connection, make sure your wireless router supports WPS. You cannot use push button setup if your wireless router does not support WPS.

❏ Makes sure your SSID uses only ASCII characters (alphanumeric characters and symbols). The printer cannot display an SSID that contains non-ASCII characters.

❏ Makes sure you know your SSID and password before connecting to the wireless router. If you are using a wireless router with its default settings, the SSID and password are located on a label on the wireless router. If you do not know your SSID and password, contact the person who set up the wireless router, or see the documentation provided with the wireless router.

❏ If you are connecting to an SSID generated from a tethering smart device, check for the SSID and password in the documentation provided with the smart device.

❏ If your Wi-Fi connection suddenly disconnects, check for the conditions below. If any of these conditions are applicable, reset your network settings by downloading and running the software from the following website.

http://epson.sn > **Setup**

  ❏ Another smart device was added to the network using push button setup.

  ❏ The Wi-Fi network was set up using any method other than push button setup.

## E-5

**Solutions:**

Make sure the wireless router's security type is set to one of the following. If it is not, change the security type on the wireless router, and then reset the printer's network settings.

❏ WEP-64 bit (40 bit)

❏ WEP-128 bit (104 bit)

❏ WPA PSK (TKIP/AES)*

❏ WPA2 PSK (TKIP/AES)*

❏ WPA (TKIP/AES)

❏ WPA2 (TKIP/AES)

\*     WPA PSK is also known as WPA Personal. WPA2 PSK is also known as WPA2 Personal.

## E-6

**Solutions:**

❏ Check if MAC address filtering is disabled. If it is enabled, register the printer's MAC address so that it is not filtered. See the documentation provided with the wireless router for details. You can check the printer's MAC address from the **Network Status** part on the network connection report.

**Solving Problems**

❏ If your wireless router is using shared authentication with WEP security, make sure the authentication key and index are correct.

❏ If the number of connectable devices on the wireless router is less than the number of network devices that you want to connect, make settings on the wireless router to increase the number of connectable devices. See the documentation provided with the wireless router to make settings.

## E-8

**Solutions:**

❏ Enable DHCP on the wireless router if the printer's Obtain IP Address setting is set to **Auto**.

❏ If the printer's Obtain IP Address setting is set to Manual, the IP address you manually set is invalid due to out of range (for example: 0.0.0.0). Set a valid IP address from the printer's control panel or by using Web Config.

## E-9

**Solutions:**

Check the following.

❏ Devices are turned on.

❏ You can access the Internet and other computers or network devices on the same network from the devices you want to connect to the printer.

If still does not connect your printer and network devices after confirming the above, turn off the wireless router. Wait for about 10 seconds, and then turn it on. Then reset your network settings by downloading and running the installer from the following website.

http://epson.sn > **Setup**

## E-10

**Solutions:**

Check the following.

❏ Other devices on the network are turned on.

❏ Network addresses (IP address, subnet mask, and default gateway) are correct if you have set the printer's Obtain IP Address to Manual.

Reset the network address if they are incorrect. You can check the IP address, subnet mask, and default gateway from the **Network Status** part on the network connection report.

If DHCP is enabled, change the printer's Obtain IP Address setting to **Auto**. If you want to set the IP address manually, check the printer's IP address from the **Network Status** part on the network connection report, and then select Manual on the network settings screen. Set the subnet mask to [255.255.255.0].

If still does not connect your printer and network devices, turn off the wireless router. Wait for about 10 seconds, and then turn it on.

# E-11

**Solutions:**

Check the following.

❏ The default gateway address is correct if you set the printer's TCP/IP Setup setting to Manual.

❏ The device that is set as the default gateway is turned on.

Set the correct default gateway address. You can check the default gateway address from the **Network Status** part on the network connection report.

# E-12

**Solutions:**

Check the following.

❏ Other devices on the network are turned on.

❏ The network addresses (IP address, subnet mask, and default gateway) are correct if you are entering them manually.

❏ The network addresses for other devices (subnet mask and default gateway) are the same.

❏ The IP address does not conflict with other devices.

If still does not connect your printer and network devices after confirming the above, try the following.

❏ Turn off the wireless router. Wait for about 10 seconds, and then turn it on.

❏ Make network settings again using the installer. You can run it from the following website.

   http://epson.sn > **Setup**

❏ You can register several passwords on a wireless router that uses WEP security type. If several passwords are registered, check if the first registered password is set on the printer.

# E-13

**Solutions:**

Check the following.

❏ Network devices such as a wireless router, hub, and router are turned on.

❏ The TCP/IP Setup for network devices has not been set up manually. (If the printer's TCP/IP Setup is set automatically while the TCP/IP Setup for other network devices is performed manually, the printer's network may differ from the network for other devices.)

If it still does not work after checking the above, try the following.

❏ Turn off the wireless router. Wait for about 10 seconds, and then turn it on.

❏ Make network settings on the computer that is on the same network as the printer using the installer. You can run it from the following website.

   http://epson.sn > **Setup**

❏ You can register several passwords on a wireless router that uses the WEP security type. If several passwords are registered, check if the first registered password is set on the printer.

**Solving Problems**

## Message on the Network Environment

| Message | Solution |
|---------|----------|
| *Multiple network names (SSID) that match your entered network name (SSID) have been detected. Confirm network name (SSID). | The same SSID may be set on several access points. Check the settings on the access points, and change the SSID. |
| The Wi-Fi environment needs to be improved. Turn the wireless router off and then turn it on. If the connection does not improve, see the documentation for the wireless router. | After moving the printer closer to the access point and removing any obstacles between them, turn off the access point. Wait for about 10 seconds, and then turn it on. If it still does not connect, see the documentation supplied with the access point. |
| *No more devices can be connected. Disconnect one of the connected devices if you want to add another one. | Computer and smart devices that can be connected simultaneously are connected in full in the Wi-Fi Direct (Simple AP) connection. To add another computer or smart device, disconnect one of the connected devices first. You can confirm the number of wireless devices which can be connected simultaneously and the number of connected devices by checking the network status sheet or the printer's control panel. |

# Checking the Communication Status

Check whether the communication between the printer and the computer is correct, and lead to solve the problems.

## Checking the Log for Server and Network Device

If trouble occurred in the network connection, you may be able to identify the cause by checking the log for the mail server or the LDAP server or the status by using the system log for the network device, such as a router, or commands.

## Printing a Network Status Sheet

You can check the detailed network information by printing it.

1. Load papers.

2. Select **Settings** on the home screen.

3. Select **General Settings** > **Network Settings** > **Network Status**.

4. Select **Print Status Sheet**.

5. Check the message, and then print the network status sheet.

6. Close the screen.

   The screen automatically closes after a specific length of time.
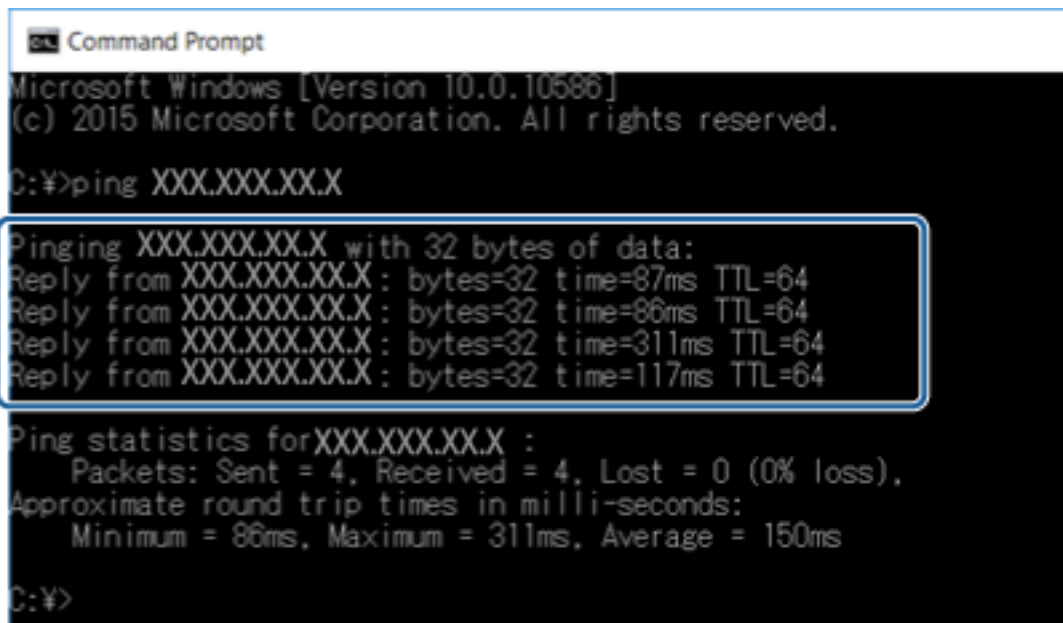

# Checking the Communication between Devices and Computers

### *Checking the Communication Using a Ping Command - Windows*

You can use a Ping command to make sure the computer is connected to the printer. Follow the steps below to check the communication using a Ping command.

1. Check the printer's IP address for the communication that you want to check.

   You can check this from the Network Status screen on the printer's control panel, a connection report, or the **IP Address** column of a network status sheet.

2. Display the computer's command prompt screen.

   Display the application screen, and then select **Command Prompt**.

3. Enter 'ping xxx.xxx.xxx.xxx', and then press the Enter key.

   Enter the printer's IP address for xxx.xxx.xxx.xxx.

4. Check the communication status.

   If the printer and the computer are communicating, the following message is displayed.

**Solving Problems**

If the printer and the computer are not communicating, the following message is displayed.

### Checking the Communication Using a Ping Command - Mac OS

You can use a Ping command to make sure the computer is connected to the printer. Follow the steps below to check the communication using a Ping command.

1.  Check the printer's IP address for the communication that you want to check.

    You can check this from the Network Status screen on the printer's control panel, a connection report, or the **IP Address** column of a network status sheet.

2.  Run Network Utility.

    Enter "Network Utility" in **Spotlight**.

3.  Click the **Ping** tab, enter the IP address that you checked in step 1, and then click **Ping**.
**Solving Problems**

4. Check the communication status.

   If the printer and the computer are communicating, the following message is displayed.

   If the printer and the computer are not communicating, the following message is displayed.

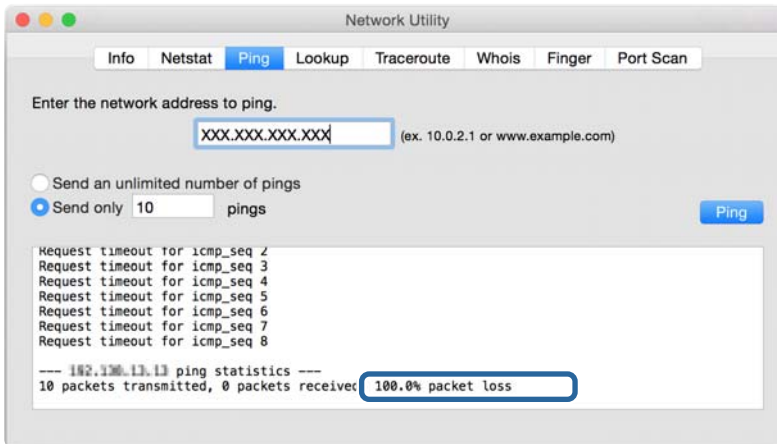

## Checking the Network of the Computer - Windows

By using the command prompt, check the connection status of the computer and the connection path to the printer. This will lead you to solve the problems.

❏ ipconfig command

Display the connection status of the network interface that is currently used by the computer.

By comparing the setting information with actual communication, you can check whether the connection is correct. In case there are multiple DHCP servers on the same network, you can find out the actual address assigned to the computer, the referred DNS server, etc.

❏ Format : ipconfig /all

❏ Examples :

❏ pathping command

You can confirm the list of routers passing through the destination host and the routing of communication.

❏ Format : pathping xxx.xxx.xxx.xxx

❏ Examples : pathping 192.0.2.222

## Performing the Connection Test

From the printer or the computer connected to the same segment as the printer, check whether the connection with the server and folder is correct. This will lead you to solve the problems.

## Mail Server

Check the connection between the printer and the mail server by using the connection test function of the printer.

**Related Information**

➡ "Checking a Mail Server Connection" on page 43

## LDAP Server

Check the connection between the printer and the LDAP server by using the connection test function of the printer.

**Related Information**

➡ "Checking the LDAP Server Connection" on page 71

## FTP Server

Check the connection of the FTP server from the computer in the same segment. Check whether you can access the FTP server registered in the contacts from the Explorer of the computer on the network of the same segment as the printer.

❏ Example of specifying the path :

  ❏ FTP server name : epsonftp

  ❏ Folder name : manual

  ❏ ftp://epsonftp/manual/

  In this case, log in as anonymous. When you have set user name and password, enter them on the dialog displayed when the authentication failed, or include them as below.

  ftp://username:password@epsonftp (When the user name is "ftpusername", the password is "ftppassword".)

❏ An example of the same network segment.

  ❏ Printer's IP address : 192.168.111.12, Subnet mask : 255.255.255.0

  ❏ Confirm from the computer that the IP address is from 192.168.111.2 to 192.168.111.255.

**Related Information**

➡ "Registering a Destination to Contacts using Web Config" on page 63

## Shared Folder

Check the connection of the shared folder from the computer in the same segment. Check whether you can access the shared folder registered in the contacts from the Explorer of the computer on the network of the same segment as the printer.

**Related Information**

➡ "Registering a Destination to Contacts using Web Config" on page 63

## DNS Server

Check the DNS server that is referred by the computer. Confirm the status of the network adapter of the computer on the same network segment as the printer, and confirm whether it is the same as the DNS setting of the printer.

You can check the DNS setting of the computer as follows.

❏ Windows : **Control Panel** > **Network and Internet** > **Network and Sharing Center** > **Change adapter settings**

When there are multiple network interfaces, you can check by entering "ipconfig/all" on the command prompt.

❏ Mac OS : **System Preference** > **Network** > **Advanced...** > **DNS**

**Related Information**

➡

# Initializing the Network Settings

## Disabling Wi-Fi from Web Config

Disable Wi-Fi from Web Config. If you disable Wi-Fi while some devices are connected by Wi-Fi, they are disconnected.

1. Access Web Config and select the **Network** tab > **Wi-Fi**, and then select **Disable Wi-Fi**.

2. Check the message, and then select **OK**.

## Disconnecting Wi-Fi Direct (Simple AP) from Web Config

Disconnect Wi-Fi Direct (simple AP) from Web Config.

1. Access Web Config and select the **Network** tab > **Wi-Fi Direct**.

2. Select **Disable** for **Wi-Fi Direct**.

3. Click **Next**

4. Check the message, and then select **OK**.

## Disabling Wi-Fi from the Control Panel

When Wi-Fi is disabled, the Wi-Fi connection is disconnected.

1. Tap  on the home screen.

2. Tap **Router**.

The network status is displayed.

3. Tap **Start Setup**.

**Solving Problems**

4.  Tap **Wi-Fi Setup**.

5.  Tap **Others** > **Disable Wi-Fi**.

6.  Check the message, and then tap **Start Setup**.

7.  When a completion message is displayed, tap **Close**.

    The screen automatically closes after a specific length of time if you do not tap **Close**.

## Disconnecting Wi-Fi Direct (Simple AP) Connection from the Control Panel

*Note:*
*When Wi-Fi Direct (Simple AP) connection disabled, all computers and smart devices connected to the printer in Wi-Fi Direct (Simple AP) connection are disconnected. If you want to disconnect a specific device, disconnect from the device instead of the printer.*

1.  Tap  on the home screen.

2.  Tap **Wi-Fi Direct**.

    The Wi-Fi Direct information is displayed.

3.  Tap **Start Setup**.

4.  Tap **Disable Wi-Fi Direct**.

5.  Check the message, and then tap **Disable the settings**.

6.  When a completion message is displayed, tap **Close**.

    The screen automatically closes after a specific length of time if you do not tap **Close**.

## Restoring the Network Settings from the Control Panel

You can restore all network settings to their defaults.

1.  Select **Settings** on the home screen.

2.  Select **General Settings** >**System Administration** >**Restore Default Settings** > **Network Settings**.

3.  Check the message, and then select **Yes**.

4.  When a completion message is displayed, close the screen.

    The screen automatically closes after a specific length of time.

# Trouble Case

## Cannot Access Web Config

### The IP address is not assigned to the printer.

A valid IP address may not be assigned to the printer. Configure the IP address using the printer's control panel. You can confirm the current setting information with a network status sheet or from the printer's control panel.

### Web browser does not support the Encryption Strength for SSL/TLS.

SSL/TLS has the Encryption Strength. Web Config can be opened by the web browser that supports the bulk encryptions as follows. Check your browser's encryption support.

❏ 80bit: AES256/AES128/3DES

❏ 112bit: AES256/AES128/3DES

❏ 128bit: AES256/AES128

❏ 192bit: AES256

❏ 256bit: AES256

### CA-signed Certificate is expired.

If there is a problem with the expiration date of the certificate, "The certificate has expired" is displayed when connecting to Web Config with SSL/TLS communication (https). If the message appears before its expiration date, make sure that the printer's date is configured correctly.

### The common name of the certificate and the printer do not match.

If the common name of the certificate and the printer do not match, the message "The name of the security certificate does not match⋯" is displayed when accessing Web Config using SSL/TLS communication (https). This happens because the following IP addresses do not match.

❏ The printer's IP address entered to common name for creating a Self-signed Certificate or CSR

❏ IP address entered to web browser when running Web Config

For Self-signed Certificate, change the printer name. The certificate is updated and the printer can be connected.

For CA-signed Certificate, take the certificate again for the printer.

### The proxy server setting of local address is not set to web browser.

When the printer is set to use a proxy server, configure the web browser not to connect to the local address via the proxy server.

❏ Windows:

Select **Control Panel** > **Network and Internet** > **Internet Options** > **Connections** > **LAN settings** > **Proxy server**, and then configure not to use the proxy server for LAN (local addresses).

**Solving Problems**

❏ Mac OS:

Select **System Preferences** > **Network** > **Advanced** > **Proxies**, and then register the local address for **Bypass proxy settings for these Hosts & Domains**.

Example:

192.168.1.*: Local address 192.168.1.XXX, subnet mask 255.255.255.0

192.168.*.*: Local address 192.168.XXX.XXX, subnet mask 255.255.0.0

**Related Information**

➡ "Accessing Web Config" on page 31

➡ "Assigning the IP Address" on page 21

# Cannot Save Scanned Images to the Shared Folder

## Checking Messages on the Printer

Error messages are displayed on the printer's control panel when an error occurs.

| Messages | Solutions |
|---|---|
| DNS error. Check DNS settings. | ❏ Make sure that the address in the contacts list on the printer and the address of the shared folder are the same.<br><br>❏ If the IP address of the computer is static and is set manually, change the computer name in the network path to the IP address.<br>Example: \\EPSON02\SCAN to \\192.168.xxx.xxx\SCAN<br><br>❏ Make sure that the computer is turned on and does not sleep. If the computer sleeps, you cannot save scanned images to the shared folder.<br><br>❏ Temporarily disable the computer's Firewall and security software. If this clears the error, check the settings in the security software.<br><br>❏ If you are using a laptop computer and the IP address is set as DHCP, the IP address may change when reconnecting to the network. Obtain the IP address again.<br><br>❏ Select **Settings** > **General Settings** > **Network Settings** > **Advanced** > **TCP/IP**, and then check the DNS settings.<br><br>❏ Check the DNS settings for the server, the computer, or the access point.<br><br>❏ The computer name and the IP address may differ when the management table of the DNS server is not updated. Check the computer name and the IP address. |
| Authentication error. Please check the Email Server Settings. | ❏ Make sure the user name and the password are correct on the computer and the contacts on the printer. Also, make sure that the password has not expired.<br><br>❏ Check the **Location** settings. |

| Messages | Solutions |
|---|---|
| Communication error. Check the Wi-Fi/ network connection. | ❏ Make sure that the MS Network is enabled.<br>❏ Make sure that the address in the contacts list on the printer and the address of the shared folder are the same.<br>❏ Access rights for the user in the contacts list should be added on the **Sharing** tab and the **Security** tab of the shared folder's properties. Also, the permissions for the user should be set to "allowed".<br>❏ Check the **Location** settings.<br>❏ Print a network connection report to check if the printer is connected to the network. |
| The file name is already in use. Rename the file and scan again. | ❏ Delete the file with the same name.<br>❏ Change the file name prefix in **File Settings**. |
| Scanned file(s) are too large. Only XX page(s) have been sent. Check if the destination has enough space. | ❏ Increase the storage space in the specified folder.<br>❏ Reduce the number of documents.<br>❏ Lower the scanning resolution or increase the compression ratio to reduce the size of the scanned image. |

### Checking the Point where the Error Occurred

When saving scanned images to the shared folder, saving process proceeds as following. You can then check the point where the error occurred.

| Items | Operation | Error Messages |
|---|---|---|
| Connecting | Connect to the computer from the printer. | DNS error. Check DNS settings. |
| Logging on to the computer | Log on to the computer with the user name and the password. | Authentication error. Please check the Email Server Settings. |
| Checking the folder to save | Check the network path of the shared folder. | Communication error. Check the Wi-Fi/ network connection. |
| Checking the file name | Check if there is a file with the same name as the file you want to save in the folder. | The file name is already in use. Rename the file and scan again. |
| Writing the file | Write a new file. | Scanned file(s) are too large. Only XX page(s) have been sent. Check if the destination has enough space. |

## Saving the Scanned Images Takes a Long Time

Check the following points.

❏ Select **Settings** > **General Settings** > **Network Settings** > **Advanced** > **TCP/IP**, and then check the DNS settings.

❏ Check the DNS settings for the server, the computer, or the access point.

# Appendix

## Introduction of Network Software

The following describes the software that configures and manages devices.

### Epson Device Admin

Epson Device Admin is a multifunctional application software that manages the device on the network.

The following functions are available.

❏ Monitor or manage up to 2,000 printers or scanners over the segment

❏ Make a detailed report, such as for the consumable or product status

❏ Update the firmware of the product

❏ Introduce the device to the network

❏ Apply the unified settings to multiple devices.

You can download Epson Device Admin from Epson support website. For more information, see the documentation or help of Epson Device Admin.

### Running Epson Device Admin (Windows only)

Select **All Programs** > **EPSON** > **Epson Device Admin** > **Epson Device Admin**.

*Note:*
*If the firewall alert appears, allow access for Epson Device Admin.*

### EpsonNet Config

EpsonNet Config is an application software that can make settings to the device on the network. When the devices are connected to the network via Ethernet, you can make settings, such as setting the IP address, changing the connection method and so on even for devices not assigned to the IP address. This also can be used to make network settings to the devices without the control panel.

**Appendix**

For more information, see the documentation or help of EpsonNet Config.

## Running EpsonNet Config - Windows

Select **All Programs** > **EpsonNet** > **EpsonNet Config SE** > **EpsonNet Config**.

*Note:*
*If the firewall alert appears, allow access for EpsonNet Config.*

## Running EpsonNet Config - Mac OS

Select **Go** > **Applications** > **Epson Software** > **EpsonNet** > **EpsonNet Config SE** > **EpsonNet Config**.

# EpsonNet Print (Windows Only)

EpsonNet Print is a software to print on the TCP/IP network. This is installed from the installer together with the printer driver. To perform network printing, create an EpsonNet Print port. There are features and restrictions listed below.

❏ The printer's status is displayed on the spooler screen.

❏ If the printer's IP address is changed by DHCP, the printer is still detected.

❏ You can use a printer located on a different network segment.

❏ You can print using one of the various protocols.

❏ IPv6 address is not supported.

# EpsonNet SetupManager

EpsonNet SetupManager is a software to create a package for a simple printer installation, such as installing the printer driver, installing EPSON Status Monitor and creating a printer port. This software allows the administrator to create unique software packages and distribute them among groups.

For more information, visit your regional Epson website.

# Export and Bulk Registration of Contacts Using Tool

If you use Epson Device Admin, you can back up just the contacts and edit the exported files, then register them all at once.

It is useful if you want to back up only the contacts or when you replace the printer and you want to transfer the contacts from the old one to new one.

## Exporting Contacts

Save the contacts information to the file.

You can edit files saved in SYLK format or csv format by using a spreadsheet application or text editor. You can register all at once after deleting or adding the information.

Information that includes security items such as password and personal information can be saved in binary format with a password. You cannot edit the file. This can be used as the backup file of the information including the security items.

1.  Start Epson Device Admin.

2.  Select **Devices** on the side bar task menu.

3.  Select the device you want to configure from the device list.

4.  Click **Device Configuration** on the **Home** tab on the ribbon menu.

    When the administrator password has been set, enter the password and click **OK**.

5.  Click **Common** > **Contacts**.

6.  Select the export format from **Export** >**Export items**.

    ❏ All Items

    Export the encrypted binary file. Select when you want to include the security items such as password and personal information. You cannot edit the file. If you select it, you have to set the password. Click **Configuration** and set a password between 8 and 63 characters long in ASCII. This password is required when importing the binary file.

    ❏ Items except Security Information

    Export the SYLK format or csv format files. Select when you want to edit the information of the exported file.

7.  Click **Export**.

8.  Specify the place to save the file, select the file type, and then click **Save**.

    The completion message is displayed.

9.  Click **OK**.

    Check that the file is saved to the specified place.

## Importing Contacts

Import the contacts information from the file.

**Appendix**

You can import the files saved in SYLK format or csv format or the backed-up binary file that includes the security items.

1. Start Epson Device Admin.

2. Select **Devices** on the side bar task menu.

3. Select the device you want to configure from the device list.

4. Click **Device Configuration** on the **Home** tab on the ribbon menu.

   When the administrator password has been set, enter the password and click **OK**.

5. Click **Common** > **Contacts**.

6. Click **Browse** on **Import**.

7. Select the file you want to import and then click **Open**.

   When you select the binary file, in **Password** enter the password you set when exporting the file.

8. Click **Import**.

   The confirmation screen is displayed.

9. Click **OK**.

   The validation result is displayed.

   ❏ Edit the information read

      Click when you want to edit the information individually.

   ❏ Read more file

      Click when you want to import multiple files.

10. Click **Import**, and then click **OK** on the import completion screen.

    Return to the device's property screen.

11. Click **Transmit**.

12. Click **OK** on the confirmation message.

    The settings are sent to the printer.

13. On the sending completion screen, click **OK**.

    The printer's information is updated.

    Open the contacts from Web Config or printer's control panel, and then check that the contact is updated.

# Making Wi-Fi Settings from the Control Panel (WPS)

You can connect to Wi-Fi from the printer's control panel using the WPS function.

**Related Information**

➡

**Appendix**

➡

# Making Wi-Fi Settings by Push Button Setup (WPS)

You can automatically set up a Wi-Fi network by pressing a button on the access point. If the following conditions are met, you can set up by using this method.

❑ The access point is compatible with WPS (Wi-Fi Protected Setup).

❑ The current Wi-Fi connection was established by pressing a button on the access point.

*Note:*
*If you cannot find the button or you are setting up using the software, see the documentation provided with the access point.*

1. Tap 📶 | 📶 on the home screen.

2. Tap **Router**.

3. Tap **Start Setup**.

4. Tap **Wi-Fi Setup**.

   If you have made Ethernet settings, check the message and then tap **Yes**.

5. Tap **Push Button Setup(WPS)**.

6. Hold down the [WPS] button on the access point until the security light flashes.

   

   If you do not know where the [WPS] button is, or there are no buttons on the access point, see the documentation provided with your access point for details.

7. Tap **Start Setup**.

8. Tap **Close**.

   The screen automatically closes after a specific length of time if you do not tap **Close**.

   *Note:*
   *If connection fails, restart the access point, move it closer to the printer, and try again. If it still does not work, print a network connection report and check the solution.*

9. Tap **Close** on the network connection settings screen.

**Appendix**

## Making Wi-Fi Settings by PIN Code Setup (WPS)

You can automatically connect to an access point by using a PIN code. You can use this method to set up if an access point is capable of WPS (Wi-Fi Protected Setup). Use a computer to enter a PIN code into the access point.

1. Tap ![icon] | ![icon] on the home screen.

2. Tap **Router**.

3. Tap **Start Setup**.

4. Tap **Wi-Fi Setup**.

   If you have made Ethernet settings, check the message and then tap **Yes**.

5. Tap **Others** > **PIN Code Setup(WPS)**

6. Use your computer to enter the PIN code (an eight digit number) displayed on the printer's control panel into the access point within two minutes.

   *Note:*
   *See the documentation provided with your access point for details on entering a PIN code.*

7. Tap **Start Setup**.

8. Tap **Close**.

   The screen automatically closes after a specific length of time if you do not tap **Close**.

   *Note:*
   *If connection fails, restart the access point, move it closer to the printer, and try again. If it still does not work, print a connection report and check the solution.*

9. Tap **Close** on the network connection settings screen.

# Using Wi-Fi Direct (Simple AP) Connection

Wi-Fi Direct (simple AP) connection connects the printer and devices directly.

Because the printer can be connected directly without going through the connected network, it can be used as temporary connection of the device to the printer that is connected to the network without access authority.

Also printer's NFC function can be used when Wi-Fi Direct (simple AP) is enabled.

## Enabling Wi-Fi Direct (Simple AP) from the Control Panel

1. Select ![icon] | ![icon] on the printer's control panel.

2. Select **Wi-Fi Direct**.

   When the Wi-Fi Direct (simple AP) connection is enabled, Wi-Fi connection information is displayed.

3. Select **Start Setup**.

**Appendix**

4. Select**Start Setup**.

   When Wi-Fi Direct (simple AP) connection is enabled, network (SSID) and password is displayed.

5. Close the screen.

   *Note:*
   *From smart devices, connect to the printer using the network (SSID) and password displayed on the printer's control panel.*

## Changing the Wi-Fi Direct (Simple AP) Settings

When Wi-Fi Direct (simple AP) connection is enabled, you can change the settings from ![icon] | ![icon] > **Wi-Fi Direct** > **Start Setup**, and then the following menu items are displayed.

### Changing password

Change the Wi-Fi Direct (simple AP) password for connecting to the printer to your arbitrary value. You can set the password in ASCII characters that is displayed on the software keyboard on the control panel.

When changing the password, all connected devices are disconnected. Use the new password if you want to re-connect the device.

### Disabling Wi-Fi Direct (simple AP)

Disable Wi-Fi Direct (simple AP) settings of the printer. When disabling it, all devices connected to the printer in Wi-Fi Direct (Simple AP) connection are disconnected.

### Deleting the information of the smart device

Delete the (registered) information of the smart device saved to the printer when connecting by Wi-Fi Direct (simple AP).

If you have an Android device that supports Wi-Fi Direct function, you can connect it to the printer by using that function. The printer keeps the device information if you register the device as a permitted device or a rejected device when connecting by Wi-Fi Direct function. Registered device is permitted or rejected when connecting by Wi-Fi Direct function next time depending on the registered information of the printer.

*Note:*
*To enable/disable Wi-Fi Direct (simple AP) or delete the information of the registered device, you can also set up from Network tab > Wi-Fi Direct on Web Config.*

# Changing the Connection Method

Change the connection method. Make this setting on the network enabling condition.

If the IP address assignment setting is manual, confirm with the network administrator whether the same IP address can be used on the new network.

*Note:*
*When the Wi-Fi connection is enabled, the Ethernet connection is disabled.*

**Related Information**

**Appendix**

➡

# Changing from Ethernet Connection to Wi-Fi Connection

## Changing to Wi-Fi Connection from the Control Panel

Change the Ethernet connection to Wi-Fi connection from the printer's control panel. The changing connection method is basically the same as the Wi-Fi connection settings. See the topic in this guide on Wi-Fi connection settings from the printer's control panel.

### Related Information

➡

## Changing to Wi-Fi Connection by Using Web Config

Change the Ethernet connection to Wi-Fi connection by using Web Config.

1. Access Web Config and select the **Network** tab > **Wi-Fi**.

   When the administrator password has been set, log in as an administrator by entering the user name and password.

2. Click **Setup**.

3. Select the SSID for the access point and enter the password.

   If the SSID you want to connect to is not displayed, select **Enter SSID** and enter the SSID.

4. Click **Next**.

5. Confirm the displayed message and click **OK**.

6. Disconnect the Ethernet cable from the printer.

*Note:*
*You can also change the connection method by using Epson Device Admin. For details, see the manual or help for Epson Device Admin.*

### Related Information

➡
➡

# Changing from Wi-Fi Connection to Ethernet Connection

## Changing the Network Connection to Ethernet from the Control Panel

Follow the steps below to change the network connection to Ethernet from Wi-Fi using the control panel.

**Appendix**

1. Select **Settings** on the home screen.

2. Select **General Settings** > **Network Settings** > **Wired LAN Setup**.

3. Tap **Start Setup**.

4. Check the message, and then close the screen.

   The screen automatically closes after a specific length of time.

5. Connect the printer to a router using an Ethernet cable.

**Related Information**

➡

## Changing to Ethernet Connection Using Web Config

Change the Wi-Fi connection to Ethernet connection by using Web Config.

1. Access Web Config and select the **Network** tab > **Wi-Fi**.

   When the administrator password has been set, log in as an administrator by entering the user name and password.

2. Click **Disable Wi-Fi**.

3. Check the message, and then select **OK**.

4. Connect the printer and hub (LAN switch) by Ethernet cable.

*Note:*
*You can also change the connection method by using Epson Device Admin. For details, see the guide or help for Epson Device Admin.*

# Using Port for the Printer

The printer uses the following port. These ports should be allowed to become available by the network administrator as necessary.

**Appendix**

| Sender (Client) | Use | Destination (Server) | Protocol | Port Number |
|---|---|---|---|---|
| Printer | File sending (When scan to folder is used from the printer) | FTP server | FTP (TCP) | 20 |
| | | | | 21 |
| | | File server | SMB (TCP) | 445 |
| | | | NetBIOS (UDP) | 137 |
| | | | | 138 |
| | | | NetBIOS (TCP) | 139 |
| | Email sending (When scan to mail is used from the printer) | SMTP server | SMTP (TCP) | 25 |
| | | | SMTP SSL/TLS (TCP) | 465 |
| | | | SMTP STARTTLS (TCP) | 587 |
| | POP before SMTP connection (When scan to mail is used from the printer) | POP server | POP3 (TCP) | 110 |
| | When Epson Connect is used | Epson Connect Server | HTTPS | 443 |
| | | | XMPP | 5222 |
| | When printing from Google Cloud Print | Google Cloud Print Server | HTTPS | 443 |
| | | | XMPP | 5222 |
| | Collecting user information (Use the contacts from the printer) | LDAP server | LDAP (TCP) | 389 |
| | | | LDAP SSL/TLS (TCP) | 636 |
| | | | LDAP STARTTLS (TCP) | 389 |
| | User authentication when sending email<br><br>User authentication when collecting user information (When using the contacts from the printer) | KDC server | Kerberos | 88 |
| | Control WSD | Client computer | WSD (TCP) | 5357 |
| | Search the computer when push scanning from Document Capture Pro | Client computer | Network Push Scan Discovery | 2968 |

**Appendix**

| Sender (Client) | Use | Destination (Server) | Protocol | Port Number |
|---|---|---|---|---|
| Client computer | Discover the printer from an application such as EpsonNet Config, printer driver, and scanner driver. | Printer | ENPC (UDP) | 3289 |
| | Collect and set up the MIB information from an application such as EpsonNet Config, printer driver, and scanner driver. | Printer | SNMP (UDP) | 161 |
| | Forwarding LPR data | Printer | LPR (TCP) | 515 |
| | Forwarding RAW data | Printer | RAW (Port9100) (TCP) | 9100 |
| | Searching WSD printer | Printer | WS-Discovery (UDP) | 3702 |
| | Forwarding the scan data from Document Capture Pro | Printer | Network Scan (TCP) | 1865 |
| | Collecting the job information when push scanning from Document Capture Pro | Printer | Network Push Scan | 2968 |

# Menu Options for Settings

Select **Settings** on the home screen of the printer to make various settings.

# Menu Options for General Settings

Select the menus on the control panel as described below.

**Settings** > **General Settings**

# Menu Options for Basic Settings in General Settings

LCD Brightness:

Adjust the brightness of the LCD screen.

Sound:

Adjust the volume and select the type of the sound.

Detect Double Feed:

Select **On** to detect a double-feed paper error when scanning with the ADF.

Sleep Timer:

Adjust the time period to enter a sleep mode (energy saving mode) when the printer has not performed any operations. The LCD screen turns black when the setting time passes.

**Appendix**

Power Off Settings:

Your product may have this feature or the **Power Off Timer** feature depending on the location of purchase.

❏ Power Off If Inactive

Select this setting to turn the printer off automatically if it is not used for a specified period of time. Any increase will affect the product's energy efficiency. Please consider the environment before making any change.

❏ Power Off If Disconnected

Select this setting to turn the printer off after 30 minutes when all ports including the USB port are disconnected. This feature may not be available depending on your region.

Date/Time Settings:

❏ Date/Time

Enter the current date and time.

❏ Daylight Saving Time

Select the summer time setting that applies to your area.

❏ Time Difference

Enter the time difference between your local time and UTC (Coordinated Universal Time).

Country/Region:

Select the country or region in which you are using your printer.

Language:

Select the language used on the LCD screen.

Start-up Screen:

Specify the initial menu displayed on the LCD screen when the printer turns on and **Operation Time Out** is enable.

Edit Home:

Change the layout of the icons on the LCD screen. You can also add, remove, and move icons.

Wall Paper:

Change the background color of the LCD screen.

You can also select a background image from a memory device. Only JPEG format is supported.

Operation Time Out:

Select **On** to return to the initial screen when no operations have been performed for the specified time. When user restrictions have been applied and no operations are performed for the specified time, you are logged out and returned to the initial screen. When printing is paused from the status monitor or cancel button, and no operations have been performed for the specified time, printing resumes automatically. If you select **Off** for this feature, it does not automatically resume after printing has been paused.

Keyboard:

Change the layout of the keyboard on the LCD screen.

**Appendix**

Default Screen(Job/Status)

Select the default information you want to display when you tap **Default Screen(Job/Status)**.

Screen Effect:

Select **On** to enable animation effects when switching screens. If you select **Off**, screen switching is faster.

Administrator Lock Items

These are the items that are locked when **Settings** > **General Settings** > **System Administration** > **Security Settings** > **Admin Settings** > **Lock Setting** is enabled.

| Item | | Panel lock |
|------|--|------------|
| Basic Settings | | - |
| | LCD Brightness | - |
| | Sound | - |
| | Detect Double Feed | ✓*1 |
| | Sleep Timer | ✓ |
| | Power Off Settings | ✓ |
| | Date/Time Settings | ✓ |
| | Country/Region | ✓ |
| | Language | ✓*1 |
| | Start-up Screen | ✓ |
| | Edit Home | ✓ |
| | Wall Paper | ✓ |
| | Operation Time Out | ✓ |
| | Keyboard | - |
| | Default Screen(Job/Status) | ✓ |

✓ = To be locked.

- = Not to be loked.

*1You can enable or disable the lock from **General Settings** > **System Administration** > **Security Settings** > **Restrictions**.

## Menu Options for Printer Settings in General Settings

Paper Source Settings:

Paper Setting:

Select the paper source to specify the paper size and paper type you loaded. When **Paper Size Auto Detect** is enabled, the printer detects the paper size you loaded.

**Appendix**

MP Tray Priority:

Select **On** to give printing priority to paper loaded in the MP Tray.

A4/Letter Auto Switching:

Select **On** to feed paper from the paper source set as A4 size when there is no paper source set as Letter, or feed from the paper source set as Letter size when there is no paper source set as A4.

Auto Select Settings:

Select **On** for settings to automatically print on paper from any sources containing paper that matches your paper settings.

Error Notice:

Select **On** to display an error message when the selected paper size or type does not match the loaded paper.

Paper Setup Auto Display:

Select **On** to display the **Paper Setting** screen when loading paper in the paper source.

User-Defined Paper Size List:

You can change the user defined size setting. This is useful when you print frequently on irregularly sized paper.

Output: Copy:

Select where to output when copying.

Output: Other:

Select where to output when printing anything except for copies.

Printing Language:

Select the printing language for the USB interface or the network interface.

Universal Print Settings:

These print settings are applied when you print by an external device without using the printer driver.

Top Offset:

Adjust the top margin of the paper.

Left Offset:

Adjust the left margin of the paper.

Top Offset in Back:

Adjust the top margin for the back of the page when performing 2-sided printing.

Left Offset in Back:

Adjust the left margin for the back margin of the page when performing 2-sided printing.

**Appendix**

Skip Blank Page:

Skips blank pages in the print data automatically.

Job Separation

Select **On** to output copies separated by jobs.

Rotate Sort

Select **On** to rotate each copy by 90 degrees when printing multiple copies.

Insert Sheets per User

Select **On** to insert a slip sheet between jobs per sender when printing from a computer. Slip sheets are inserted from the specified paper source.

PDL Print Configuration:

Select the PDL Print Configuration options you want to use for PCL or PostScript printing.

Common Settings:

❏ Paper Size

Select the default paper size for PCL or PostScript printing.

❏ Paper Type

Select the default paper type for PCL or PostScript printing.

❏ Orientation

Select the default orientation for PCL or PostScript printing.

❏ Quality

Select the print quality for PCL or PostScript printing.

❏ Ink Save Mode

Select **On** to save ink by reducing the print density.

❏ Print Order

Last Page on Top:

Starts printing from the first page of a file.

First Page on Top:

Starts printing from the last page of a file.

❏ Number of Copies

Set the number of copies to print.

❏ Binding Margin

Select the binding position.

❏ Auto Paper Ejection

Select **On** to eject paper automatically when printing is stopped during a print job.

❏ 2-Sided Printing

Select **On** to perform 2-sided printing.

**Appendix**

PCL Menu:

❏ Font Source

Resident

Select to use a font preinstalled on the printer.

Download

Select to use a font you have downloaded.

❏ Font Number

Select the default font number for the default font source. The available number varies depending on the settings you made.

❏ Pitch

Set the default font pitch if the font is scalable and of fixed-pitch. You can select from 0.44 to 99.99 cpi (characters per inch), in 0.01 increments.

This item may not appear depending on the font source or font number settings.

❏ Height

Set the default font height if the font is scalable and proportional. You can select from 4.00 to 999.75 points, in 0.25 increments.

This item may not appear depending on the font source or font number settings.

❏ Symbol Set

Select the default symbol set. If the font that you selected in the font source and the font number setting is not available in the new symbol set setting, the font source and the font number settings are automatically replaced with the default value, IBM-US.

❏ Form

Set the number of lines for the selected paper size and orientation. This also causes a line spacing (VMI) change, and the new VMI value is stored in the printer. This means that later changes in the page size or orientation settings cause changes in the Form value based on the stored VMI.

❏ CR Function

Select the line feed command when printing with a driver from a specific operating system.

❏ LF Function

Select the line feed command when printing with a driver from a specific operating system.

❏ Paper Source Assign

Set the assignment for the paper source select command. When **4** is selected, the commands are set as compatible with the HP LaserJet 4. When **4K** is selected, the commands are set as compatible with the HP LaserJet 4000, 5000, and 8000. When **5S** is selected, the commands are set as compatible with the HP LaserJet 5S.

PS3 Menu:

❏ Error Sheet

Select **On** to print a sheet showing the status when an error occurs during PostScript or PDF printing.

❏ Binary

Select **On** when printing data that contains binary images. The application may send the binary data even if the printer driver setting is set to ASCII, but you can print the data when this feature is enabled.

**Appendix**

❏ PDF Page Size

Select the paper size when printing a PDF file. If **Auto** is selected, the paper size is determined based on the size of the first page.

Auto Error Solver:

Select an action to perform when a 2-sided printing error or a memory full error occurs.

❏ On

Displays a warning and prints in single-sided mode when a 2-sided printing error occurs, or prints only what the printer could process when a memory full error occurs.

❏ Off

Displays an error message and cancels printing.

Memory Device Interface:

Select **Enable** to allow the printer to access an inserted memory device. If **Disable** is selected, you cannot save data to the memory device with the printer. This prevents confidential documents from being removed illegally.

Thick Paper:

Select **On** to prevent ink from smearing on your printouts, however, this may lower the print speed. If you cannot prevent ink from smearing using this feature, try reducing the print density and copy density.

Quiet Mode:

Select **On** to reduce noise during printing, however, this may lower the print speed. Depending on the paper type and print quality settings you selected, there may be no difference in the printer's noise level.

Optimize Finishing:

Select **On** to reduce paper misalignment and improve the printer's ability to staple and stack paper. Using this feature decreases print speed.

Print Speed Priority

Select **Off** to allow the printer to match the printing speed to the paper type and print data conditions. This allows you to prevent print quality from declining and paper jams.

PC Connection via USB

When you enable it, you can permit access by the computer that is connected via USB.

When you disable it, you can prohibit printing that is not via the network.

USB I/F Timeout Setting:

Specify the length of time in seconds that must elapse before ending USB communication with a computer after the printer receives a print job from a PostScript printer driver or PCL printer driver. If the job ending is not clearly defined from a PostScript printer driver or PCL printer driver, it can cause endless USB communication. When this occurs, the printer ends communication after the specified time has elapsed. Enter 0 (zero) if you do not want to end communication.

**Appendix**

# Menu Options for Network Settings in General Settings

Wi-Fi Setup:

Set up or change wireless network settings. Choose the connection method from the following and then follow the instructions on the LCD panel.

❏ Router

❏ Wi-Fi Direct

Wired LAN Setup:

Set up or change a network connection that uses a LAN cable and router. When this is being used, Wi-Fi connections are disabled.

Network Status:

Displays or prints the current network settings.

Connection Check:

Checks the current network connection and prints a report. If there are any problems with the connection, see the report to solve the problem.

Advanced:

Make the following detailed settings.

❏ Device Name

❏ TCP/IP

❏ Proxy Server

❏ Email Server

❏ IPv6 Address

❏ MS Network Sharing

❏ NFC

❏ Link Speed & Duplex

❏ Redirect HTTP to HTTPS

❏ Disable IPsec/IP Filtering

❏ Disable IEEE802.1X

# Menu Options for Web Service Settings in General Settings

Epson Connect Services:

Displays whether the printer is registered and connected to Epson Connect.

You can register to the service by tapping **Register** and follow the instructions.

When you have registered, you can change the following settings.

❏ Suspend/Resume

❏ Unregister

For details, see the following web site.

**Appendix**

https://www.epsonconnect.com/

http://www.epsonconnect.eu (Europe only)

Google Cloud Print Services:

Displays whether the printer is registered and connected to Google Cloud Print services.

When you have registered, you can change the following settings.

❏ Enable/Disable

❏ Unregister

For details on registering to Google Cloud Print services, see the following web site.

https://www.epsonconnect.com/

http://www.epsonconnect.eu (Europe only)

## Menu Options for System Administration in General Settings

By using this menu, you can maintain the product as a system administrator. It also allows you to restrict product features for individual users to suite your work or office style.

### Contacts Manager:

You can make the following settings for contacts.

Add/Edit/Delete:

Register and/or delete contacts for the Scan to Computer (Email) and Scan to Network Folder/FTP menus.

Frequent:

Register frequently used contacts to access them quickly. You can also change the order of the list.

Print Contacts:

Print your contact list.

View Options:

Change the way the contact list is displayed.

Search Options:

Change the method for searching contacts.

### Print Head Cleaning Settings:

You can make the following settings for print head cleaning.

Auto Cleaning:

Check if the print head nozzles are clogged before printing or after printing.

Print head cleaning is performed automatically if it is necessary as a result of checking.

**Appendix**

Periodic Cleaning:

Select **On** to perform print head cleaning when a certain number of pages are printed.

### *Clear Internal Memory Data:*

This item is displayed on PCL or PostScript compatible printer.

Delete the printer's internal memory data, such as a downloaded font and macro for PCL printing or a job of password printing.

### *HDD Erase Settings:*

Make settings for processing data stored in the internal hard disc.

Jobs for printing, copying, and scanning are temporarily saved to the hard disc in order to handle the data for authenticated printing and the large amount of copying, scanning, printing, etc. Make settings to safely erase this data.

Auto Erase Memory Setting:

When enabled, the target data is erased sequentially when it becomes unnecessary, such as when printing or scanning is completed. The target to be deleted is data written while this function is enabled.

Because access to the hard disc is necessary, the time to enter power saving mode will be delayed.

Erase All Memory:

Erases all data on the hard disc. You cannot perform other operations or turn off the device during formatting.

High Speed: Erases all data with a dedicated erase command.

Overwrite: Erases all data with a dedicated erase command, and overwrites other data in all areas to erase all data.

### *Security Settings:*

You can make the following security settings.

Restrictions:

Permit to change the settings of the following items when panel lock is enabled.

❏ Job log access

❏ Access to Register/Delete Contacts

❏ Access to Print Save History of Scan to Network Folder/FTP

❏ Access to Recent of Scan to Email

❏ Access to Show Sent History of Scan to Email

❏ Access to Print Sent History of Scan to Email

❏ Access to Language

❏ Access to Thick Paper

❏ Access to Quiet Mode

**Appendix**

❏ Access to Print Speed Priority

❏ Access to Detect Double Feed

❏ Protection of Personal Data

❏ Access to Copy Output Tray

❏ Accept Power Off

### Access Control:

Select **On** to restrict product features. This requires users to log into the product control panel with their user name and password before they can use control panel features.

❏ Accept Unknown User Jobs

Select whether or not to allow jobs that do not have the necessary authentication information.

❏ Accept Only Confidential Jobs

Select whether or not to print only confidential jobs.

❏ Restrict Access to Job Status

Select whether or not to allow users to access other users' jobs.

### Admin Settings:

❏ Admin Password

Set, change, and clear an administrator password.

❏ Lock Setting

Select whether or not to lock the control panel using the password registered in **Admin Password**.

### Password Policy:

Select **On** to make settings for the following password rules.

❏ Minimum Password Length

❏ Include Uppercase Alphabet

❏ Include Lowercase Alphabet

❏ Include Number

❏ Include Punctuation Mark

### Audit Log

Select **On** to record an audit log.

### Program Verification on Start Up

Select **On** to verify the printer's program when starting up.

### *Restore Default Settings:*

Reset the settings in the following menus to their defaults.

❏ Network Settings

❏ Copy Settings

❏ Scan Settings

❏ Clear All Data and Settings

**Appendix**

*Firmware Update:*

You can get firmware information such as your current version and information on available updates.

**Notification:**

Select **On** to receive a notification if a firmware update is available.

# Menu Option for Print Counter

Displays the total number of prints from the time you purchased the printer. Tap **Print Sheet** when you want to print the result.

# Menu Option for Supply Status

Displays the approximate level of the ink and service life of the maintenance box.

When the ! mark is displayed, ink is running low or the maintenance box is nearly full. When the X mark is displayed, you need to replace the item as ink is expended or the maintenance box is full.

# Menu Options for Maintenance

To maintain print quality, use the following features to clean the print head.

Print Head Nozzle Check:

Select this feature to check if the print head nozzles are clogged. The printer prints a nozzle check pattern.

Print Head Cleaning:

Select this feature to clean clogged nozzles in the print head.

# Menu Option for Language

Select the language used on the LCD screen.

# Menu Options for Printer Status/Print

Print Status Sheet:

Configuration Status Sheet:

Print information sheets showing the current printer status and settings.

Supply Status Sheet:

Print information sheets showing the status of consumables.

**Appendix**

Usage History Sheet:

Print information sheets showing the usage history of the printer.

PS3 Font List:

Print a list of fonts that are available for a PostScript printer.

PCL Font List:

Print a list of fonts that are available for a PCL print.

Network:

Wired LAN/Wi-Fi Status:

Displays the current network connection status.

Wi-Fi Direct Status:

Displays the current network connection status.

Email Server Status:

Displays the current settings.

Print Status Sheet:

Prints the current network settings.

# Menu Options for Contacts Manager

Add/Edit/Delete:

Register and/or delete contacts for the Scan to Computer (Email) and Scan to Network Folder/FTP menus.

Frequent:

Register frequently used contacts to access them quickly. You can also change the order of the list.

Print Contacts:

Print your contact list.

View Options:

Change the way the contact list is displayed.

Search Options:

Change the method for searching contacts.

# Menu Options for User Settings

Select the menus on the control panel as described below.

**Settings** > **User Settings**

**Appendix**

You cannot change settings that have been locked by your administrator.

You can change the default settings of the following menus.

❏ Scan to Network Folder/FTP

❏ Scan to Computer (Email)

❏ Scan to Memory Device

❏ Scan to Cloud

❏ Copy Settings

# Menu Option for Authentication System

You can check the status of the Authentication System and the Epson Open Platform.

### Authentication Device Status

Displays the status of the Authentication System.

### Epson Open Platform Information

Displays the status of the Epson Open Platform.

# Advanced Security Settings for Enterprise

In this chapter, we describe advanced security features.

# Security Settings and Prevention of Danger

When a printer is connected to a network, you can access it from a remote location. In addition, many people can share the printer, which is helpful in improving operational efficiency and convenience. However, risks such as illegal access, illegal use, and tampering with data are increased. If you use the printer in an environment where you can access the Internet, the risks are even higher.

For printers that do not have access protection from the outside, it will be possible to read the print job logs that are stored in the printer from the Internet.

In order to avoid this risk, Epson printers have a variety of security technologies.

Set the printer as necessary according to the environmental conditions that have been built with the customer's environment information.

| Name | Feature type | What to set | What to prevent |
|---|---|---|---|
| SSL/TLS communications | The communication content is encrypted with SSL/TLS communications when accessing to the Epson server on the Internet from the printer, such as communicating to the computer via web browser, using Epson Connect, and updating firmware. | Obtain a CA-signed certificate, and then import it to the printer. | Clearing an identification of the printer by the CA-signed certification prevents impersonation and unauthorized access. In addition, communication contents of SSL/TLS are protected, and it prevents the leakage of contents for printing data and setup information. |
| Control of protocol | Controls the protocols and services to be used for communication between printers and computers, and it enables and disables features. | A protocol or service that is applied to features allowed or prohibited separately. | Reducing security risks that may occur through unintended use by preventing users from using unnecessary functions. |
| IPsec/IP filtering | You can set to allow severing and cutting off of data that is from a certain client or is a particular type. Since IPsec protects the data by IP packet unit (encryption and authentication), you can safely communicate unsecured protocol. | Create a basic policy and individual policy to set the client or type of data that can access the printer. | Protect unauthorized access, and tampering and interception of communication data to the printer. |
| IEEE802.1X | Allows only a user who is authenticated to Wi-Fi and Ethernet to connect. Allows only a permitted user to use the printer. | Authentication setting to the RADIUS server (authentication sever). | Protect unauthorized access and use to the printer. |

**Related Information**

**Advanced Security Settings for Enterprise**

## Security Feature Settings

When setting IPsec/IP filtering or IEEE802.1X, it is recommended that you access Web Config using SSL/TLS to communicate settings information in order to reduce security risks such as tampering or interception.

Also, you can use Web Config by connecting the printer directly to the computer using an Ethernet cable, and then entering the IP address into a web browser. The printer can be connected in a secure environment after the security settings have been completed.

# SSL/TLS Communication with the Printer

When the server certificate is set using SSL/TLS (Secure Sockets Layer/Transport Layer Security) communication to the printer, you can encrypt the communication path between computers. Do this if you want to prevent remote and unauthorized access.

## About Digital Certification

❏ CA-signed Certificate

This is a certificate signed by the CA (Certificate Authority.) You can obtain it to apply to the Certificate Authority. This certificate certifies the existence of the printer is and used for SSL/TLS communication so that you can ensure the safety of data communication.

When it is used for SSL/TLS communication, it is used as a server certificate.

When it is set to IPsec/IP Filtering or IEEE802.1x communication, it is used as a client certificate.

❏ CA Certificate

This is a certificate that is in chain of the CA-signed Certificate, also called the intermediate CA certificate. It is used by the web browser to validate the path of the printer's certificate when accessing the server of the other party or Web Config.

For the CA Certificate, set when to validate the path of server certificate accessing from the printer. For the printer, set to certify the path of the CA-signed Certificate for SSL/TLS connection.

You can obtain the CA certificate of the printer from the Certification Authority where the CA certificate is issued.

Also, you can obtain the CA certificate used to validate the server of the other party from the Certification Authority that issued the CA-signed Certificate of the other server.

❏ Self-signed Certificate

This is a certificate that the printer signs and issues itself. It is also called the root certificate. Because the issuer certifies itself, it is not reliable and cannot prevent impersonation.

Use it when making the security setting and performing simple SSL/TLS communication without the CA-signed Certificate.

If you use this certificate for an SSL/TLS communication, a security alert may be displayed on a web browser because the certificate is not registered on a web browser. You can use the Self-signed Certificate only for an SSL/TLS communication.

**Related Information**

# Obtaining and Importing a CA-signed Certificate

## Obtaining a CA-signed Certificate

To obtain a CA-signed certificate, create a CSR (Certificate Signing Request) and apply it to certificate authority. You can create a CSR using Web Config and a computer.

Follow the steps to create a CSR and obtain a CA-signed certificate using Web Config. When creating a CSR using Web Config, a certificate is the PEM/DER format.

1. Access Web Config, and then select the **Network Security** tab. Next, select **SSL/TLS** > **Certificate** or **IPsec/IP Filtering** > **Client Certificate** or **IEEE802.1X** > **Client Certificate**.

   Whatever you choose, you can obtain the same certificate and use it in common.

2. Click **Generate** of **CSR**.

   A CSR creating page is opened.

3. Enter a value for each item.

   *Note:*
   *Available key length and abbreviations vary by a certificate authority. Create a request according to rules of each certificate authority.*

4. Click **OK**.

   A completion message is displayed.

5. Select the **Network Security** tab. Next, select **SSL/TLS** > **Certificate**, or **IPsec/IP Filtering** > **Client Certificate** or **IEEE802.1X** > **Client Certificate**.

6. Click one of the download buttons of **CSR** according to a specified format by each certificate authority to download a CSR to a computer.

   > **Important:**
   > *Do not generate a CSR again. If you do so, you may not be able to import an issued CA-signed Certificate.*

7. Send the CSR to a certificate authority and obtain a CA-signed Certificate.

   Follow the rules of each certificate authority on sending method and form.

8. Save the issued CA-signed Certificate to a computer connected to the printer.

   Obtaining a CA-signed Certificate is complete when you save a certificate to a destination.

**Advanced Security Settings for Enterprise**

## CSR Setting Items

| Items | Settings and Explanation |
|---|---|
| Key Length | Select a key length for a CSR. |
| Common Name | You can enter between 1 and 128 characters. If this is an IP address, it should be a static IP address. You can enter 1 to 5 IPv4 addresses, IPv6 addresses, host names, FQDNs by separating them with commas.<br><br>The first element is stored to the common name, and other elements are stored to the alias field of the certificate subject.<br><br>Example:<br><br>Printer's IP address : 192.0.2.123, Printer name : EPSONA1B2C3<br><br>Common Name : EPSONA1B2C3,EPSONA1B2C3.local,192.0.2.123 |
| Organization/ Organizational Unit/ Locality/ State/Province | You can enter between 0 and 64 characters (Organizational Unit cannot exceed 55 characters) in ASCII (0x20-0x7E). You can divide distinguished names with commas. |
| Country | Enter a country code in two-digit number specified by ISO-3166. |

## Importing a CA-signed Certificate

Import the obtained CA-signed Certificate to the printer.

> ❗ *Important:*
> ❏ *Make sure that the printer's date and time is set correctly. Certificate may be invalid.*
> ❏ *If you obtain a certificate using a CSR created from Web Config, you can import a certificate one time.*

1. Access Web Config and then select the **Network Security** tab. Next, select **SSL/TLS** > **Certificate**, or **IPsec/IP Filtering** > **Client Certificate** or **IEEE802.1X** > **Client Certificate**.

2. Click **Import**

   A certificate importing page is opened.

3. Enter a value for each item. Set **CA Certificate 1** and **CA Certificate 2** when verifying the path of the certificate on the web browser that accesses the printer.

   Depending on where you create a CSR and the file format of the certificate, required settings may vary. Enter values to required items according to the following.

   ❏ A certificate of the PEM/DER format obtained from Web Config

      ❏ **Private Key**: Do not configure because the printer contains a private key.

      ❏ **Password**: Do not configure.

      ❏ **CA Certificate 1/CA Certificate 2**: Optional

   ❏ A certificate of the PEM/DER format obtained from a computer

      ❏ **Private Key**: You need to set.

      ❏ **Password**: Do not configure.

      ❏ **CA Certificate 1/CA Certificate 2**: Optional

   ❏ A certificate of the PKCS#12 format obtained from a computer

      ❏ **Private Key**: Do not configure.

      ❏ **Password**: Optional

      ❏ **CA Certificate 1/CA Certificate 2**: Do not configure.

4. Click **OK**.

   A completion message is displayed.

*Note:*
Click **Confirm** to verify the certificate information.

**Related Information**

## CA-signed Certificate Importing Setting Items

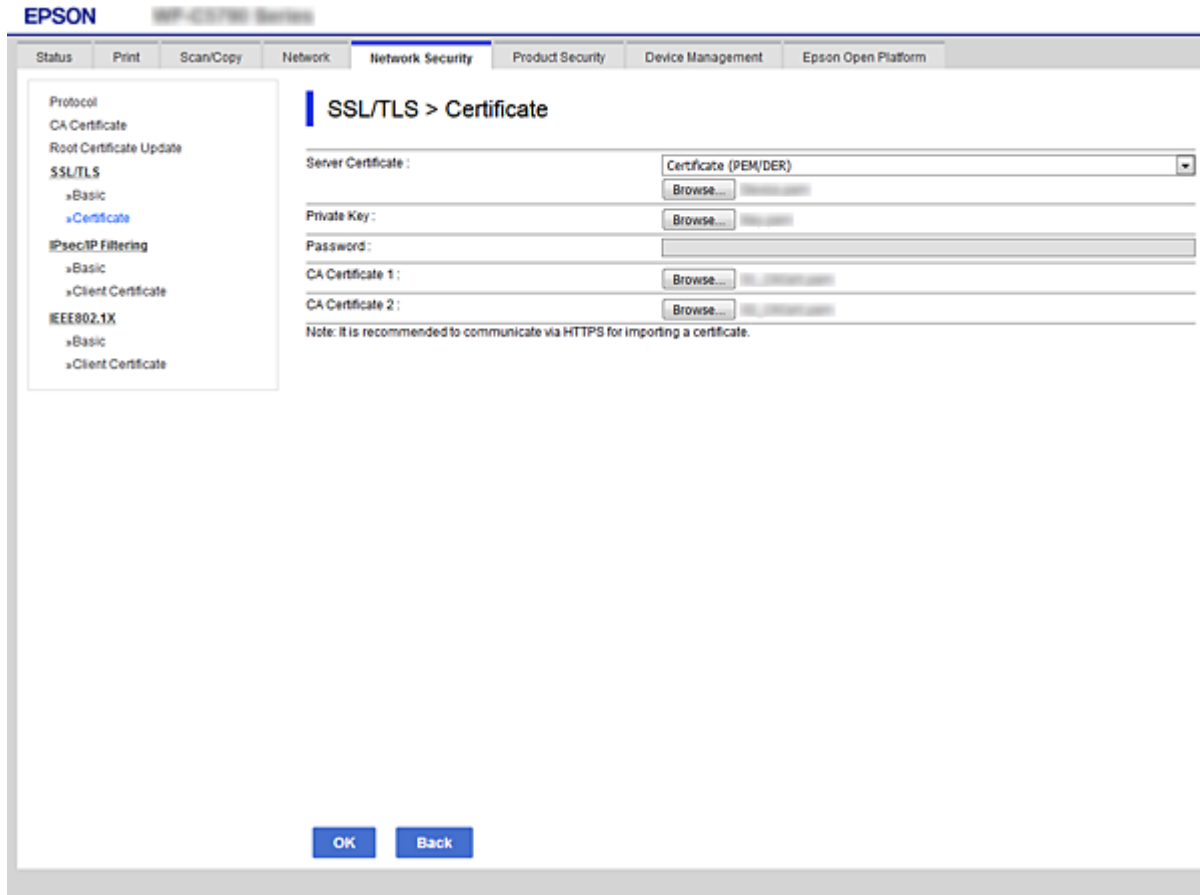

| Items | Settings and Explanation |
|---|---|
| Server Certificate or Client Certificate | Select a certificate's format.<br><br>For SSL/TLS connection, the Server Certificate is displayed.<br><br>For IPsec/IP Filtering or IEEE802.1x, the Client Certificate is displayed. |
| Private Key | If you obtain a certificate of the PEM/DER format by using a CSR created from a computer, specify a private key file that is match a certificate. |
| Password | If the file format is **Certificate with Private Key (PKCS#12)**, enter the password for encrypting the private key that is set when you obtain the certificate. |
| CA Certificate 1 | If your certificate's format is **Certificate (PEM/DER)**, import a certificate of a certificate authority that issues a CA-signed Certificate used as server certificate. Specify a file if you need. |
| CA Certificate 2 | If your certificate's format is **Certificate (PEM/DER)**, import a certificate of a certificate authority that issues CA Certificate 1. Specify a file if you need. |

**Related Information**

➡

# Deleting a CA-signed Certificate

You can delete an imported certificate when the certificate has expired or when an encrypted connection is no longer necessary.

> ❗ *Important:*
>
> *If you obtain a certificate using a CSR created from Web Config, you cannot import a deleted certificate again. In this case, create a CSR and obtain a certificate again.*

1. Access Web Config, and then select the **Network Security** tab. Next, select **SSL/TLS** > **Certificate** or **IPsec/IP Filtering** > **Client Certificate** or **IEEE802.1X** > **Client Certificate**.

2. Click **Delete**.

3. Confirm that you want to delete the certificate in the message displayed.

# Configure CA Certificate

When you set the CA Certificate, you can validate the path to the CA certificate of the server that the printer accesses. This can prevent impersonation.

You can obtain the CA Certificate from the Certification Authority where the CA-signed Certificate is issued.

**Related Information**

➡ "Accessing Web Config" on page 31
➡ "CSR Setting Items" on page 149
➡ "Importing a CA-signed Certificate" on page 150

# Importing a CA Certificate

Import the CA Certificate to the printer.

1. Access Web Config and then select the **Network Security** tab > **CA Certificate**.

2. Click **Import**.

3. Specify the CA Certificate you want to import.

4. Click **OK**.

When importing is complete, you are returned to the **CA Certificate** screen, and the imported CA Certificate is displayed.

## Deleting a CA Certificate

You can delete the imported CA Certificate.

1. Access Web Config and then select the **Network Security** tab > **CA Certificate**.

2. Click **Delete** next to the CA Certificate that you want to delete.

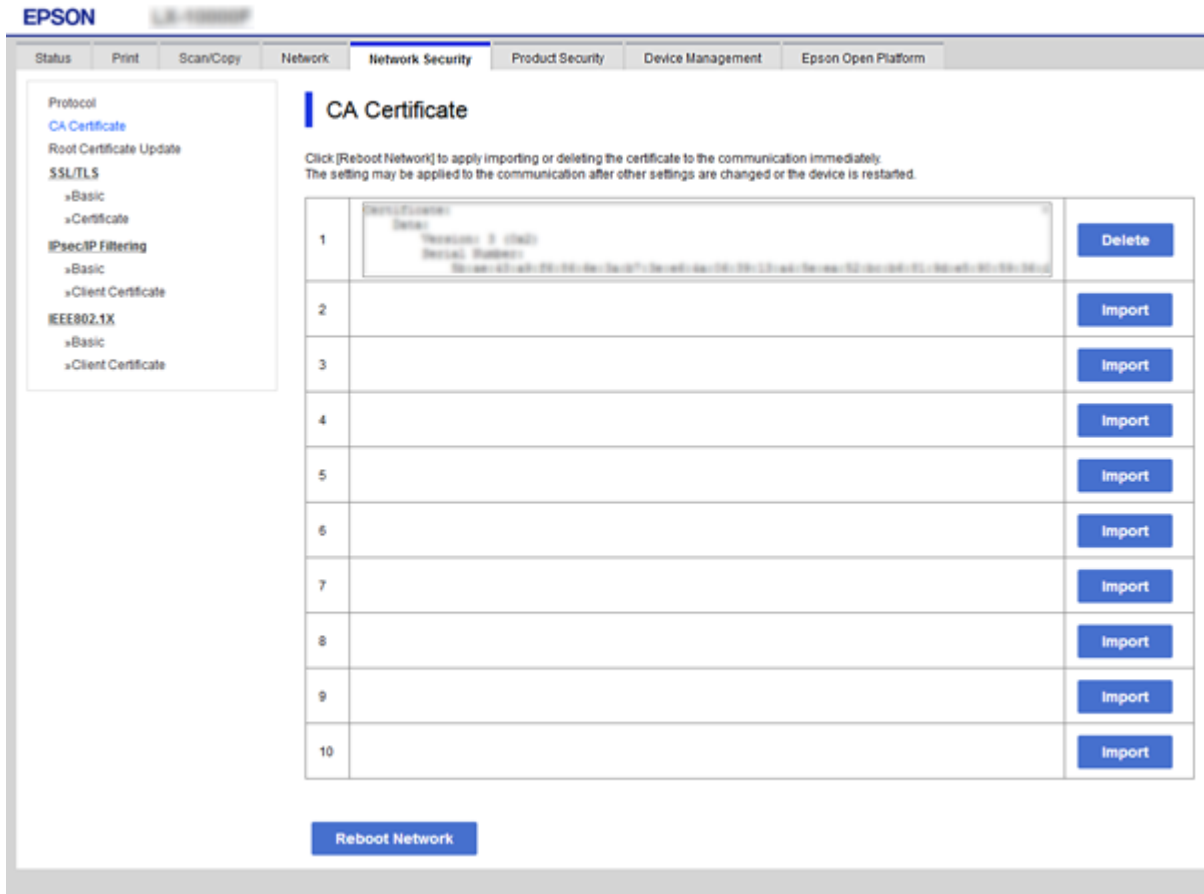

3. Confirm that you want to delete the certificate in the message displayed.

4. Click **Reboot Network**, and then check that the deleted CA Certificate is not listed on the updated screen.

**Related Information**

➡ "Accessing Web Config" on page 31

## Updating a Self-signed Certificate

Because the Self-signed Certificate is issued by the printer, you can update it when it has expired or when the content described changes.

1. Access Web Config and select the **Network Security** tab > **SSL/TLS** > **Certificate**.

2. Click **Update**.

3. Enter **Common Name**.

   You can enter up to 5 IPv4 addresses, IPv6 addresses, host names, FQDNs between 1 to 128 characters and separating them with commas. The first parameter is stored to the common name, and the others are stored to the alias field for the subject of the certificate.

   Example:

**Advanced Security Settings for Enterprise**

Printer's IP address : 192.0.2.123, Printer name : EPSONA1B2C3

Common name : EPSONA1B2C3,EPSONA1B2C3.local,192.0.2.123

4. Specify a validity period for the certificate.

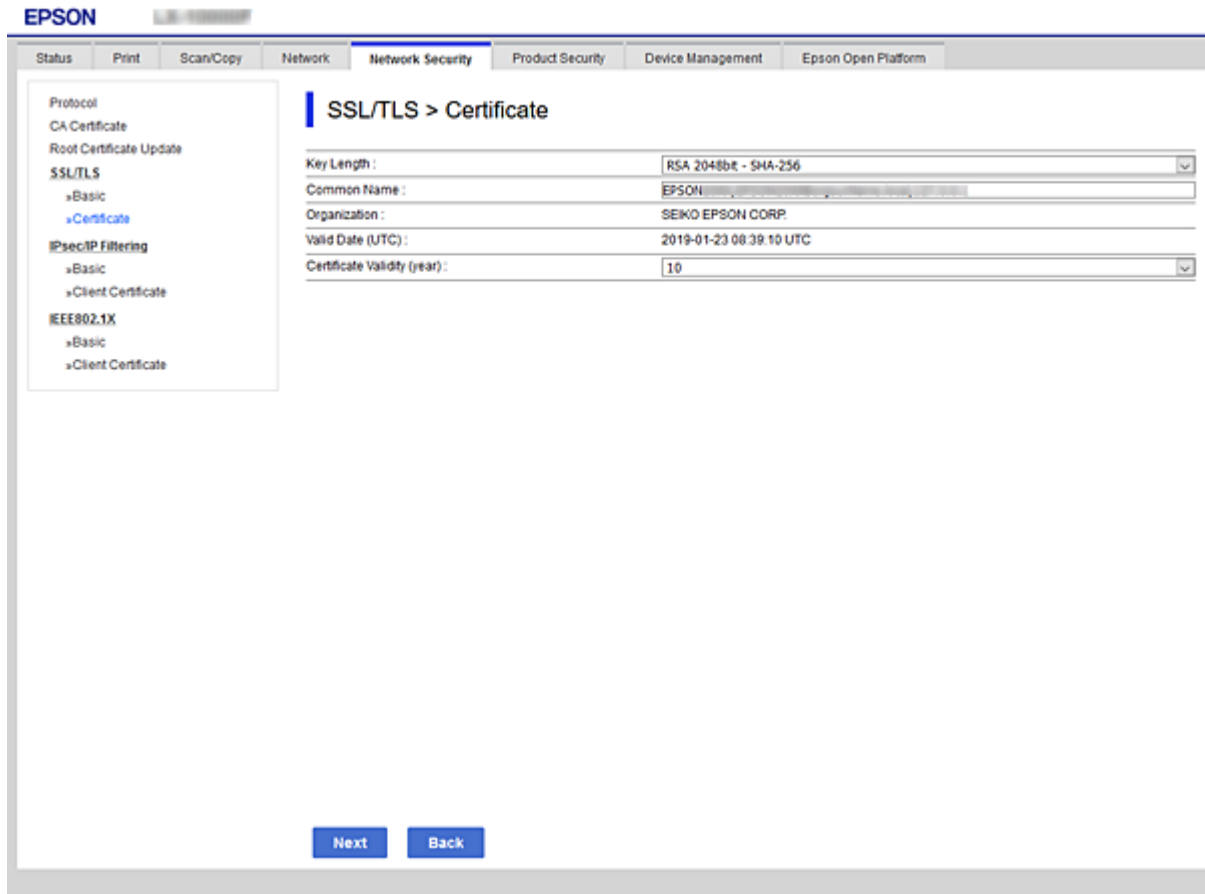

5. Click **Next**.

A confirmation message is displayed.

6. Click **OK**.

The printer is updated.

*Note:*
*You can check the certificate information from **Network Security Settings** tab > **SSL/TLS** > **Certificate** > **Self-signed Certificate** and click **Confirm**.*

**Related Information**

➡

# Controlling Using Protocols

You can print using a variety of pathways and protocols.

**Advanced Security Settings for Enterprise**

If you are using a multi-function printer, you can use network scanning from an unspecified number of network computers.

You can lower unintended security risks by restricting printing from specific pathways or by controlling the available functions.

# Controlling protocols

Configure the protocol settings.

1. Access Web Config and then select the **Network Security** tab > **Protocol**.

2. Configure each item.

3. Click **Next**.

4. Click **OK**.

   The settings are applied to the printer.

# Protocols you can Enable or Disable

| Protocol | Description |
| --- | --- |
| Bonjour Settings | You can specify whether to use Bonjour. Bonjour is used to search for devices, print, and so on. |
| SLP Settings | You can enable or disable the SLP function. SLP is used for push scanning and network searching in EpsonNet Config. |
| WSD Settings | You can enable or disable the WSD function. When this is enabled, you can add WSD devices, and print from the WSD port. |
| LLTD Settings | You can enable or disable the LLTD function. When this is enabled, it is displayed on the Windows network map. |
| LLMNR Settings | You can enable or disable the LLMNR function. When this is enabled, you can use name resolution without NetBIOS even if you cannot use DNS. |
| LPR Settings | You can specify whether or not to allow LPR printing. When this is enabled, you can print from the LPR port. |
| RAW(Port9100) Settings | You can specify whether or not to allow printing from the RAW port (Port 9100). When this is enabled, you can print from the RAW port (Port 9100). |
| IPP Settings | You can specify whether or not to allow printing from IPP. When this is enabled, you can print over the Internet. |
| FTP Settings | You can specify whether or not to allow FTP printing. When this is enabled, you can print over an FTP server. |
| SNMPv1/v2c Settings | You can specify whether or not to enable SNMPv1/v2c. This is used to set up devices, monitoring, and so on. |
| SNMPv3 Settings | You can specify whether or not to enable SNMPv3. This is used to set up encrypted devices, monitoring, etc. |

**Advanced Security Settings for Enterprise**

# Protocol Setting Items

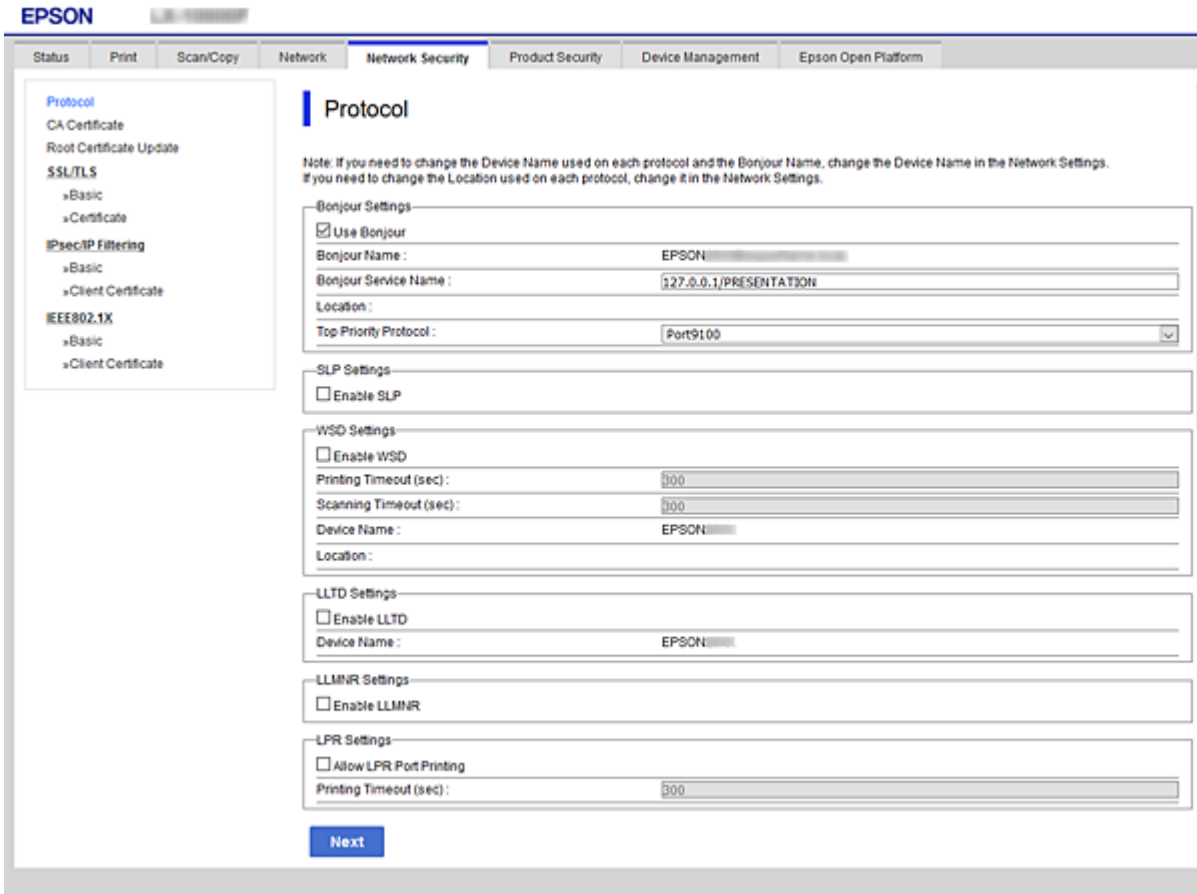

Bonjour Settings

| Items | Setting value and Description |
|---|---|
| Use Bonjour | Select this to search for or use devices through Bonjour. |
| Bonjour Name | Displays the Bonjour name. |
| Bonjour Service Name | Displays the Bonjour service name. |
| Location | Displays the Bonjour location name. |
| Top Priority Protocol | Select the top priority protocol for Bonjour print. |
| Wide-Area Bonjour | Set whether to use Wide-Area Bonjour. |

SLP Settings

| Items | Setting value and Description |
|---|---|
| Enable SLP | Select this to enable the SLP function.<br><br>This is used such as network searching in EpsonNet Config. |

WSD Settings

**Advanced Security Settings for Enterprise**

| Items | Setting value and Description |
|---|---|
| Enable WSD | Select this to enable adding devices using WSD, and print and scan from the WSD port. |
| Printing Timeout (sec) | Enter the communication timeout value for WSD printing between 3 to 3,600 seconds. |
| Scanning Timeout (sec) | Enter the communication timeout value for WSD scanning between 3 to 3,600 seconds. |
| Device Name | Displays the WSD device name. |
| Location | Displays the WSD location name. |

LLTD Settings

| Items | Setting value and Description |
|---|---|
| Enable LLTD | Select this to enable LLTD. The printer is displayed in the Windows network map. |
| Device Name | Displays the LLTD device name. |

LLMNR Settings

| Items | Setting value and Description |
|---|---|
| Enable LLMNR | Select this to enable LLMNR. You can use name resolution without NetBIOS even if you cannot use DNS. |

LPR Settings

| Items | Setting value and Description |
|---|---|
| Allow LPR Port Printing | Select to allow printing from the LPR port. |
| Printing Timeout (sec) | Enter the timeout value for LPR printing between 0 to 3,600 seconds. If you do not want to timeout, enter 0. |

RAW(Port9100) Settings

| Items | Setting value and Description |
|---|---|
| Allow RAW(Port9100) Printing | Select to allow printing from the RAW port (Port 9100). |
| Printing Timeout (sec) | Enter the timeout value for RAW (Port 9100) printing between 0 to 3,600 seconds. If you do not want to timeout, enter 0. |

IPP Settings

| Items | Setting value and Description |
|---|---|
| Enable IPP | Select to enable IPP communication. Only printers that support IPP are displayed. |

**Advanced Security Settings for Enterprise**

| Items | Setting value and Description |
|---|---|
| Allow Non-secure Communication | Select to allow the printer to communicate without any security measures (IPP). |
| Communication Timeout (sec) | Enter the timeout value for IPP printing between 0 to 3,600 seconds. |
| URL(Network) | Displays IPP URLs (http and https) when the printer is connected by wired LAN or Wi-Fi. The URL is a combined value of the printer's IP address, Port number, and IPP printer name. |
| URL(Wi-Fi Direct) | Displays IPP URLs (http and https) when the printer is connected by Wi-Fi Direct. The URL is a combined value of the printer's IP address, Port number, and IPP printer name. |
| Printer Name | Displays the IPP printer name. |
| Location | Displays the IPP location. |

FTP Settings

| Items | Setting value and Description |
|---|---|
| Enable FTP Server | Select to enable FTP printing. Only printers that support FTP printing are displayed. |
| Communication Timeout (sec) | Enter the timeout value for FTP communication between 0 to 3,600 seconds. If you do not want to timeout, enter 0. |

SNMPv1/v2c Settings

| Items | Setting value and Description |
|---|---|
| Enable SNMPv1/v2c | Select to enable SNMPv1/v2c. |
| Access Authority | Set the access authority when SNMPv1/v2c is enabled. Select **Read Only** or **Read/Write**. |
| Community Name (Read Only) | Enter 0 to 32 ASCII (0x20 to 0x7E) characters. |
| Community Name (Read/Write) | Enter 0 to 32 ASCII (0x20 to 0x7E) characters. |

SNMPv3 Settings

| Items | Setting value and Description |
|---|---|
| Enable SNMPv3 | SNMPv3 is enabled when the box is checked. |
| User Name | Enter between 1 and 32 characters using 1 byte characters. |
| Authentication Settings | |

**Advanced Security Settings for Enterprise**

| Items | | Setting value and Description |
|---|---|---|
| | Algorithm | Select an algorithm for an authentication for SNMPv3. |
| | Password | Enter the password for an authentication for SNMPv3. Enter between 8 and 32 characters in ASCII (0x20-0x7E). If you do not specify this, leave it blank. |
| | Confirm Password | Enter the password you configured for confirmation. |
| Encryption Settings | | |
| | Algorithm | Select an algorithm for an encryption for SNMPv3. |
| | Password | Enter the password for an encryption for SNMPv3. Enter between 8 and 32 characters in ASCII (0x20-0x7E). If you do not specify this, leave it blank. |
| | Confirm Password | Enter the password you configured for confirmation. |
| Context Name | | Enter within 32 characters or less in Unicode (UTF-8). If you do not specify this, leave it blank. The number of characters that can be entered varies depending on the language. |

# Encrypted Communication Using IPsec/IP Filtering

## About IPsec/IP Filtering

You can filter traffic based on IP addresses, services, and port by using IPsec/IP Filtering function. By combining of the filtering, you can configure the printer to accept or block specified clients and specified data. Additionally, you can improve security level by using an IPsec.

*Note:*
*Computers that run Windows Vista or later or Windows Server 2008 or later support IPsec.*

## Configuring Default Policy

To filter traffic, configure the default policy. The default policy applies to every user or group connecting to the printer. For more fine-grained control over users and groups of users, configure group policies.

1. Access Web Config and then select the **Network Security** tab > **IPsec/IP Filtering** > **Basic**.

2. Enter a value for each item.

3. Click **Next**.

   A confirmation message is displayed.

4. Click **OK**.

   The printer is updated.

**Advanced Security Settings for Enterprise**

**Related Information**

➡

# Default Policy Setting Items

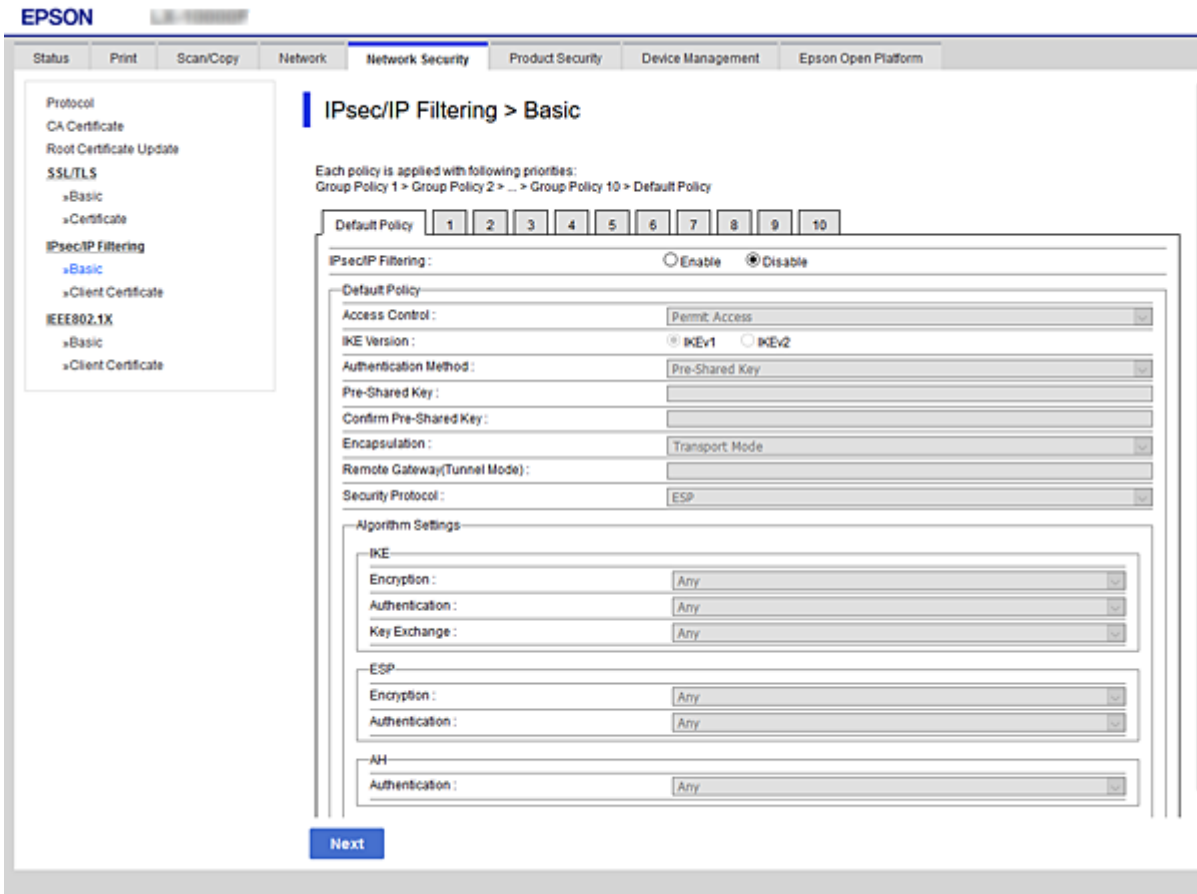

**Default Policy**

| Items | Settings and Explanation |
|---|---|
| IPsec/IP Filtering | You can enable or disable an IPsec/IP Filtering feature. |

❏ **Access Control**

Configure a control method for traffic of IP packets.

| Items | Settings and Explanation |
|---|---|
| Permit Access | Select this to permit configured IP packets to pass through. |
| Refuse Access | Select this to refuse configured IP packets to pass through. |
| IPsec | Select this to permit configured IPsec packets to pass through. |

**Advanced Security Settings for Enterprise**

❏ **IKE Version**

Select **IKEv1** or **IKEv2** for **IKE Version**. Select one of them according to the device that the printer is connected to.

❏ IKEv1

The following items are displayed when you select **IKEv1** for **IKE Version**.

| Items | Settings and Explanation |
|---|---|
| Authentication Method | To select **Certificate**, you need to obtain and import a CA-signed certificate in advance. |
| Pre-Shared Key | If you select **Pre-Shared Key** for **Authentication Method**, enter a pre-shared key between 1 and 127 characters. |
| Confirm Pre-Shared Key | Enter the key you configured for confirmation. |

❏ IKEv2

| Items | | Settings and Explanation |
|---|---|---|
| Local | Authentication Method | To select **Certificate**, you need to obtain and import a CA-signed certificate in advance. |
| | ID Type | If you select **Pre-Shared Key** for **Authentication Method**, select the type of ID for the printer. |
| | ID | Enter the printer's ID that matches the type of ID. You cannot use "@", "#", and "=" for the first character. **Distinguished Name** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. You need to include "=". **IP Address** : Enter IPv4 or IPv6 format. **FQDN** : Enter a combination of between 1 and 255 characters using A-Z, a-z, 0-9, "-", and period (.). **Email Address** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. You need to include "@". **Key ID** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. |
| | Pre-Shared Key | If you select **Pre-Shared Key** for **Authentication Method**, enter a pre-shared key between 1 and 127 characters. |
| | Confirm Pre-Shared Key | Enter the key you configured for confirmation. |

**Advanced Security Settings for Enterprise**

| Items | | Settings and Explanation |
|---|---|---|
| Remote | Authentication Method | To select **Certificate**, you need to obtain and import a CA-signed certificate in advance. |
| | ID Type | If you select **Pre-Shared Key** for **Authentication Method**, select the type of ID for the device that you want to authenticate. |
| | ID | Enter the printer's ID that matches to the type of ID. You cannot use "@", "#", and "=" for the first character. **Distinguished Name** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. You need to include "=". **IP Address** : Enter IPv4 or IPv6 format. **FQDN** : Enter a combination of between 1 and 255 characters using A-Z, a-z, 0-9, "-", and period (.). **Email Address** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. You need to include "@". **Key ID** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. |
| | Pre-Shared Key | If you select **Pre-Shared Key** for **Authentication Method**, enter a pre-shared key between 1 and 127 characters. |
| | Confirm Pre-Shared Key | Enter the key you configured for confirmation. |

❏ **Encapsulation**

If you select **IPsec** for **Access Control**, you need to configure an encapsulation mode.

| Items | Settings and Explanation |
|---|---|
| Transport Mode | If you only use the printer on the same LAN, select this. IP packets of layer 4 or later are encrypted. |
| Tunnel Mode | If you use the printer on the Internet-capable network such as IPsec-VPN, select this option. The header and data of the IP packets are encrypted. **Remote Gateway(Tunnel Mode)**: If you select **Tunnel Mode** for **Encapsulation**, enter a gateway address between 1 and 39 characters. |

❏ **Security Protocol**

If you select **IPsec** for **Access Control**, select an option.

| Items | Settings and Explanation |
|---|---|
| ESP | Select this to ensure the integrity of an authentication and data, and encrypt data. |
| AH | Select this to ensure the integrity of an authentication and data. Even if encrypting data is prohibited, you can use IPsec. |

**Advanced Security Settings for Enterprise**

❏ **Algorithm Settings**

It is recommended that you select **Any** for all settings or select an item other than **Any** for each setting. If you select **Any** for some of the settings and select an item other than **Any** for the other settings, the device may not communicate depending on the other device that you want to authenticate.

| Items | | Settings and Explanation |
|---|---|---|
| IKE | Encryption | Select the encryption algorithm for IKE. <br><br> The items vary depending on the version of IKE. |
| | Authentication | Select the authentication algorithm for IKE. |
| | Key Exchange | Select the key exchange algorithm for IKE. <br><br> The items vary depending on the version of IKE. |
| ESP | Encryption | Select the encryption algorithm for ESP. <br><br> This is available when **ESP** is selected for **Security Protocol**. |
| | Authentication | Select the authentication algorithm for ESP. <br><br> This is available when **ESP** is selected for **Security Protocol**. |
| AH | Authentication | Select the encryption algorithm for AH. <br><br> This is available when **AH** is selected for **Security Protocol**. |

➡ "Configuring Default Policy" on page 160

# Configuring Group Policy

A group policy is one or more rules applied to a user or user group. The printer controls IP packets that match with configured policies. IP packets are authenticated in the order of a group policy 1 to 10 then a default policy.

1. Access Web Config and then select the **Network Security** tab > **IPsec/IP Filtering** > **Basic**.

2. Click a numbered tab you want to configure.

3. Enter a value for each item.

4. Click **Next**.

   A confirmation message is displayed.

5. Click **OK**.

   The printer is updated.

**Related Information**

➡ "Accessing Web Config" on page 31
➡ "Group Policy Setting Items" on page 165

**Advanced Security Settings for Enterprise**

# Group Policy Setting Items

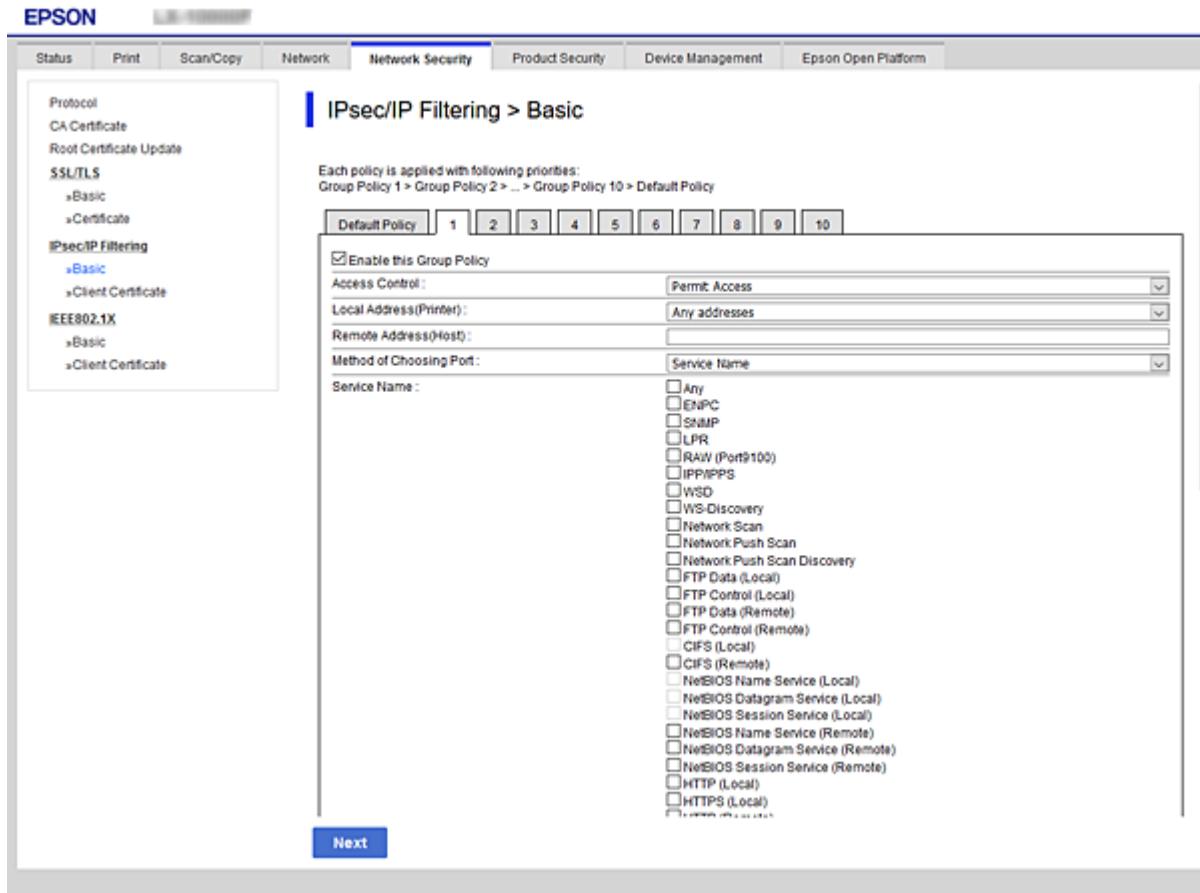

| Items | Settings and Explanation |
|---|---|
| Enable this Group Policy | You can enable or disable a group policy. |

**Access Control**

Configure a control method for traffic of IP packets.

| Items | Settings and Explanation |
|---|---|
| Permit Access | Select this to permit configured IP packets to pass through. |
| Refuse Access | Select this to refuse configured IP packets to pass through. |
| IPsec | Select this to permit configured IPsec packets to pass through. |

**Local Address(Printer)**

Select an IPv4 address or IPv6 address that matches your network environment. If an IP address is assigned automatically, you can select **Use auto-obtained IPv4 address**.

*Note:*
*If an IPv6 address is assigned automatically, the connection may be unavailable. Configure a static IPv6 address.*

**Remote Address(Host)**

**Advanced Security Settings for Enterprise**

Enter a device's IP address to control access. The IP address must be 43 characters or less. If you do not enter an IP address, all addresses are controlled.

*Note:*
*If an IP address is assigned automatically (e.g. assigned by DHCP), the connection may be unavailable. Configure a static IP address.*

**Method of Choosing Port**

Select a method to specify ports.

❏ Service Name

   If you select **Service Name** for **Method of Choosing Port**, select an option.

❏ Transport Protocol

   If you select **Port Number** for **Method of Choosing Port**, you need to configure an encapsulation mode.

| Items | Settings and Explanation |
|---|---|
| Any Protocol | Select this to control all protocol types. |
| TCP | Select this to control data for unicast. |
| UDP | Select this to control data for broadcast and multicast. |
| ICMPv4 | Select this to control ping command. |

❏ Local Port

   If you select **Port Number** for **Method of Choosing Port** and if you select **TCP** or **UDP** for **Transport Protocol**, enter port numbers to control receiving packets, separating them with commas. You can enter 10 port numbers at the maximum.

   Example: 20,80,119,5220

   If you do not enter a port number, all ports are controlled.

❏ Remote Port

   If you select **Port Number** for **Method of Choosing Port** and if you select **TCP** or **UDP** for **Transport Protocol**, enter port numbers to control sending packets, separating them with commas. You can enter 10 port numbers at the maximum.

   Example: 25,80,143,5220

   If you do not enter a port number, all ports are controlled.

**IKE Version**

Select **IKEv1** or **IKEv2** for **IKE Version**. Select one of them according to the device that the printer is connected to.

❏ IKEv1

   The following items are displayed when you select **IKEv1** for **IKE Version**.

| Items | Settings and Explanation |
|---|---|
| Authentication Method | If you select **IPsec** for **Access Control**, select an option. Used certificate is common with a default policy. |
| Pre-Shared Key | If you select **Pre-Shared Key** for **Authentication Method**, enter a pre-shared key between 1 and 127 characters. |
| Confirm Pre-Shared Key | Enter the key you configured for confirmation. |

**Advanced Security Settings for Enterprise**

❑ IKEv2

| Items | | Settings and Explanation |
|---|---|---|
| Local | Authentication Method | If you select **IPsec** for **Access Control**, select an option. Used certificate is common with a default policy. |
| | ID Type | If you select **Pre-Shared Key** for **Authentication Method**, select the type of ID for the printer. |
| | ID | Enter the printer's ID that matches the type of ID. You cannot use "@", "#", and "=" for the first character. **Distinguished Name** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. You need to include "=". **IP Address** : Enter IPv4 or IPv6 format. **FQDN** : Enter a combination of between 1 and 255 characters using A-Z, a-z, 0-9, "-", and period (.). **Email Address** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. You need to include "@". **Key ID** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. |
| | Pre-Shared Key | If you select **Pre-Shared Key** for **Authentication Method**, enter a pre-shared key between 1 and 127 characters. |
| | Confirm Pre-Shared Key | Enter the key you configured for confirmation. |
| Remote | Authentication Method | If you select **IPsec** for **Access Control**, select an option. Used certificate is common with a default policy. |
| | ID Type | If you select **Pre-Shared Key** for **Authentication Method**, select the type of ID for the device that you want to authenticate. |
| | ID | Enter the printer's ID that matches to the type of ID. You cannot use "@", "#", and "=" for the first character. **Distinguished Name** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. You need to include "=". **IP Address** : Enter IPv4 or IPv6 format. **FQDN** : Enter a combination of between 1 and 255 characters using A-Z, a-z, 0-9, "-", and period (.). **Email Address** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. You need to include "@". **Key ID** : Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. |
| | Pre-Shared Key | If you select **Pre-Shared Key** for **Authentication Method**, enter a pre-shared key between 1 and 127 characters. |
| | Confirm Pre-Shared Key | Enter the key you configured for confirmation. |

**Encapsulation**

If you select **IPsec** for **Access Control**, you need to configure an encapsulation mode.

**Advanced Security Settings for Enterprise**

| Items | Settings and Explanation |
|---|---|
| Transport Mode | If you only use the printer on the same LAN, select this. IP packets of layer 4 or later are encrypted. |
| Tunnel Mode | If you use the printer on the Internet-capable network such as IPsec-VPN, select this option. The header and data of the IP packets are encrypted.<br><br>**Remote Gateway(Tunnel Mode)**: If you select **Tunnel Mode** for **Encapsulation**, enter a gateway address between 1 and 39 characters. |

**Security Protocol**

If you select **IPsec** for **Access Control**, select an option.

| Items | Settings and Explanation |
|---|---|
| ESP | Select this to ensure the integrity of an authentication and data, and encrypt data. |
| AH | Select this to ensure the integrity of an authentication and data. Even if encrypting data is prohibited, you can use IPsec. |

**Algorithm Settings**

It is recommended that you select **Any** for all settings or select an item other than **Any** for each setting. If you select **Any** for some of the settings and select an item other than **Any** for the other settings, the device may not communicate depending on the other device that you want to authenticate.

| Items | | Settings and Explanation |
|---|---|---|
| IKE | Encryption | Select the encryption algorithm for IKE.<br><br>The items vary depending on the version of IKE. |
| | Authentication | Select the authentication algorithm for IKE. |
| | Key Exchange | Select the key exchange algorithm for IKE.<br><br>The items vary depending on the version of IKE. |
| ESP | Encryption | Select the encryption algorithm for ESP.<br><br>This is available when **ESP** is selected for **Security Protocol**. |
| | Authentication | Select the authentication algorithm for ESP.<br><br>This is available when **ESP** is selected for **Security Protocol**. |
| AH | Authentication | Select the encryption algorithm for AH.<br><br>This is available when **AH** is selected for **Security Protocol**. |

# Combination of Local Address(Printer) and Remote Address(Host) on Group Policy

| | | Setting of Local Address(Printer) | | |
|---|---|---|---|---|
| | | IPv4 | IPv6[*2] | Any addresses[*3] |
| Setting of Remote Address(Host) | IPv4[*1] | ✓ | – | ✓ |
| | IPv6[*1][*2] | – | ✓ | ✓ |
| | Blank | ✓ | ✓ | ✓ |

*1If **IPsec** is selected for **Access Control**, you cannot specify in a prefix length.

*2If **IPsec** is selected for **Access Control**, you can select a link-local address (fe80::) but group policy will be disabled.

*3Except IPv6 link local addresses.

# References of Service Name on Group Policy

*Note:*
*Unavailable services are displayed but cannot be selected.*

| Service Name | Protocol type | Local port number | Remote port number | Features controlled |
|---|---|---|---|---|
| Any | – | – | – | All services |
| ENPC | UDP | 3289 | Any port | Searching for a printer from applications such as Epson Device Admin, a printer driver and the a scanner driver |
| SNMP | UDP | 161 | Any port | Acquiring and configuring of MIB from applications such as Epson Device Admin, the Epson printer driver and the Epson scanner driver |
| LPR | TCP | 515 | Any port | Forwarding LPR data |
| RAW (Port9100) | TCP | 9100 | Any port | Forwarding RAW data |
| WSD | TCP | Any port | 5357 | Controlling WSD |
| WS-Discovery | UDP | 3702 | Any port | Searching for a printer from WSD |
| Network Scan | TCP | 1865 | Any port | Forwarding scan data from Document Capture Pro |
| Network Push Scan | TCP | Any port | 2968 | Acquiring job information of push scanning from Document Capture Pro |
| Network Push Scan Discovery | UDP | 2968 | Any port | Searching for a computer when push scanning from Document Capture Pro is executed |
| FTP Data (Local) | TCP | 20 | Any port | FTP server (forwarding data of FTP printing) |

**Advanced Security Settings for Enterprise**

| Service Name | Protocol type | Local port number | Remote port number | Features controlled |
|---|---|---|---|---|
| FTP Control (Local) | TCP | 21 | Any port | FTP server (controlling FTP printing) |
| FTP Data (Remote) | TCP | Any port | 20 | FTP client (forwarding scan data) However this can control only an FTP server that uses remote port number 20. |
| FTP Control (Remote) | TCP | Any port | 21 | FTP client (controlling to forward scan data) |
| CIFS (Local) | TCP | 445 | Any port | CIFS server (Sharing a network folder) |
| CIFS (Remote) | TCP | Any port | 445 | CIFS client (forwarding scan data to a folder) |
| NetBIOS Name Service (Local) | UDP | 137 | Any port | CIFS server (Sharing a network folder) |
| NetBIOS Datagram Service (Local) | UDP | 138 | Any port | |
| NetBIOS Session Service (Local) | TCP | 139 | Any port | |
| NetBIOS Name Service (Remote) | UDP | Any port | 137 | CIFS client (forwarding scan data to a folder) |
| NetBIOS Datagram Service (Remote) | UDP | Any port | 138 | |
| NetBIOS Session Service (Remote) | TCP | Any port | 139 | |
| HTTP (Local) | TCP | 80 | Any port | HTTP(S) server (forwarding data of Web Config and WSD) |
| HTTPS (Local) | TCP | 443 | Any port | |
| HTTP (Remote) | TCP | Any port | 80 | HTTP(S) client (communicating between Epson Connect or Google Cloud Print, firmware updating and root certificate updating) |
| HTTPS (Remote) | TCP | Any port | 443 | |

# Configuration Examples of IPsec/IP Filtering

**Receiving IPsec packets only**

This example is to configure a default policy only.

**Default Policy**:

❏ **IPsec/IP Filtering: Enable**

❏ **Access Control: IPsec**

❏ **Authentication Method: Pre-Shared Key**

**Advanced Security Settings for Enterprise**

❏ **Pre-Shared Key**: Enter up to 127 characters.

**Group Policy**: Do not configure.

### Receiving printing data and printer settings

This example allows communications of printing data and printer configuration from specified services.

**Default Policy**:

❏ **IPsec/IP Filtering: Enable**

❏ **Access Control**: **Refuse Access**

**Group Policy**:

❏ **Enable this Group Policy**: Check the box.

❏ **Access Control**: **Permit Access**

❏ **Remote Address(Host)**: IP address of a client

❏ **Method of Choosing Port: Service Name**

❏ **Service Name**: Check the box of **ENPC, SNMP, HTTP (Local)**, **HTTPS (Local)** and **RAW (Port9100)**.

### Receiving access from a specified IP address only

This example allows a specified IP address to access the printer.

**Default Policy**:

❏ **IPsec/IP Filtering: Enable**

❏ **Access Control:Refuse Access**

**Group Policy**:

❏ **Enable this Group Policy**: Check the box.

❏ **Access Control**: **Permit Access**

❏ **Remote Address(Host)**: IP address of an administrator's client

*Note:*
*Regardless of policy configuration, the client will be able to access and configure the printer.*

# Configuring a Certificate for IPsec/IP Filtering

Configure the Client Certificate for IPsec/IP Filtering. When you set it, you can use the certificate as an authentication method for IPsec/IP Filtering. If you want to configure the certification authority, go to **CA Certificate**.

1. Access Web Config and then select the **Network Security** tab > **IPsec/IP Filtering** > **Client Certificate**.

2. Import the certificate in **Client Certificate**.

   If you have already imported a certificate published by a Certification Authority in IEEE802.1X or SSL/TLS, you can copy the certificate and use it in IPsec/IP Filtering. To copy, select the certificate from **Copy From**, and then click **Copy**.

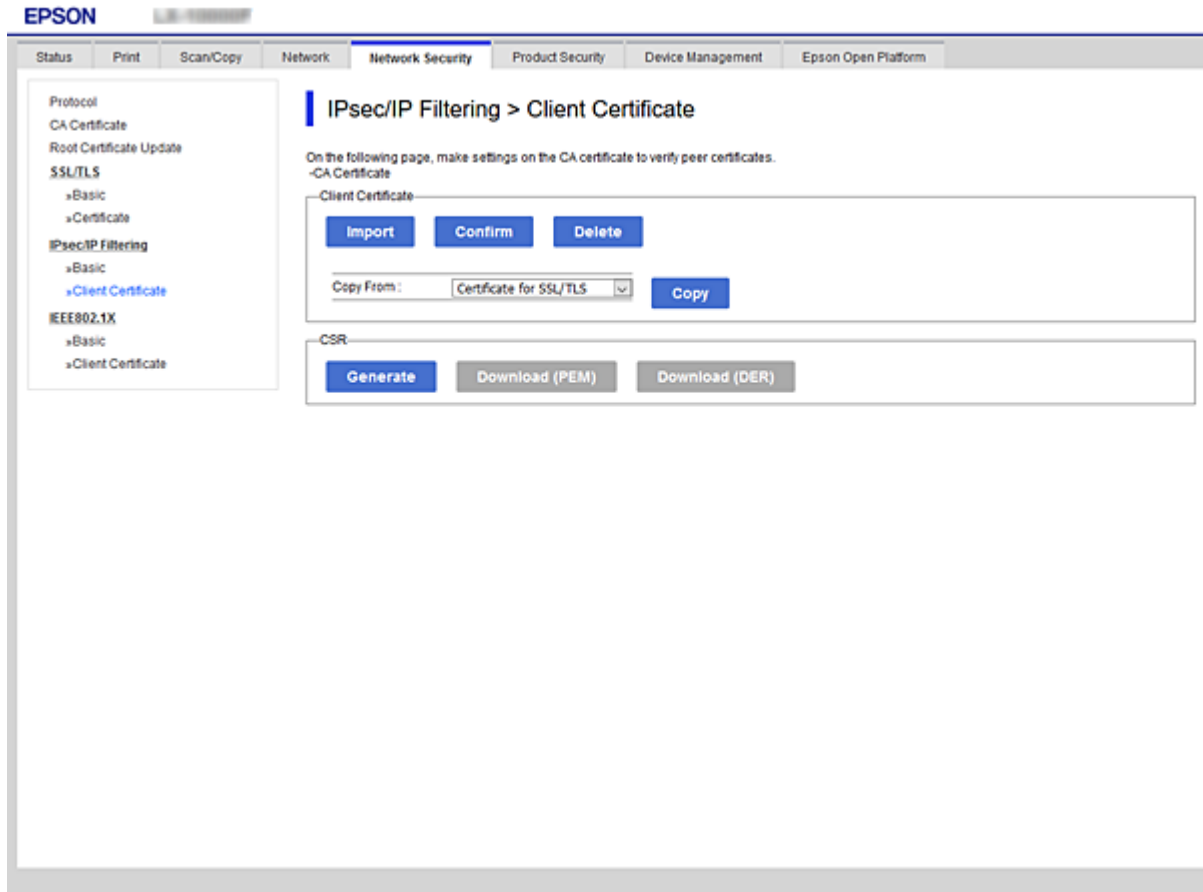

**Related Information**

# Connecting the Printer to an IEEE802.1X Network

## Configuring an IEEE802.1X Network

When you set IEEE802.1X to the printer, you can use it on the network connected to a RADIUS server, a LAN switch with authentication function, or an access point.

1. Access Web Config and then select the **Network Security** tab > **IEEE802.1X** > **Basic**.

2. Enter a value for each item.

   If you want to use the printer on a Wi-Fi network, click **Wi-Fi Setup** and select or enter an SSID.

**Advanced Security Settings for Enterprise**

*Note:*
*You can share settings between Ethernet and Wi-Fi.*

3. Click **Next**.

   A confirmation message is displayed.

4. Click **OK**.

   The printer is updated.

**Related Information**

## IEEE802.1X Network Setting Items

| Items | Settings and Explanation |
|---|---|
| IEEE802.1X (Wired LAN) | You can enable or disable settings of the page (**IEEE802.1X** > **Basic**) for IEEE802.1X (Wired LAN). |
| IEEE802.1X (Wi-Fi) | The connection status of IEEE802.1X (Wi-Fi) is displayed. |

**Advanced Security Settings for Enterprise**

| Items | Settings and Explanation | |
| --- | --- | --- |
| Connection Method | The connection method of a current network is displayed. | |
| EAP Type | Select an option for an authentication method between the printer and a RADIUS server. | |
| | EAP-TLS | You need to obtain and import a CA-signed certificate. |
| | PEAP-TLS | |
| | PEAP/MSCHAPv2 | You need to configure a password. |
| User ID | Configure an ID to use for an authentication of a RADIUS server. Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. | |
| Password | Configure a password to authenticate the printer. Enter 1 to 128 1-byte ASCII (0x20 to 0x7E) characters. If you are using a Windows server as a RADIUS server, you can enter up to 127 characters. | |
| Confirm Password | Enter the password you configured for confirmation. | |
| Server ID | You can configure a server ID to authenticate with a specified RADIUS server. Authenticator verifies whether a server ID is contained in the subject/subjectAltName field of a server certificate that is sent from a RADIUS server or not. Enter 0 to 128 1-byte ASCII (0x20 to 0x7E) characters. | |
| Certificate Validation | You can set certificate validation regardless of the authentication method. Import the certificate in **CA Certificate**. | |
| Anonymous Name | If you select **PEAP-TLS** or **PEAP/MSCHAPv2** for **Authentication Method**, you can configure an anonymous name instead of a user ID for a phase 1 of a PEAP authentication. Enter 0 to 128 1-byte ASCII (0x20 to 0x7E) characters. | |
| Encryption Strength | You can select one of the followings. | |
| | High | AES256/3DES |
| | Middle | AES256/3DES/AES128/RC4 |

**Related Information**

➡

# Configuring a Certificate for IEEE802.1X

Configure the Client Certificate for IEEE802.1X. When you set it, you can use **EAP-TLS** and **PEAP-TLS** as an authentication method of IEEE802.1x. If you want to configure the certification authority certificate, go to **CA Certificate**.

1. Access Web Config and then select the **Network Security** tab > **IEEE802.1X** > **Client Certificate**.

**Advanced Security Settings for Enterprise**

2. Enter a certificate in the **Client Certificate**.

   You can copy the certificate if it is published by a Certification Authority. To copy, select the certificate from **Copy From**, and then click **Copy**.

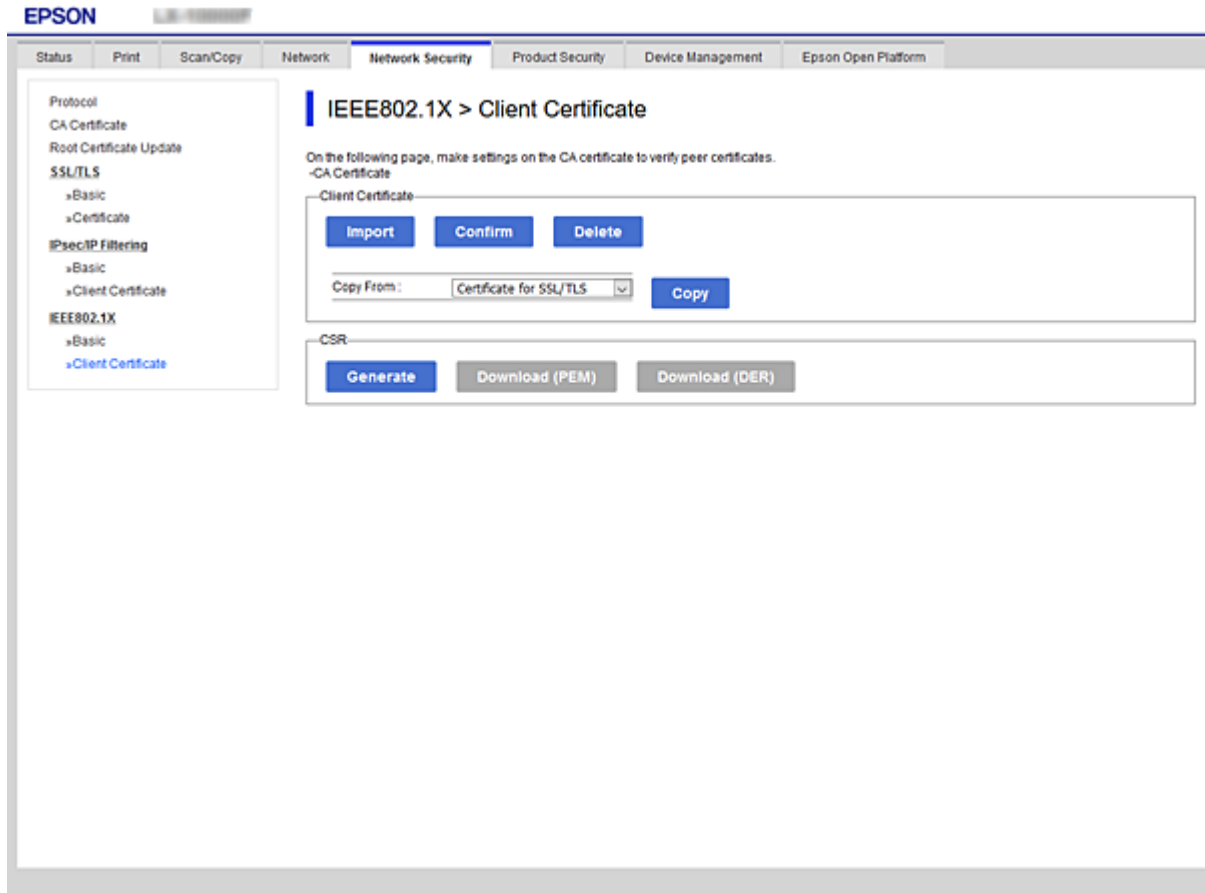

**Related Information**

➡

➡

# Checking IEEE802.1X Network Status

You can check the IEEE802.1X status by printing a network status sheet. For more information on printing a network status sheet, see the printer's documentation.

| Status ID | IEEE802.1X Status |
|---|---|
| Disable | IEEE802.1X feature is disable. |
| EAP Success | IEEE802.1X authentication has succeeded and network connection is available. |
| Authenticating | IEEE802.1X authentication has not been completed. |
| Config Error | Authentication has failed since the user ID has not been set. |
| Client Certificate Error | Authentication has failed since the client certificate is out of date. |

**Advanced Security Settings for Enterprise**

| Status ID | IEEE802.1X Status |
|---|---|
| Timeout Error | Authentication has failed since there is no answer from the RADIUS server and/or authenticator. |
| User ID Error | Authentication has failed since the printer's user ID and/or certificate protocol is incorrect. |
| Server ID Error | Authentication has failed since the server ID of the server certificate and the server's ID do not match. |
| Server Certificate Error | Authentication has failed since there are the following errors in the server certificate.<br><br>❑ The server certificate is out of date.<br><br>❑ The chain of the server certificate is incorrect. |
| CA Certificate Error | Authentication has failed since there are the following errors in a CA certificate.<br><br>❑ Specified CA certificate is incorrect.<br><br>❑ The correct CA certificate is not imported.<br><br>❑ CA certificate is out of date. |
| EAP Failure | Authentication has failed since there are the following errors in the printer settings.<br><br>❑ If **EAP Type** is **EAP-TLS** or **PEAP-TLS**, client certificate is incorrect or has certain problems.<br><br>❑ If **EAP Type** is **PEAP/MSCHAPv2**, user ID or password is not correct. |

# Solving Problems for Advanced Security

## Restoring the Security Settings

When you establish a highly secure environment such as IPsec/IP Filtering or IEEE802.1X, you may not be able to communicate with devices because of incorrect settings or trouble with the device or server. In this case, restore the security settings in order to make settings for the device again or to allow you temporary use.

## Disabling the Security Function Using the Control Panel

You can disable IPsec/IP Filtering or IEEE802.1X using the printer's control panel.

1. Select **Settings** > **General Settings** > **Network Settings**.

2. Select **Advanced**.

3. Select from the following items that you want to disable.

   ❑ **Disable IPsec/IP Filtering**

   ❑ **Disable IEEE802.1X**

4. Select **Proceed** on the confirmation screen.

**Advanced Security Settings for Enterprise**

5. When a completion message is displayed, select **Close**.

   The screen automatically closes after a specific length of time if you do not select **Close**.

# Problems Using Network Security Features

## Forgot a Pre–shared Key

### Re-configure a pre-shared key.

To change the key, access Web Config and select the **Network Security** tab > **IPsec/IP Filtering** > **Basic** > **Default Policy** or **Group Policy**.

When you change the pre-shared key, configure the pre-shared key for computers.

### Related Information

➡

## Cannot Communicate with IPsec Communication

### Specify the algorithm that the printer or the computer does not support.

The printer supports the following algorithms. Check the settings of the computer.

| Security Methods | Algorithms |
| --- | --- |
| IKE encryption algorithm | AES-CBC-128, AES-CBC-192, AES-CBC-256, AES-GCM-128*, AES-GCM-192*, AES-GCM-256*, 3DES |
| IKE authentication algorithm | SHA-1, SHA-256, SHA-384, SHA-512, MD5 |
| IKE key exchange algorithm | DH Group1, DH Group2, DH Group5, DH Group14, DH Group15, DH Group16, DH Group17, DH Group18, DH Group19, DH Group20, DH Group21, DH Group22, DH Group23, DH Group24, DH Group25, DH Group26, DH Group27*, DH Group28*, DH Group29*, DH Group30* |
| ESP encryption algorithm | AES-CBC-128, AES-CBC-192, AES-CBC-256, AES-GCM-128, AES-GCM-192, AES-GCM-256, 3DES |
| ESP authentication algorithm | SHA-1, SHA-256, SHA-384, SHA-512, MD5 |
| AH authentication algorithm | SHA-1, SHA-256, SHA-384, SHA-512, MD5 |

*available for IKEv2 only

### Related Information

➡

# Cannot Communicate Suddenly

### The IP address of the printer has been changed or cannot be used.

When the IP address registered to the local address on Group Policy has been changed or cannot be used, IPsec communication cannot be performed. Disable IPsec using the printer's control panel.

If the DHCP is out of date, rebooting or the IPv6 address is out of date or has not been obtained, then the IP address registered for the printer's Web Config (**Network Security** tab > **IPsec/IP Filtering** > **Basic** > **Group Policy** > **Local Address(Printer)**) may not be found.

Use a static IP address.

### The IP address of the computer has been changed or cannot be used.

When the IP address registered to the remote address on Group Policy has been changed or cannot be used, IPsec communication cannot be performed.

Disable IPsec using the printer's control panel.

If the DHCP is out of date, rebooting or the IPv6 address is out of date or has not been obtained, then the IP address registered for the printer's Web Config (**Network Security** tab > **IPsec/IP Filtering** > **Basic** > **Group Policy** > **Remote Address(Host)**) may not be found.

Use a static IP address.

### Related Information

➡
➡

# Cannot Create the Secure IPP Printing Port

### The correct certificate is not specified as the server certificate for SSL/TLS communication.

If the specified certificate is not correct, creating a port may fail. Make sure you are using the correct certificate.

### The CA certificate is not imported to the computer accessing the printer.

If a CA certificate is not imported to the computer, creating a port may fail. Make sure a CA certificate is imported.

### Related Information

➡

# Cannot Connect After Configuring IPsec/IP Filtering

### The settings of IPsec/IP Filtering are incorrect.

Disable IPsec/IP filtering from the printer's control panel. Connect the printer and computer and make the IPsec/IP Filtering settings again.

### Related Information

➡

## Cannot Access the Printer or Scanner after Configuring IEEE802.1X

### The settings of IEEE802.1X are incorrect.

Disable IEEE802.1X and Wi-Fi from the printer's control panel. Connect the printer and a computer, and then configure IEEE802.1X again.

# Problems on Using a Digital Certificate

## Cannot Import a CA-signed Certificate

### CA-signed Certificate and the information on the CSR do not match.

If the CA-signed Certificate and CSR do not have the same information, the CSR cannot be imported. Check the following:

❑ Are you trying to import the certificate to a device that does not have the same information?

Check the information of the CSR and then import the certificate to a device that has the same information.

❑ Did you overwrite the CSR saved into the printer after sending the CSR to a certificate authority?

Obtain the CA-signed certificate again with the CSR.

### CA-signed Certificate is more than 5KB.

You cannot import a CA-signed Certificate that is more than 5KB.

### The password for importing the certificate is incorrect.

Enter the correct password. If you forget the password, you cannot import the certificate. Re-obtain the CA-signed Certificate.

### Related Information

➡ "Importing a CA-signed Certificate" on page 150

## Cannot Update a Self-Signed Certificate

### The Common Name has not been entered.

**Common Name** must be entered.

### Unsupported characters have been entered to Common Name.

Enter between 1 and 128 characters of either IPv4, IPv6, host name, or FQDN format in ASCII (0x20-0x7E).

**Advanced Security Settings for Enterprise**

**A comma or space is included in the common name.**

If a comma is entered, the **Common Name** is divided at that point. If only a space is entered before or after a comma, an error occurs.

**Related Information**

➡ "Updating a Self-signed Certificate" on page 154

## Cannot Create a CSR

**The Common Name has not been entered.**

The **Common Name** must be entered.

**Unsupported characters have been entered to Common Name, Organization, Organizational Unit, Locality, and State/Province.**

Enter characters of either IPv4, IPv6, host name, or FQDN format in ASCII (0x20-0x7E).

**A comma or space is included in the Common Name.**

If a comma is entered, the **Common Name** is divided at that point. If only a space is entered before or after a comma, an error occurs.
